characteristic of C- type lectins, a 26- amino acid transmembrane domain, and a 7- amino acid cytoplasmic domain. CD94 is classified as a type II membrane protein because it has an external C terminus. The amino acid sequence of CD94 is 27 to 32% identical to those of NKG2 family members NKG2A, NKG2C (KLRC2; 602891), NKG2D (OMIM Ref. No. 602893), and NKG2E (KLRC3; 602892). Chang et al. (1995) stated that the virtual absence of a cytoplasmic domain implies that CD94 function requires association with other receptors. Lazetic et al. (1996) demonstrated that CD94 forms disulfide- bonded heterodimers with NKG2A, NKG2C, and NKG2E. Rodriguez et al. (1998) reported that the CD94 gene contains 6 exons. Using S1 nuclease protection and primer extension assays, they found that transcription initiation in CD94 is heterogeneous, but is restricted to a 60- bp region around the major initiation site. Chang et al. (1995) mapped the CD94 gene to chromosome 12 using a somatic cell hybrid panel. By analysis of a cosmid contig, Plougastel and Trowsdale (1998) found that the CD94 gene is located at 12p13.2- p12.3, within the NK complex, a cluster of C- type lectin genes preferentially expressed in NK cells.

[29387]

[29388] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[29389] Plougastel, B.; Trowsdale, J. : Sequence analysis of a 62- kb region overlapping the human KLRC cluster of genes. Genomics 49: 193- 199, 1998. ; and

[29390] Rodriguez, A.; Carretero, M.; Glienke, J.; Bellon, T.; Ramirez, A.; Lehrach, H.; Francis, F.; Lopez- Botet, M. : Structure of the human CD94 C- type lectin gene. Immunogenetics 47: 305- 309.

[29391] Further studies establishing the function and utilities of KLRD1 are found in John Hopkins OMIM database record ID 602894, and in cited publications listed in Table 5, which are hereby incorporated by reference.Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NP_003670.1) is another GAM189 target gene, herein designated TARGET GENE. KMO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KMO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KMO BINDING SITE,

designated SEQ ID:6338, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29392] Another function of GAM189 is therefore inhibition of Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NP_003670.1), a gene which may play a role in encephalic photoreception. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KMO.

[29393] The function of KMO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) is another GAM189 target gene, herein designated TARGET GENE. LAMP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LAMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMP3 BINDING SITE, designated SEQ ID:17760, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA,

also designated SEQ ID:246.

[29394] Another function of GAM189 is therefore inhibition of Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP3.

[29395] Leucyl-trna synthetase (LARS, Accession NP_064502.8) is another GAM189 target gene, herein designated TARGET GENE. LARS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LARS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LARS BINDING SITE, designated SEQ ID:2620, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29396] Another function of GAM189 is therefore inhibition of Leucyl-trna synthetase (LARS, Accession NP_064502.8) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LARS.

[29397] Lim and sh3 protein 1 (LASP1, Accession NP_006139.1) is another GAM189 target gene, herein designated TARGET

GENE. LASP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LASP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LASP1 BINDING SITE, designated SEQ ID:17709, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29398] Another function of GAM189 is therefore inhibition of Lim and sh3 protein 1 (LASP1, Accession NP_006139.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LASP1.

[29399] Lipocalin 7 (LCN7, Accession NP_071447.1) is another GAM189 target gene, herein designated TARGET GENE. LCN7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LCN7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LCN7 BINDING SITE, designated SEQ ID:15937, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29400] Another function of GAM189 is therefore inhibition of Lipocalin 7 (LCN7, Accession NP_071447.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LCN7.

[29401] Leucine zipper-ef-hand containing transmembrane protein 1 (LETM1, Accession NP_036450.1) is another GAM189 target gene, herein designated TARGET GENE. LETM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LETM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LETM1 BINDING SITE, designated SEQ ID:18695, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29402] Another function of GAM189 is therefore inhibition of Leucine zipper-ef-hand containing transmembrane protein 1 (LETM1, Accession NP_036450.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LETM1.

[29403] LGP2 (Accession NP_077024.1) is another GAM189 target

gene, herein designated TARGET GENE. LGP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LGP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LGP2 BINDING SITE, designated SEQ ID:8032, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29404] Another function of GAM189 is therefore inhibition of LGP2 (Accession NP_077024.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGP2.

[29405] Lim homeobox protein 2 (LHX2, Accession NP_004780.3) is another GAM189 target gene, herein designated TARGET GENE. LHX2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LHX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LHX2 BINDING SITE, designated SEQ ID:4178, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29406] Another function of GAM189 is therefore inhibition of Lim homeobox protein 2 (LHX2, Accession NP_004780.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LHX2.

[29407] LIN-28 (Accession NP_078950.1) is another GAM189 target gene, herein designated TARGET GENE. LIN-28 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LIN-28, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIN-28 BINDING SITE, designated SEQ ID:4726, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29408] Another function of GAM189 is therefore inhibition of LIN-28 (Accession NP_078950.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIN-28.

[29409] Link-GEFII (Accession NP_057423.1) is another GAM189 target gene, herein designated TARGET GENE. Link-GEFII BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Link-GEFII, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Link-GEFII BINDING SITE, designated SEQ ID:19936, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29410] Another function of GAM189 is therefore inhibition of Link-GEFII (Accession NP_057423.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Link-GEFII.

[29411] Lipase, member h (LIPH, Accession NP_640341.1) is another GAM189 target gene, herein designated TARGET GENE. LIPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LIPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIPH BINDING SITE, designated SEQ ID:10379, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29412] Another function of GAM189 is therefore inhibition of Lipase, member h (LIPH, Accession NP_640341.1) . Accord-

ingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIPH.

[29413] Lethal giant larvae homolog 2 (drosophila) (LLGL2, Accession NP_004515.1) is another GAM189 target gene, herein designated TARGET GENE. LLGL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LLGL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LLGL2 BINDING SITE, designated SEQ ID:15172, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29414] Another function of GAM189 is therefore inhibition of Lethal giant larvae homolog 2 (drosophila) (LLGL2, Accession NP_004515.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LLGL2.

[29415] LNK (Accession NP_005466.1) is another GAM189 target gene, herein designated TARGET GENE. LNK BINDING SITE1 and LNK BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LNK,

corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LNK BINDING SITE1 and LNK BINDING SITE2, designated SEQ ID:13992 and SEQ ID:1866 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29416] Another function of GAM189 is therefore inhibition of LNK (Accession NP_005466.1), a gene which links T- cell receptor activation signal to phospholipase c- gamma- 1, grb- 2 and phosphatidylinositol 3- kinase (by similarity). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LNK.

[29417] The function of LNK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.LOC112687 (Accession XP_053145.1) is another GAM189 target gene, herein designated TARGET GENE. LOC112687 BINDING SITE1 through LOC112687 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC112687, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112687 BINDING SITE1 through LOC112687 BINDING SITE3, designated SEQ ID:16673, SEQ ID:793 and SEQ ID:7988 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29418] Another function of GAM189 is therefore inhibition of LOC112687 (Accession XP_053145.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112687.

[29419] LOC112817 (Accession NP_612422.2) is another GAM189 target gene, herein designated TARGET GENE. LOC112817 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC112817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112817 BINDING SITE, designated SEQ ID:16256, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29420] Another function of GAM189 is therefore inhibition of

LOC112817 (Accession NP_612422.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112817.

[29421] LOC113444 (Accession NP_612437.2) is another GAM189 target gene, herein designated TARGET GENE. LOC113444 BINDING SITE1 through LOC113444 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC113444, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC113444 BINDING SITE1 through LOC113444 BINDING SITE3, designated SEQ ID:18294, SEQ ID:5336 and SEQ ID:15899 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29422] Another function of GAM189 is therefore inhibition of LOC113444 (Accession NP_612437.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113444.

[29423] LOC113828 (Accession NP_612444.1) is another GAM189 target gene, herein designated TARGET GENE. LOC113828

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC113828, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC113828 BINDING SITE, designated SEQ ID:5632, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29424] Another function of GAM189 is therefore inhibition of LOC113828 (Accession NP_612444.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113828.

[29425] LOC115123 (Accession XP_055276.1) is another GAM189 target gene, herein designated TARGET GENE. LOC115123 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC115123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115123 BINDING SITE, designated SEQ ID:15271, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29426] Another function of GAM189 is therefore inhibition of LOC115123 (Accession XP_055276.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115123.

[29427] LOC115219 (Accession XP_055499.2) is another GAM189 target gene, herein designated TARGET GENE. LOC115219 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC115219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115219 BINDING SITE, designated SEQ ID:12422, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29428] Another function of GAM189 is therefore inhibition of LOC115219 (Accession XP_055499.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115219.

[29429] LOC115648 (Accession NP_663299.1) is another GAM189 target gene, herein designated TARGET GENE. LOC115648 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC115648, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115648 BINDING SITE, designated SEQ ID:7429, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29430] Another function of GAM189 is therefore inhibition of LOC115648 (Accession NP_663299.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115648.

[29431] LOC116411 (Accession XP_058095.1) is another GAM189 target gene, herein designated TARGET GENE. LOC116411 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC116411, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116411 BINDING SITE, designated SEQ ID:14720, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29432] Another function of GAM189 is therefore inhibition of

LOC116411 (Accession XP_058095.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116411.

[29433] LOC118490 (Accession XP_060981.3) is another GAM189 target gene, herein designated TARGET GENE. LOC118490 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC118490, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118490 BINDING SITE, designated SEQ ID:456, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29434] Another function of GAM189 is therefore inhibition of LOC118490 (Accession XP_060981.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118490.

[29435] LOC118812 (Accession NP_849154.1) is another GAM189 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded

by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:2649, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29436] Another function of GAM189 is therefore inhibition of LOC118812 (Accession NP_849154.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[29437] LOC118812 (Accession XP_058346.2) is another GAM189 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:2649, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29438] Another function of GAM189 is therefore inhibition of LOC118812 (Accession XP_058346.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[29439] LOC119395 (Accession XP_061446.3) is another GAM189 target gene, herein designated TARGET GENE. LOC119395 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC119395, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC119395 BINDING SITE, designated SEQ ID:745, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29440] Another function of GAM189 is therefore inhibition of LOC119395 (Accession XP_061446.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC119395.

[29441] LOC120526 (Accession XP_058475.1) is another GAM189 target gene, herein designated TARGET GENE. LOC120526 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC120526, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC120526 BINDING SITE, designated SEQ ID:17112, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29442] Another function of GAM189 is therefore inhibition of LOC120526 (Accession XP_058475.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC120526.

[29443] LOC121952 (Accession XP_062872.2) is another GAM189 target gene, herein designated TARGET GENE. LOC121952 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC121952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121952 BINDING SITE, designated SEQ ID:9891, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29444] Another function of GAM189 is therefore inhibition of

LOC121952 (Accession XP_062872.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121952.

[29445] LOC124221 (Accession XP_058785.3) is another GAM189 target gene, herein designated TARGET GENE. LOC124221 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC124221, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC124221 BINDING SITE, designated SEQ ID:14576, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29446] Another function of GAM189 is therefore inhibition of LOC124221 (Accession XP_058785.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124221.

[29447] LOC125061 (Accession XP_058889.3) is another GAM189 target gene, herein designated TARGET GENE. LOC125061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC125061, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC125061 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29448] Another function of GAM189 is therefore inhibition of LOC125061 (Accession XP_058889.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC125061.

[29449] LOC126669 (Accession XP_060121.4) is another GAM189 target gene, herein designated TARGET GENE. LOC126669 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC126669, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126669 BINDING SITE, designated SEQ ID:3477, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29450] Another function of GAM189 is therefore inhibition of LOC126669 (Accession XP_060121.4) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126669.

[29451] LOC127253 (Accession XP_059122.1) is another GAM189 target gene, herein designated TARGET GENE. LOC127253 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC127253, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC127253 BINDING SITE, designated SEQ ID:18918, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29452] Another function of GAM189 is therefore inhibition of LOC127253 (Accession XP_059122.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127253.

[29453] LOC127841 (Accession XP_059184.1) is another GAM189 target gene, herein designated TARGET GENE. LOC127841 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC127841, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC127841 BINDING SITE, designated SEQ ID:18516, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29454] Another function of GAM189 is therefore inhibition of LOC127841 (Accession XP_059184.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127841.

[29455] LOC128387 (Accession XP_059243.2) is another GAM189 target gene, herein designated TARGET GENE. LOC128387 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC128387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC128387 BINDING SITE, designated SEQ ID:15173, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29456] Another function of GAM189 is therefore inhibition of LOC128387 (Accession XP_059243.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC128387.

[29457] LOC132241 (Accession XP_059583.1) is another GAM189 target gene, herein designated TARGET GENE. LOC132241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC132241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC132241 BINDING SITE, designated SEQ ID:509, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29458] Another function of GAM189 is therefore inhibition of LOC132241 (Accession XP_059583.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC132241.

[29459] LOC135293 (Accession XP_072402.4) is another GAM189 target gene, herein designated TARGET GENE. LOC135293 BINDING SITE1 and LOC135293 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC135293, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135293 BINDING SITE1 and LOC135293 BINDING SITE2, designated SEQ ID:3512 and SEQ ID:10443 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29460] Another function of GAM189 is therefore inhibition of LOC135293 (Accession XP_072402.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135293.

[29461] LOC135763 (Accession NP_612639.1) is another GAM189 target gene, herein designated TARGET GENE. LOC135763 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135763, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135763 BINDING SITE, designated SEQ ID:17207, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29462] Another function of GAM189 is therefore inhibition of LOC135763 (Accession NP_612639.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135763.

[29463] LOC135818 (Accession XP_059804.4) is another GAM189 target gene, herein designated TARGET GENE. LOC135818 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135818 BINDING SITE, designated SEQ ID:19136, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29464] Another function of GAM189 is therefore inhibition of LOC135818 (Accession XP_059804.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135818.

[29465] LOC137886 (Accession XP_059929.3) is another GAM189 target gene, herein designated TARGET GENE. LOC137886 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC137886, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC137886 BINDING SITE, designated SEQ ID:19990, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29466] Another function of GAM189 is therefore inhibition of LOC137886 (Accession XP_059929.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC137886.

[29467] LOC139422 (Accession XP_066687.2) is another GAM189 target gene, herein designated TARGET GENE. LOC139422 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC139422, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139422 BINDING SITE, designated SEQ ID:9489, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29468] Another function of GAM189 is therefore inhibition of LOC139422 (Accession XP_066687.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC139422.

[29469] LOC143241 (Accession NP_620167.1) is another GAM189 target gene, herein designated TARGET GENE. LOC143241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC143241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143241 BINDING SITE, designated SEQ ID:15574, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29470] Another function of GAM189 is therefore inhibition of LOC143241 (Accession NP_620167.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143241.

[29471] LOC144248 (Accession XP_084786.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144248 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC144248 BINDING SITE, designated SEQ ID:3159, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29472] Another function of GAM189 is therefore inhibition of LOC144248 (Accession XP_084786.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144248.

[29473] LOC144266 (Accession XP_084795.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144266 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144266 BINDING SITE, designated SEQ ID:17498, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29474] Another function of GAM189 is therefore inhibition of LOC144266 (Accession XP_084795.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC144266.

[29475] LOC144404 (Accession XP_084852.6) is another GAM189 target gene, herein designated TARGET GENE. LOC144404 BINDING SITE1 through LOC144404 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC144404, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144404 BINDING SITE1 through LOC144404 BINDING SITE3, designated SEQ ID:5897, SEQ ID:1633 and SEQ ID:15352 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29476] Another function of GAM189 is therefore inhibition of LOC144404 (Accession XP_084852.6) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144404.

[29477] LOC144467 (Accession NP_612482.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144467 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144467, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144467 BINDING SITE, designated SEQ ID:5733, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29478] Another function of GAM189 is therefore inhibition of LOC144467 (Accession NP_612482.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144467.

[29479] LOC144481 (Accession XP_096611.2) is another GAM189 target gene, herein designated TARGET GENE. LOC144481 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144481, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144481 BINDING SITE, designated SEQ ID:19220, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29480] Another function of GAM189 is therefore inhibition of LOC144481 (Accession XP_096611.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC144481.

[29481] LOC144667 (Accession XP_096648.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144667 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144667, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144667 BINDING SITE, designated SEQ ID:12712, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29482] Another function of GAM189 is therefore inhibition of LOC144667 (Accession XP_096648.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144667.

[29483] LOC144742 (Accession XP_084949.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144742 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144742, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC144742 BINDING SITE, designated SEQ ID:17736, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29484] Another function of GAM189 is therefore inhibition of LOC144742 (Accession XP_084949.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144742.

[29485] LOC144766 (Accession XP_084963.2) is another GAM189 target gene, herein designated TARGET GENE. LOC144766 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144766, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144766 BINDING SITE, designated SEQ ID:8972, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29486] Another function of GAM189 is therefore inhibition of LOC144766 (Accession XP_084963.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC144766.

[29487] LOC144776 (Accession XP_084964.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144776 BINDING SITE1 and LOC144776 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC144776, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144776 BINDING SITE1 and LOC144776 BINDING SITE2, designated SEQ ID:444 and SEQ ID:16275 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29488] Another function of GAM189 is therefore inhibition of LOC144776 (Accession XP_084964.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144776.

[29489] LOC144817 (Accession XP_084972.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144817 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144817, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144817 BINDING SITE, designated SEQ ID:12065, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29490] Another function of GAM189 is therefore inhibition of LOC144817 (Accession XP_084972.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144817.

[29491] LOC144962 (Accession XP_084990.1) is another GAM189 target gene, herein designated TARGET GENE. LOC144962 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144962, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144962 BINDING SITE, designated SEQ ID:12130, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29492] Another function of GAM189 is therefore inhibition of LOC144962 (Accession XP_084990.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC144962.

[29493] LOC145098 (Accession XP_085022.1) is another GAM189 target gene, herein designated TARGET GENE. LOC145098 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145098, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145098 BINDING SITE, designated SEQ ID:675, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29494] Another function of GAM189 is therefore inhibition of LOC145098 (Accession XP_085022.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145098.

[29495] LOC145231 (Accession XP_096740.1) is another GAM189 target gene, herein designated TARGET GENE. LOC145231 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC145231 BINDING SITE, designated SEQ ID:6417, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29496] Another function of GAM189 is therefore inhibition of LOC145231 (Accession XP_096740.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145231.

[29497] LOC145268 (Accession XP_085072.1) is another GAM189 target gene, herein designated TARGET GENE. LOC145268 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145268, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145268 BINDING SITE, designated SEQ ID:18805, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29498] Another function of GAM189 is therefore inhibition of LOC145268 (Accession XP_085072.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC145268.

[29499] LOC145725 (Accession XP_085211.1) is another GAM189 target gene, herein designated TARGET GENE. LOC145725 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145725 BINDING SITE, designated SEQ ID:4773, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29500] Another function of GAM189 is therefore inhibition of LOC145725 (Accession XP_085211.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145725.

[29501] LOC145757 (Accession XP_085227.1) is another GAM189 target gene, herein designated TARGET GENE. LOC145757 BINDING SITE1 and LOC145757 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC145757, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC145757 BINDING SITE1 and LOC145757 BINDING SITE2, designated SEQ ID:11523 and SEQ ID:7370 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29502] Another function of GAM189 is therefore inhibition of LOC145757 (Accession XP_085227.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145757.

[29503] LOC145783 (Accession XP_085231.2) is another GAM189 target gene, herein designated TARGET GENE. LOC145783 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145783, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145783 BINDING SITE, designated SEQ ID:2196, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29504] Another function of GAM189 is therefore inhibition of LOC145783 (Accession XP_085231.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC145783.

[29505] LOC145813 (Accession XP_096873.1) is another GAM189 target gene, herein designated TARGET GENE. LOC145813 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145813 BINDING SITE, designated SEQ ID:16256, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29506] Another function of GAM189 is therefore inhibition of LOC145813 (Accession XP_096873.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145813.

[29507] LOC145988 (Accession XP_085290.3) is another GAM189 target gene, herein designated TARGET GENE. LOC145988 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145988, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC145988 BINDING SITE, designated SEQ ID:11009, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29508] Another function of GAM189 is therefore inhibition of LOC145988 (Accession XP_085290.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145988.

[29509] LOC146177 (Accession NP_778229.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146177 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146177 BINDING SITE, designated SEQ ID:16175, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29510] Another function of GAM189 is therefore inhibition of LOC146177 (Accession NP_778229.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC146177.

[29511] LOC146229 (Accession XP_085387.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146229 BINDING SITE1 through LOC146229 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC146229, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146229 BINDING SITE1 through LOC146229 BINDING SITE4, designated SEQ ID:8706, SEQ ID:5672, SEQ ID:5551 and SEQ ID:1644 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29512] Another function of GAM189 is therefore inhibition of LOC146229 (Accession XP_085387.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146229.

[29513] LOC146346 (Accession XP_085430.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146346 BINDING SITE1 and LOC146346 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by LOC146346, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146346 BINDING SITE1 and LOC146346 BINDING SITE2, designated SEQ ID:17670 and SEQ ID:5798 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29514] Another function of GAM189 is therefore inhibition of LOC146346 (Accession XP_085430.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146346.

[29515] LOC146429 (Accession XP_096998.2) is another GAM189 target gene, herein designated TARGET GENE. LOC146429 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146429, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146429 BINDING SITE, designated SEQ ID:2457, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29516] Another function of GAM189 is therefore inhibition of LOC146429 (Accession XP_096998.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146429.

[29517] LOC146443 (Accession XP_085461.6) is another GAM189 target gene, herein designated TARGET GENE. LOC146443 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146443, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146443 BINDING SITE, designated SEQ ID:813, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29518] Another function of GAM189 is therefore inhibition of LOC146443 (Accession XP_085461.6) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146443.

[29519] LOC146475 (Accession XP_097006.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146475 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC146475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146475 BINDING SITE, designated SEQ ID:9246, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29520] Another function of GAM189 is therefore inhibition of LOC146475 (Accession XP_097006.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146475.

[29521] LOC146513 (Accession XP_097013.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146513 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146513, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146513 BINDING SITE, designated SEQ ID:3374, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29522] Another function of GAM189 is therefore inhibition of

LOC146513 (Accession XP_097013.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146513.

[29523] LOC146603 (Accession XP_085514.2) is another GAM189 target gene, herein designated TARGET GENE. LOC146603 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146603 BINDING SITE, designated SEQ ID:7382, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29524] Another function of GAM189 is therefore inhibition of LOC146603 (Accession XP_085514.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146603.

[29525] LOC146784 (Accession XP_085588.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146784 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146784, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146784 BINDING SITE, designated SEQ ID:13448, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29526] Another function of GAM189 is therefore inhibition of LOC146784 (Accession XP_085588.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146784.

[29527] LOC146839 (Accession XP_097107.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146839 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146839, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146839 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29528] Another function of GAM189 is therefore inhibition of LOC146839 (Accession XP_097107.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146839.

[29529] LOC146894 (Accession NP_660316.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146894 BINDING SITE, designated SEQ ID:8315, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29530] Another function of GAM189 is therefore inhibition of LOC146894 (Accession NP_660316.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146894.

[29531] LOC146895 (Accession XP_097120.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146895 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146895, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146895 BINDING SITE, designated SEQ ID:8232, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29532] Another function of GAM189 is therefore inhibition of LOC146895 (Accession XP_097120.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146895.

[29533] LOC146901 (Accession XP_097121.1) is another GAM189 target gene, herein designated TARGET GENE. LOC146901 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146901, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146901 BINDING SITE, designated SEQ ID:6392, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29534] Another function of GAM189 is therefore inhibition of LOC146901 (Accession XP_097121.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC146901.

[29535] LOC146909 (Accession XP_085634.2) is another GAM189 target gene, herein designated TARGET GENE. LOC146909 BINDING SITE1 and LOC146909 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC146909, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146909 BINDING SITE1 and LOC146909 BINDING SITE2, designated SEQ ID:19550 and SEQ ID:9492 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29536] Another function of GAM189 is therefore inhibition of LOC146909 (Accession XP_085634.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146909.

[29537] LOC147071 (Accession XP_054031.5) is another GAM189 target gene, herein designated TARGET GENE. LOC147071 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC147071, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147071 BINDING SITE, designated SEQ ID:16699, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29538] Another function of GAM189 is therefore inhibition of LOC147071 (Accession XP_054031.5) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147071.

[29539] LOC147080 (Accession XP_097182.1) is another GAM189 target gene, herein designated TARGET GENE. LOC147080 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC147080, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147080 BINDING SITE, designated SEQ ID:12558, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29540] Another function of GAM189 is therefore inhibition of LOC147080 (Accession XP_097182.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147080.

[29541] LOC147166 (Accession XP_085722.2) is another GAM189 target gene, herein designated TARGET GENE. LOC147166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147166 BINDING SITE, designated SEQ ID:10618, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29542] Another function of GAM189 is therefore inhibition of LOC147166 (Accession XP_085722.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147166.

[29543] LOC147381 (Accession XP_097230.2) is another GAM189 target gene, herein designated TARGET GENE. LOC147381 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147381, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147381 BINDING SITE, designated SEQ ID:19915, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29544] Another function of GAM189 is therefore inhibition of LOC147381 (Accession XP_097230.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147381.

[29545] LOC147407 (Accession XP_084000.1) is another GAM189 target gene, herein designated TARGET GENE. LOC147407 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147407, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147407 BINDING SITE, designated SEQ ID:12065, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29546] Another function of GAM189 is therefore inhibition of LOC147407 (Accession XP_084000.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC147407.

[29547] LOC147817 (Accession XP_085903.1) is another GAM189 target gene, herein designated TARGET GENE. LOC147817 BINDING SITE1 and LOC147817 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147817, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147817 BINDING SITE1 and LOC147817 BINDING SITE2, designated SEQ ID:1634 and SEQ ID:19233 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29548] Another function of GAM189 is therefore inhibition of LOC147817 (Accession XP_085903.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147817.

[29549] LOC147841 (Accession XP_085924.2) is another GAM189 target gene, herein designated TARGET GENE. LOC147841 BINDING SITE1 and LOC147841 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by LOC147841, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147841 BINDING SITE1 and LOC147841 BINDING SITE2, designated SEQ ID:12065 and SEQ ID:8642 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29550] Another function of GAM189 is therefore inhibition of LOC147841 (Accession XP_085924.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147841.

[29551] LOC147947 (Accession XP_085974.1) is another GAM189 target gene, herein designated TARGET GENE. LOC147947 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147947, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147947 BINDING SITE, designated SEQ ID:17952, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29552] Another function of GAM189 is therefore inhibition of LOC147947 (Accession XP_085974.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147947.

[29553] LOC148137 (Accession NP_653293.1) is another GAM189 target gene, herein designated TARGET GENE. LOC148137 BINDING SITE1 and LOC148137 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC148137, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148137 BINDING SITE1 and LOC148137 BINDING SITE2, designated SEQ ID:5784 and SEQ ID:17935 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29554] Another function of GAM189 is therefore inhibition of LOC148137 (Accession NP_653293.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148137.

[29555] LOC148198 (Accession XP_047554.4) is another GAM189

target gene, herein designated TARGET GENE. LOC148198 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148198, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148198 BINDING SITE, designated SEQ ID:11563, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29556] Another function of GAM189 is therefore inhibition of LOC148198 (Accession XP_047554.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148198.

[29557] LOC148708 (Accession XP_086286.4) is another GAM189 target gene, herein designated TARGET GENE. LOC148708 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148708 BINDING SITE, designated SEQ ID:15671, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29558] Another function of GAM189 is therefore inhibition of LOC148708 (Accession XP_086286.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148708.

[29559] LOC148709 (Accession XP_086281.1) is another GAM189 target gene, herein designated TARGET GENE. LOC148709 BINDING SITE1 and LOC148709 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC148709, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148709 BINDING SITE1 and LOC148709 BINDING SITE2, designated SEQ ID:9201 and SEQ ID:6922 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29560] Another function of GAM189 is therefore inhibition of LOC148709 (Accession XP_086281.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148709.

[29561] LOC149149 (Accession XP_097598.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149149 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149149 BINDING SITE, designated SEQ ID:2184, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29562] Another function of GAM189 is therefore inhibition of LOC149149 (Accession XP_097598.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149149.

[29563] LOC149194 (Accession XP_086458.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149194 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149194 BINDING SITE, designated SEQ ID:12637, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29564] Another function of GAM189 is therefore inhibition of LOC149194 (Accession XP_086458.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149194.

[29565] LOC149371 (Accession NP_787072.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149371 BINDING SITE, designated SEQ ID:13354, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29566] Another function of GAM189 is therefore inhibition of LOC149371 (Accession NP_787072.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149371.

[29567] LOC149466 (Accession XP_086546.1) is another GAM189

target gene, herein designated TARGET GENE. LOC149466 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149466, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149466 BINDING SITE, designated SEQ ID:16260, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29568] Another function of GAM189 is therefore inhibition of LOC149466 (Accession XP_086546.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149466.

[29569] LOC149478 (Accession XP_086536.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149478 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149478 BINDING SITE, designated SEQ ID:5016, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29570] Another function of GAM189 is therefore inhibition of LOC149478 (Accession XP_086536.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149478.

[29571] LOC149506 (Accession XP_097661.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149506 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149506, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149506 BINDING SITE, designated SEQ ID:2139, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29572] Another function of GAM189 is therefore inhibition of LOC149506 (Accession XP_097661.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149506.

[29573] LOC149606 (Accession XP_086600.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149606 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149606 BINDING SITE, designated SEQ ID:8887, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29574] Another function of GAM189 is therefore inhibition of LOC149606 (Accession XP_086600.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149606.

[29575] LOC149692 (Accession XP_097706.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149692 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC149692, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149692 BINDING SITE, designated SEQ ID:11025, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29576] Another function of GAM189 is therefore inhibition of LOC149692 (Accession XP_097706.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149692.

[29577] LOC149703 (Accession XP_097719.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149703 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149703, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149703 BINDING SITE, designated SEQ ID:10508, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29578] Another function of GAM189 is therefore inhibition of

LOC149703 (Accession XP_097719.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149703.

[29579] LOC149832 (Accession XP_097733.1) is another GAM189 target gene, herein designated TARGET GENE. LOC149832 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149832, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149832 BINDING SITE, designated SEQ ID:17917, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29580] Another function of GAM189 is therefore inhibition of LOC149832 (Accession XP_097733.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149832.

[29581] LOC150054 (Accession XP_097797.1) is another GAM189 target gene, herein designated TARGET GENE. LOC150054 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150054, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150054 BINDING SITE, designated SEQ ID:5157, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29582] Another function of GAM189 is therefore inhibition of LOC150054 (Accession XP_097797.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150054.

[29583] LOC150225 (Accession XP_097870.1) is another GAM189 target gene, herein designated TARGET GENE. LOC150225 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150225 BINDING SITE, designated SEQ ID:7207, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29584] Another function of GAM189 is therefore inhibition of LOC150225 (Accession XP_097870.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150225.

[29585] LOC150384 (Accession XP_097894.1) is another GAM189 target gene, herein designated TARGET GENE. LOC150384 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150384, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150384 BINDING SITE, designated SEQ ID:7485, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29586] Another function of GAM189 is therefore inhibition of LOC150384 (Accession XP_097894.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150384.

[29587] LOC150397 (Accession XP_086907.1) is another GAM189 target gene, herein designated TARGET GENE. LOC150397 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150397, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150397 BINDING SITE, designated SEQ ID:19467, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29588] Another function of GAM189 is therefore inhibition of LOC150397 (Accession XP_086907.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150397.

[29589] LOC150587 (Accession XP_097917.1) is another GAM189 target gene, herein designated TARGET GENE. LOC150587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150587 BINDING SITE, designated SEQ ID:16940, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29590] Another function of GAM189 is therefore inhibition of LOC150587 (Accession XP_097917.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC150587.

[29591] LOC151057 (Accession XP_097998.1) is another GAM189 target gene, herein designated TARGET GENE. LOC151057 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151057, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151057 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29592] Another function of GAM189 is therefore inhibition of LOC151057 (Accession XP_097998.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151057.

[29593] LOC151196 (Accession XP_098019.1) is another GAM189 target gene, herein designated TARGET GENE. LOC151196 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151196, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC151196 BINDING SITE, designated SEQ ID:19774, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29594] Another function of GAM189 is therefore inhibition of LOC151196 (Accession XP_098019.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151196.

[29595] LOC151201 (Accession XP_098021.1) is another GAM189 target gene, herein designated TARGET GENE. LOC151201 BINDING SITE1 and LOC151201 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC151201, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151201 BINDING SITE1 and LOC151201 BINDING SITE2, designated SEQ ID:2572 and SEQ ID:12725 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29596] Another function of GAM189 is therefore inhibition of LOC151201 (Accession XP_098021.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151201.

[29597] LOC151475 (Accession XP_098063.1) is another GAM189 target gene, herein designated TARGET GENE. LOC151475 BINDING SITE1 and LOC151475 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC151475, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151475 BINDING SITE1 and LOC151475 BINDING SITE2, designated SEQ ID:4174 and SEQ ID:4371 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29598] Another function of GAM189 is therefore inhibition of LOC151475 (Accession XP_098063.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151475.

[29599] LOC151610 (Accession XP_087245.1) is another GAM189 target gene, herein designated TARGET GENE. LOC151610 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC151610, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151610 BINDING SITE, designated SEQ ID:2599, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29600] Another function of GAM189 is therefore inhibition of LOC151610 (Accession XP_087245.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151610.

[29601] LOC151636 (Accession NP_612144.1) is another GAM189 target gene, herein designated TARGET GENE. LOC151636 BINDING SITE1 through LOC151636 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC151636, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151636 BINDING SITE1 through LOC151636 BINDING SITE3, designated SEQ ID:4151, SEQ ID:14731 and SEQ ID:2693 respectively, to the nucleotide sequence of GAM189 RNA,

herein designated GAM RNA, also designated SEQ ID:246.

[29602] Another function of GAM189 is therefore inhibition of LOC151636 (Accession NP_612144.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151636.

[29603] LOC151657 (Accession XP_098100.2) is another GAM189 target gene, herein designated TARGET GENE. LOC151657 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151657, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151657 BINDING SITE, designated SEQ ID:4248, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29604] Another function of GAM189 is therefore inhibition of LOC151657 (Accession XP_098100.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151657.

[29605] LOC151877 (Accession XP_098132.1) is another GAM189 target gene, herein designated TARGET GENE. LOC151877

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151877, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151877 BINDING SITE, designated SEQ ID:4677, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29606] Another function of GAM189 is therefore inhibition of LOC151877 (Accession XP_098132.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151877.

[29607] LOC152245 (Accession XP_098182.1) is another GAM189 target gene, herein designated TARGET GENE. LOC152245 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152245, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152245 BINDING SITE, designated SEQ ID:9470, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29608] Another function of GAM189 is therefore inhibition of LOC152245 (Accession XP_098182.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152245.

[29609] LOC152445 (Accession XP_098231.1) is another GAM189 target gene, herein designated TARGET GENE. LOC152445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152445 BINDING SITE, designated SEQ ID:2922, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29610] Another function of GAM189 is therefore inhibition of LOC152445 (Accession XP_098231.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152445.

[29611] LOC152620 (Accession XP_011108.2) is another GAM189 target gene, herein designated TARGET GENE. LOC152620 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC152620, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152620 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29612] Another function of GAM189 is therefore inhibition of LOC152620 (Accession XP_011108.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152620.

[29613] LOC152719 (Accession XP_098257.1) is another GAM189 target gene, herein designated TARGET GENE. LOC152719 BINDING SITE1 and LOC152719 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC152719, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152719 BINDING SITE1 and LOC152719 BINDING SITE2, designated SEQ ID:17637 and SEQ ID:11919 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA,

also designated SEQ ID:246.

[29614] Another function of GAM189 is therefore inhibition of LOC152719 (Accession XP_098257.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152719.

[29615] LOC152794 (Accession XP_087525.1) is another GAM189 target gene, herein designated TARGET GENE. LOC152794 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152794, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152794 BINDING SITE, designated SEQ ID:2010, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29616] Another function of GAM189 is therefore inhibition of LOC152794 (Accession XP_087525.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152794.

[29617] LOC152804 (Accession XP_098266.2) is another GAM189 target gene, herein designated TARGET GENE. LOC152804

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152804, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152804 BINDING SITE, designated SEQ ID:9568, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29618] Another function of GAM189 is therefore inhibition of LOC152804 (Accession XP_098266.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152804.

[29619] LOC153077 (Accession XP_098307.1) is another GAM189 target gene, herein designated TARGET GENE. LOC153077 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC153077, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153077 BINDING SITE, designated SEQ ID:5304, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29620] Another function of GAM189 is therefore inhibition of LOC153077 (Accession XP_098307.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153077.

[29621] LOC153811 (Accession XP_087779.2) is another GAM189 target gene, herein designated TARGET GENE. LOC153811 BINDING SITE1 through LOC153811 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC153811, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153811 BINDING SITE1 through LOC153811 BINDING SITE3, designated SEQ ID:9683, SEQ ID:17512 and SEQ ID:19665 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29622] Another function of GAM189 is therefore inhibition of LOC153811 (Accession XP_087779.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153811.

[29623] LOC153883 (Accession XP_087798.1) is another GAM189

target gene, herein designated TARGET GENE. LOC153883 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC153883, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153883 BINDING SITE, designated SEQ ID:15929, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29624] Another function of GAM189 is therefore inhibition of LOC153883 (Accession XP_087798.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153883.

[29625] LOC153910 (Accession XP_087801.1) is another GAM189 target gene, herein designated TARGET GENE. LOC153910 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC153910, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153910 BINDING SITE, designated SEQ ID:2882, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29626] Another function of GAM189 is therefore inhibition of LOC153910 (Accession XP_087801.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153910.

[29627] LOC154282 (Accession XP_098505.1) is another GAM189 target gene, herein designated TARGET GENE. LOC154282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154282 BINDING SITE, designated SEQ ID:4307, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29628] Another function of GAM189 is therefore inhibition of LOC154282 (Accession XP_098505.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154282.

[29629] LOC154822 (Accession XP_098618.3) is another GAM189 target gene, herein designated TARGET GENE. LOC154822

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154822 BINDING SITE, designated SEQ ID:19205, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29630] Another function of GAM189 is therefore inhibition of LOC154822 (Accession XP_098618.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154822.

[29631] LOC154877 (Accession XP_098626.1) is another GAM189 target gene, herein designated TARGET GENE. LOC154877 BINDING SITE1 through LOC154877 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC154877, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE1 through LOC154877 BINDING SITE3, designated SEQ ID:17731, SEQ ID:3200 and SEQ ID:16089 re-

spectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29632] Another function of GAM189 is therefore inhibition of LOC154877 (Accession XP_098626.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877.

[29633] LOC155066 (Accession XP_088142.4) is another GAM189 target gene, herein designated TARGET GENE. LOC155066 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC155066, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155066 BINDING SITE, designated SEQ ID:17980, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29634] Another function of GAM189 is therefore inhibition of LOC155066 (Accession XP_088142.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155066.

[29635] LOC158014 (Accession XP_088442.1) is another GAM189

target gene, herein designated TARGET GENE. LOC158014 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158014, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158014 BINDING SITE, designated SEQ ID:2542, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29636] Another function of GAM189 is therefore inhibition of LOC158014 (Accession XP_088442.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158014.

[29637] LOC158228 (Accession XP_098903.4) is another GAM189 target gene, herein designated TARGET GENE. LOC158228 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158228 BINDING SITE, designated SEQ ID:5779, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29638] Another function of GAM189 is therefore inhibition of LOC158228 (Accession XP_098903.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158228.

[29639] LOC158310 (Accession XP_098919.1) is another GAM189 target gene, herein designated TARGET GENE. LOC158310 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158310, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158310 BINDING SITE, designated SEQ ID:14859, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29640] Another function of GAM189 is therefore inhibition of LOC158310 (Accession XP_098919.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158310.

[29641] LOC158381 (Accession XP_048461.1) is another GAM189 target gene, herein designated TARGET GENE. LOC158381

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158381 BINDING SITE, designated SEQ ID:6212, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29642] Another function of GAM189 is therefore inhibition of LOC158381 (Accession XP_048461.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158381.

[29643] LOC158402 (Accession XP_098936.1) is another GAM189 target gene, herein designated TARGET GENE. LOC158402 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158402 BINDING SITE, designated SEQ ID:17964, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29644] Another function of GAM189 is therefore inhibition of LOC158402 (Accession XP_098936.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158402.

[29645] LOC158436 (Accession XP_098942.1) is another GAM189 target gene, herein designated TARGET GENE. LOC158436 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158436 BINDING SITE, designated SEQ ID:1263, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29646] Another function of GAM189 is therefore inhibition of LOC158436 (Accession XP_098942.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158436.

[29647] LOC158476 (Accession XP_098955.1) is another GAM189 target gene, herein designated TARGET GENE. LOC158476 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC158476, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158476 BINDING SITE, designated SEQ ID:935, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29648] Another function of GAM189 is therefore inhibition of LOC158476 (Accession XP_098955.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158476.

[29649] LOC158572 (Accession XP_088608.1) is another GAM189 target gene, herein designated TARGET GENE. LOC158572 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158572, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158572 BINDING SITE, designated SEQ ID:12003, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29650] Another function of GAM189 is therefore inhibition of

LOC158572 (Accession XP_088608.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158572.

[29651] LOC158668 (Accession XP_045161.1) is another GAM189 target gene, herein designated TARGET GENE. LOC158668 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158668, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158668 BINDING SITE, designated SEQ ID:16260, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29652] Another function of GAM189 is therefore inhibition of LOC158668 (Accession XP_045161.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158668.

[29653] LOC160897 (Accession XP_090573.3) is another GAM189 target gene, herein designated TARGET GENE. LOC160897 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC160897, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC160897 BINDING SITE, designated SEQ ID:17208, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29654] Another function of GAM189 is therefore inhibition of LOC160897 (Accession XP_090573.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC160897.

[29655] LOC162427 (Accession XP_091549.3) is another GAM189 target gene, herein designated TARGET GENE. LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC162427, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2, designated SEQ ID:12068 and SEQ ID:12068 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29656] Another function of GAM189 is therefore inhibition of LOC162427 (Accession XP_091549.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162427.

[29657] LOC162427 (Accession XP_091549.3) is another GAM189 target gene, herein designated TARGET GENE. LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC162427, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2, designated SEQ ID:8231 and SEQ ID:8231 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29658] Another function of GAM189 is therefore inhibition of LOC162427 (Accession XP_091549.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162427.

[29659] LOC162962 (Accession XP_091886.7) is another GAM189

target gene, herein designated TARGET GENE. LOC162962 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC162962, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162962 BINDING SITE, designated SEQ ID:3249, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29660] Another function of GAM189 is therefore inhibition of LOC162962 (Accession XP_091886.7) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162962.

[29661] LOC162967 (Accession XP_091890.6) is another GAM189 target gene, herein designated TARGET GENE. LOC162967 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC162967, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162967 BINDING SITE, designated SEQ ID:13831, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29662] Another function of GAM189 is therefore inhibition of LOC162967 (Accession XP_091890.6) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162967.

[29663] LOC163227 (Accession NP_775802.1) is another GAM189 target gene, herein designated TARGET GENE. LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC163227, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2, designated SEQ ID:9147 and SEQ ID:11854 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29664] Another function of GAM189 is therefore inhibition of LOC163227 (Accession NP_775802.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163227.

[29665] LOC164091 (Accession XP_089356.1) is another GAM189 target gene, herein designated TARGET GENE. LOC164091 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC164091, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC164091 BINDING SITE, designated SEQ ID:7989, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29666] Another function of GAM189 is therefore inhibition of LOC164091 (Accession XP_089356.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164091.

[29667] LOC168451 (Accession XP_095114.2) is another GAM189 target gene, herein designated TARGET GENE. LOC168451 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC168451, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC168451 BINDING SITE, designated SEQ ID:19786, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29668] Another function of GAM189 is therefore inhibition of LOC168451 (Accession XP_095114.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168451.

[29669] LOC170409 (Accession XP_096330.1) is another GAM189 target gene, herein designated TARGET GENE. LOC170409 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC170409, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170409 BINDING SITE, designated SEQ ID:15561, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29670] Another function of GAM189 is therefore inhibition of LOC170409 (Accession XP_096330.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170409.

[29671] LOC196264 (Accession XP_113683.1) is another GAM189

target gene, herein designated TARGET GENE. LOC196264 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC196264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196264 BINDING SITE, designated SEQ ID:2452, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29672] Another function of GAM189 is therefore inhibition of LOC196264 (Accession XP_113683.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196264.

[29673] LOC197342 (Accession XP_113869.1) is another GAM189 target gene, herein designated TARGET GENE. LOC197342 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC197342, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197342 BINDING SITE, designated SEQ ID:2432, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29674] Another function of GAM189 is therefore inhibition of LOC197342 (Accession XP_113869.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197342.

[29675] LOC197358 (Accession XP_113872.2) is another GAM189 target gene, herein designated TARGET GENE. LOC197358 BINDING SITE1 and LOC197358 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC197358, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197358 BINDING SITE1 and LOC197358 BINDING SITE2, designated SEQ ID:6387 and SEQ ID:4625 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29676] Another function of GAM189 is therefore inhibition of LOC197358 (Accession XP_113872.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197358.

[29677] LOC199725 (Accession XP_117119.1) is another GAM189 target gene, herein designated TARGET GENE. LOC199725 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC199725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199725 BINDING SITE, designated SEQ ID:10884, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29678] Another function of GAM189 is therefore inhibition of LOC199725 (Accession XP_117119.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199725.

[29679] LOC199899 (Accession XP_117153.1) is another GAM189 target gene, herein designated TARGET GENE. LOC199899 BINDING SITE1 and LOC199899 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC199899, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199899 BINDING SITE1

and LOC199899 BINDING SITE2, designated SEQ ID:8292 and SEQ ID:5253 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29680] Another function of GAM189 is therefore inhibition of LOC199899 (Accession XP_117153.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199899.

[29681] LOC199906 (Accession XP_114052.1) is another GAM189 target gene, herein designated TARGET GENE. LOC199906 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC199906, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199906 BINDING SITE, designated SEQ ID:19756, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29682] Another function of GAM189 is therefore inhibition of LOC199906 (Accession XP_114052.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC199906.

[29683] LOC200169 (Accession XP_117200.1) is another GAM189 target gene, herein designated TARGET GENE. LOC200169 BINDING SITE1 and LOC200169 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC200169, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200169 BINDING SITE1 and LOC200169 BINDING SITE2, designated SEQ ID:6122 and SEQ ID:5066 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29684] Another function of GAM189 is therefore inhibition of LOC200169 (Accession XP_117200.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200169.

[29685] LOC200844 (Accession XP_114306.1) is another GAM189 target gene, herein designated TARGET GENE. LOC200844 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC200844, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200844 BINDING SITE, designated SEQ ID:16540, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29686] Another function of GAM189 is therefore inhibition of LOC200844 (Accession XP_114306.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200844.

[29687] LOC200860 (Accession XP_117289.1) is another GAM189 target gene, herein designated TARGET GENE. LOC200860 BINDING SITE1 and LOC200860 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC200860, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200860 BINDING SITE1 and LOC200860 BINDING SITE2, designated SEQ ID:12075 and SEQ ID:4175 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29688] Another function of GAM189 is therefore inhibition of

LOC200860 (Accession XP_117289.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200860.

[29689] LOC200895 (Accession NP_789785.1) is another GAM189 target gene, herein designated TARGET GENE. LOC200895 BINDING SITE1 and LOC200895 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC200895, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200895 BINDING SITE1 and LOC200895 BINDING SITE2, designated SEQ ID:17681 and SEQ ID:11863 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29690] Another function of GAM189 is therefore inhibition of LOC200895 (Accession NP_789785.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200895.

[29691] LOC200916 (Accession XP_114317.3) is another GAM189 target gene, herein designated TARGET GENE. LOC200916

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200916, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200916 BINDING SITE, designated SEQ ID:3465, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29692] Another function of GAM189 is therefore inhibition of LOC200916 (Accession XP_114317.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200916.

[29693] LOC201164 (Accession NP_849158.1) is another GAM189 target gene, herein designated TARGET GENE. LOC201164 BINDING SITE1 and LOC201164 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC201164, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201164 BINDING SITE1 and LOC201164 BINDING SITE2, designated SEQ ID:16993 and SEQ ID:13384 re-

spectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29694] Another function of GAM189 is therefore inhibition of LOC201164 (Accession NP_849158.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201164.

[29695] LOC201292 (Accession NP_775818.1) is another GAM189 target gene, herein designated TARGET GENE. LOC201292 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201292, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201292 BINDING SITE, designated SEQ ID:4556, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29696] Another function of GAM189 is therefore inhibition of LOC201292 (Accession NP_775818.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201292.

[29697] LOC201562 (Accession XP_114343.2) is another GAM189

target gene, herein designated TARGET GENE. LOC201562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201562 BINDING SITE, designated SEQ ID:15044, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29698] Another function of GAM189 is therefore inhibition of LOC201562 (Accession XP_114343.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201562.

[29699] LOC201725 (Accession XP_114370.1) is another GAM189 target gene, herein designated TARGET GENE. LOC201725 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201725 BINDING SITE, designated SEQ ID:5492, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29700] Another function of GAM189 is therefore inhibition of LOC201725 (Accession XP_114370.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201725.

[29701] LOC202400 (Accession XP_117397.1) is another GAM189 target gene, herein designated TARGET GENE. LOC202400 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC202400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202400 BINDING SITE, designated SEQ ID:9145, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29702] Another function of GAM189 is therefore inhibition of LOC202400 (Accession XP_117397.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202400.

[29703] LOC202404 (Accession XP_114481.4) is another GAM189 target gene, herein designated TARGET GENE. LOC202404

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC202404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202404 BINDING SITE, designated SEQ ID:18628, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29704] Another function of GAM189 is therefore inhibition of LOC202404 (Accession XP_114481.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202404.

[29705] LOC202460 (Accession XP_114493.1) is another GAM189 target gene, herein designated TARGET GENE. LOC202460 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC202460, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202460 BINDING SITE, designated SEQ ID:16450, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29706] Another function of GAM189 is therefore inhibition of LOC202460 (Accession XP_114493.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202460.

[29707] LOC202934 (Accession XP_117486.2) is another GAM189 target gene, herein designated TARGET GENE. LOC202934 BINDING SITE1 and LOC202934 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC202934, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202934 BINDING SITE1 and LOC202934 BINDING SITE2, designated SEQ ID:4820 and SEQ ID:1729 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29708] Another function of GAM189 is therefore inhibition of LOC202934 (Accession XP_117486.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202934.

[29709] LOC203547 (Accession XP_114719.1) is another GAM189

target gene, herein designated TARGET GENE. LOC203547 BINDING SITE1 and LOC203547 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC203547, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC203547 BINDING SITE1 and LOC203547 BINDING SITE2, designated SEQ ID:9545 and SEQ ID:2351 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29710] Another function of GAM189 is therefore inhibition of LOC203547 (Accession XP_114719.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203547.

[29711] LOC204288 (Accession XP_115295.1) is another GAM189 target gene, herein designated TARGET GENE. LOC204288 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC204288, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC204288 BINDING SITE, designated SEQ ID:10724, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29712] Another function of GAM189 is therefore inhibition of LOC204288 (Accession XP_115295.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC204288.

[29713] LOC219293 (Accession XP_166599.2) is another GAM189 target gene, herein designated TARGET GENE. LOC219293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219293 BINDING SITE, designated SEQ ID:19361, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29714] Another function of GAM189 is therefore inhibition of LOC219293 (Accession XP_166599.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219293.

[29715] LOC219700 (Accession XP_167570.1) is another GAM189 target gene, herein designated TARGET GENE. LOC219700 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219700, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219700 BINDING SITE, designated SEQ ID:2410, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29716] Another function of GAM189 is therefore inhibition of LOC219700 (Accession XP_167570.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219700.

[29717] LOC219731 (Accession XP_167596.1) is another GAM189 target gene, herein designated TARGET GENE. LOC219731 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219731 BINDING SITE, designated SEQ ID:4678, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29718] Another function of GAM189 is therefore inhibition of LOC219731 (Accession XP_167596.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219731.

[29719] LOC219735 (Accession XP_167601.1) is another GAM189 target gene, herein designated TARGET GENE. LOC219735 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219735 BINDING SITE, designated SEQ ID:18913, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29720] Another function of GAM189 is therefore inhibition of LOC219735 (Accession XP_167601.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219735.

[29721] LOC219894 (Accession XP_167782.1) is another GAM189

target gene, herein designated TARGET GENE. LOC219894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219894 BINDING SITE, designated SEQ ID:14588, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29722] Another function of GAM189 is therefore inhibition of LOC219894 (Accession XP_167782.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219894.

[29723] LOC220074 (Accession NP_660352.1) is another GAM189 target gene, herein designated TARGET GENE. LOC220074 BINDING SITE1 through LOC220074 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC220074, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220074 BINDING SITE1 through LOC220074 BINDING SITE3, des-

ignated SEQ ID:16838, SEQ ID:6497 and SEQ ID:9147 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29724] Another function of GAM189 is therefore inhibition of LOC220074 (Accession NP_660352.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220074.

[29725] LOC221174 (Accession XP_167915.1) is another GAM189 target gene, herein designated TARGET GENE. LOC221174 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221174, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221174 BINDING SITE, designated SEQ ID:17256, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29726] Another function of GAM189 is therefore inhibition of LOC221174 (Accession XP_167915.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221174.

[29727] LOC221663 (Accession XP_168131.1) is another GAM189 target gene, herein designated TARGET GENE. LOC221663 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221663 BINDING SITE, designated SEQ ID:1939, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29728] Another function of GAM189 is therefore inhibition of LOC221663 (Accession XP_168131.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221663.

[29729] LOC221946 (Accession XP_168340.1) is another GAM189 target gene, herein designated TARGET GENE. LOC221946 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221946 BINDING SITE, designated SEQ ID:15948, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29730] Another function of GAM189 is therefore inhibition of LOC221946 (Accession XP_168340.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221946.

[29731] LOC221960 (Accession XP_165859.1) is another GAM189 target gene, herein designated TARGET GENE. LOC221960 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221960, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221960 BINDING SITE, designated SEQ ID:14860, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29732] Another function of GAM189 is therefore inhibition of LOC221960 (Accession XP_165859.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221960.

[29733] LOC221964 (Accession XP_168342.1) is another GAM189

target gene, herein designated TARGET GENE. LOC221964 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221964, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221964 BINDING SITE, designated SEQ ID:17029, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29734] Another function of GAM189 is therefore inhibition of LOC221964 (Accession XP_168342.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221964.

[29735] LOC222057 (Accession XP_166594.2) is another GAM189 target gene, herein designated TARGET GENE. LOC222057 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222057, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222057 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29736] Another function of GAM189 is therefore inhibition of LOC222057 (Accession XP_166594.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222057.

[29737] LOC222068 (Accession XP_166556.1) is another GAM189 target gene, herein designated TARGET GENE. LOC222068 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC222068, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222068 BINDING SITE, designated SEQ ID:3232, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29738] Another function of GAM189 is therefore inhibition of LOC222068 (Accession XP_166556.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222068.

[29739] LOC222159 (Accession XP_212100.1) is another GAM189 target gene, herein designated TARGET GENE. LOC222159

BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC222159, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222159 BINDING SITE, designated SEQ ID:16228, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29740] Another function of GAM189 is therefore inhibition of LOC222159 (Accession XP_212100.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222159.

[29741] LOC252983 (Accession XP_170858.2) is another GAM189 target gene, herein designated TARGET GENE. LOC252983 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC252983, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC252983 BINDING SITE, designated SEQ ID:2959, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29742] Another function of GAM189 is therefore inhibition of LOC252983 (Accession XP_170858.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC252983.

[29743] LOC253612 (Accession XP_172985.2) is another GAM189 target gene, herein designated TARGET GENE. LOC253612 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253612, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253612 BINDING SITE, designated SEQ ID:5487, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29744] Another function of GAM189 is therefore inhibition of LOC253612 (Accession XP_172985.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253612.

[29745] LOC253805 (Accession XP_172854.1) is another GAM189 target gene, herein designated TARGET GENE. LOC253805

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC253805, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253805 BINDING SITE, designated SEQ ID:4532, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29746] Another function of GAM189 is therefore inhibition of LOC253805 (Accession XP_172854.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253805.

[29747] LOC254875 (Accession XP_171170.1) is another GAM189 target gene, herein designated TARGET GENE. LOC254875 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254875, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254875 BINDING SITE, designated SEQ ID:6188, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29748] Another function of GAM189 is therefore inhibition of LOC254875 (Accession XP_171170.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254875.

[29749] LOC255031 (Accession XP_173187.1) is another GAM189 target gene, herein designated TARGET GENE. LOC255031 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC255031, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255031 BINDING SITE, designated SEQ ID:3261, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29750] Another function of GAM189 is therefore inhibition of LOC255031 (Accession XP_173187.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255031.

[29751] LOC255177 (Accession XP_172941.1) is another GAM189 target gene, herein designated TARGET GENE. LOC255177 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC255177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255177 BINDING SITE, designated SEQ ID:6294, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29752] Another function of GAM189 is therefore inhibition of LOC255177 (Accession XP_172941.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255177.

[29753] LOC255458 (Accession XP_173150.1) is another GAM189 target gene, herein designated TARGET GENE. LOC255458 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255458, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255458 BINDING SITE, designated SEQ ID:6365, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29754] Another function of GAM189 is therefore inhibition of

LOC255458 (Accession XP_173150.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255458.

[29755] LOC255488 (Accession XP_172581.2) is another GAM189 target gene, herein designated TARGET GENE. LOC255488 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC255488, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255488 BINDING SITE, designated SEQ ID:3150, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29756] Another function of GAM189 is therefore inhibition of LOC255488 (Accession XP_172581.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255488.

[29757] LOC255975 (Accession XP_171083.2) is another GAM189 target gene, herein designated TARGET GENE. LOC255975 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255975, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255975 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29758] Another function of GAM189 is therefore inhibition of LOC255975 (Accession XP_171083.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255975.

[29759] LOC256614 (Accession XP_172864.1) is another GAM189 target gene, herein designated TARGET GENE. LOC256614 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC256614, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256614 BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29760] Another function of GAM189 is therefore inhibition of LOC256614 (Accession XP_172864.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256614.

[29761] LOC282905 (Accession XP_212606.1) is another GAM189 target gene, herein designated TARGET GENE. LOC282905 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282905, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282905 BINDING SITE, designated SEQ ID:986, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29762] Another function of GAM189 is therefore inhibition of LOC282905 (Accession XP_212606.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282905.

[29763] LOC282943 (Accession XP_212647.1) is another GAM189 target gene, herein designated TARGET GENE. LOC282943 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282943, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282943 BINDING SITE, designated SEQ ID:986, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29764] Another function of GAM189 is therefore inhibition of LOC282943 (Accession XP_212647.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282943.

[29765] LOC282963 (Accession XP_210834.1) is another GAM189 target gene, herein designated TARGET GENE. LOC282963 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282963, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282963 BINDING SITE, designated SEQ ID:814, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29766] Another function of GAM189 is therefore inhibition of LOC282963 (Accession XP_210834.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC282963.

[29767] LOC282972 (Accession XP_210837.1) is another GAM189 target gene, herein designated TARGET GENE. LOC282972 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282972 BINDING SITE, designated SEQ ID:18172, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29768] Another function of GAM189 is therefore inhibition of LOC282972 (Accession XP_210837.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282972.

[29769] LOC282987 (Accession XP_210845.1) is another GAM189 target gene, herein designated TARGET GENE. LOC282987 BINDING SITE1 and LOC282987 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC282987, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282987 BINDING SITE1 and LOC282987 BINDING SITE2, designated SEQ ID:16541 and SEQ ID:12068 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29770] Another function of GAM189 is therefore inhibition of LOC282987 (Accession XP_210845.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282987.

[29771] LOC282997 (Accession XP_208473.1) is another GAM189 target gene, herein designated TARGET GENE. LOC282997 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282997, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282997 BINDING SITE, designated SEQ ID:11798, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29772] Another function of GAM189 is therefore inhibition of LOC282997 (Accession XP_208473.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282997.

[29773] LOC283047 (Accession XP_210870.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283047 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283047, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283047 BINDING SITE, designated SEQ ID:17587, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29774] Another function of GAM189 is therefore inhibition of LOC283047 (Accession XP_210870.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283047.

[29775] LOC283061 (Accession XP_210875.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283061, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283061 BINDING SITE, designated SEQ ID:7252, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29776] Another function of GAM189 is therefore inhibition of LOC283061 (Accession XP_210875.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283061.

[29777] LOC283087 (Accession XP_208509.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283087 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283087, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283087 BINDING SITE, designated SEQ ID:4176, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29778] Another function of GAM189 is therefore inhibition of LOC283087 (Accession XP_208509.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283087.

[29779] LOC283089 (Accession XP_210885.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283089 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283089, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283089 BINDING SITE, designated SEQ ID:2219, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29780] Another function of GAM189 is therefore inhibition of LOC283089 (Accession XP_210885.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283089.

[29781] LOC283119 (Accession XP_210895.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283119 BINDING SITE, designated SEQ ID:16397, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29782] Another function of GAM189 is therefore inhibition of LOC283119 (Accession XP_210895.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283119.

[29783] LOC283130 (Accession XP_208525.3) is another GAM189 target gene, herein designated TARGET GENE. LOC283130 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283130, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283130 BINDING SITE, designated SEQ ID:5323, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29784] Another function of GAM189 is therefore inhibition of LOC283130 (Accession XP_208525.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283130.

[29785] LOC283140 (Accession XP_210911.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283140 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283140 BINDING SITE, designated SEQ ID:12544, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29786] Another function of GAM189 is therefore inhibition of LOC283140 (Accession XP_210911.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283140.

[29787] LOC283142 (Accession XP_210925.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC283142 BINDING SITE, designated SEQ ID:19977, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29788] Another function of GAM189 is therefore inhibition of LOC283142 (Accession XP_210925.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283142.

[29789] LOC283143 (Accession XP_210920.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283143 BINDING SITE, designated SEQ ID:2650, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29790] Another function of GAM189 is therefore inhibition of LOC283143 (Accession XP_210920.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283143.

[29791] LOC283152 (Accession XP_210917.2) is another GAM189 target gene, herein designated TARGET GENE. LOC283152 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283152, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283152 BINDING SITE, designated SEQ ID:19812, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29792] Another function of GAM189 is therefore inhibition of LOC283152 (Accession XP_210917.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283152.

[29793] LOC283170 (Accession XP_208535.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283170 BINDING SITE, designated SEQ ID:4979, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29794] Another function of GAM189 is therefore inhibition of LOC283170 (Accession XP_208535.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283170.

[29795] LOC283177 (Accession XP_210903.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283177 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283177 BINDING SITE, designated SEQ ID:15574, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29796] Another function of GAM189 is therefore inhibition of LOC283177 (Accession XP_210903.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283177.

[29797] LOC283215 (Accession XP_208555.2) is another GAM189

target gene, herein designated TARGET GENE. LOC283215 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283215, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283215 BINDING SITE, designated SEQ ID:10112, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29798] Another function of GAM189 is therefore inhibition of LOC283215 (Accession XP_208555.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283215.

[29799] LOC283241 (Accession NP_787089.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283241 BINDING SITE, designated SEQ ID:9525, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29800] Another function of GAM189 is therefore inhibition of LOC283241 (Accession NP_787089.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283241.

[29801] LOC283244 (Accession XP_208583.2) is another GAM189 target gene, herein designated TARGET GENE. LOC283244 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283244, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283244 BINDING SITE, designated SEQ ID:4496, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29802] Another function of GAM189 is therefore inhibition of LOC283244 (Accession XP_208583.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283244.

[29803] LOC283262 (Accession XP_210952.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283262

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283262 BINDING SITE, designated SEQ ID:8223, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29804] Another function of GAM189 is therefore inhibition of LOC283262 (Accession XP_210952.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283262.

[29805] LOC283278 (Accession XP_210961.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283278 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283278, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283278 BINDING SITE, designated SEQ ID:9036, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29806] Another function of GAM189 is therefore inhibition of LOC283278 (Accession XP_210961.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283278.

[29807] LOC283293 (Accession XP_210962.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283293 BINDING SITE, designated SEQ ID:17952, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29808] Another function of GAM189 is therefore inhibition of LOC283293 (Accession XP_210962.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283293.

[29809] LOC283299 (Accession XP_210965.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283299 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC283299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283299 BINDING SITE, designated SEQ ID:9585, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29810] Another function of GAM189 is therefore inhibition of LOC283299 (Accession XP_210965.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283299.

[29811] LOC283329 (Accession XP_210978.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283329 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283329 BINDING SITE, designated SEQ ID:2201, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29812] Another function of GAM189 is therefore inhibition of

LOC283329 (Accession XP_210978.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283329.

[29813] LOC283335 (Accession XP_210981.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283335 BINDING SITE1 and LOC283335 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283335, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283335 BINDING SITE1 and LOC283335 BINDING SITE2, designated SEQ ID:2143 and SEQ ID:16144 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29814] Another function of GAM189 is therefore inhibition of LOC283335 (Accession XP_210981.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283335.

[29815] LOC283377 (Accession XP_208647.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283377

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283377, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283377 BINDING SITE, designated SEQ ID:8232, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29816] Another function of GAM189 is therefore inhibition of LOC283377 (Accession XP_208647.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283377.

[29817] LOC283387 (Accession XP_211007.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283387 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283387 BINDING SITE, designated SEQ ID:7265, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29818] Another function of GAM189 is therefore inhibition of LOC283387 (Accession XP_211007.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283387.

[29819] LOC283394 (Accession XP_211021.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283394 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283394 BINDING SITE, designated SEQ ID:1730, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29820] Another function of GAM189 is therefore inhibition of LOC283394 (Accession XP_211021.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283394.

[29821] LOC283395 (Accession XP_211020.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283395 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC283395, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283395 BINDING SITE, designated SEQ ID:9003, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29822] Another function of GAM189 is therefore inhibition of LOC283395 (Accession XP_211020.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283395.

[29823] LOC283400 (Accession XP_211024.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283400 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283400 BINDING SITE, designated SEQ ID:19206, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29824] Another function of GAM189 is therefore inhibition of

LOC283400 (Accession XP_211024.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283400.

[29825] LOC283432 (Accession XP_211032.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283432 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283432 BINDING SITE, designated SEQ ID:16658, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29826] Another function of GAM189 is therefore inhibition of LOC283432 (Accession XP_211032.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283432.

[29827] LOC283441 (Accession XP_211043.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283441 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283441, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283441 BINDING SITE, designated SEQ ID:2220, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29828] Another function of GAM189 is therefore inhibition of LOC283441 (Accession XP_211043.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283441.

[29829] LOC283442 (Accession XP_211037.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283442 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283442 BINDING SITE, designated SEQ ID:10032, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29830] Another function of GAM189 is therefore inhibition of LOC283442 (Accession XP_211037.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283442.

[29831] LOC283445 (Accession XP_211044.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283445 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283445 BINDING SITE, designated SEQ ID:5683, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29832] Another function of GAM189 is therefore inhibition of LOC283445 (Accession XP_211044.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283445.

[29833] LOC283452 (Accession XP_208679.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283452 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283452, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283452 BINDING SITE, designated SEQ ID:7397, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29834] Another function of GAM189 is therefore inhibition of LOC283452 (Accession XP_208679.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283452.

[29835] LOC283454 (Accession XP_211049.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283454 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283454, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283454 BINDING SITE, designated SEQ ID:14861, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29836] Another function of GAM189 is therefore inhibition of LOC283454 (Accession XP_211049.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283454.

[29837] LOC283467 (Accession XP_211050.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283467 BINDING SITE, designated SEQ ID:13967, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29838] Another function of GAM189 is therefore inhibition of LOC283467 (Accession XP_211050.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283467.

[29839] LOC283475 (Accession XP_211056.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283475 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283475 BINDING SITE, designated SEQ ID:9892, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29840] Another function of GAM189 is therefore inhibition of LOC283475 (Accession XP_211056.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283475.

[29841] LOC283484 (Accession XP_211053.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283484 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283484, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283484 BINDING SITE, designated SEQ ID:17710, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29842] Another function of GAM189 is therefore inhibition of LOC283484 (Accession XP_211053.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283484.

[29843] LOC283487 (Accession XP_211062.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283487 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC283487, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283487 BINDING SITE, designated SEQ ID:7371, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29844] Another function of GAM189 is therefore inhibition of LOC283487 (Accession XP_211062.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283487.

[29845] LOC283507 (Accession XP_211075.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283507 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283507, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283507 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29846] Another function of GAM189 is therefore inhibition of LOC283507 (Accession XP_211075.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283507.

[29847] LOC283534 (Accession XP_211083.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283534 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283534, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283534 BINDING SITE, designated SEQ ID:3199, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29848] Another function of GAM189 is therefore inhibition of LOC283534 (Accession XP_211083.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283534.

[29849] LOC283570 (Accession XP_211118.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283570 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283570, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283570 BINDING SITE, designated SEQ ID:13652, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29850] Another function of GAM189 is therefore inhibition of LOC283570 (Accession XP_211118.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283570.

[29851] LOC283575 (Accession XP_211095.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283575 BINDING SITE1 and LOC283575 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283575, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC283575 BINDING SITE1 and LOC283575 BINDING SITE2, designated SEQ ID:6183 and SEQ ID:10067 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29852] Another function of GAM189 is therefore inhibition of LOC283575 (Accession XP_211095.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283575.

[29853] LOC283585 (Accession XP_294741.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283585 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283585, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283585 BINDING SITE, designated SEQ ID:10466, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29854] Another function of GAM189 is therefore inhibition of LOC283585 (Accession XP_294741.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283585.

[29855] LOC283588 (Accession NP_787093.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283588 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283588, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283588 BINDING SITE, designated SEQ ID:10638, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29856] Another function of GAM189 is therefore inhibition of LOC283588 (Accession NP_787093.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283588.

[29857] LOC283624 (Accession XP_211126.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283624 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283624, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283624 BINDING SITE, designated SEQ ID:4420, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29858] Another function of GAM189 is therefore inhibition of LOC283624 (Accession XP_211126.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283624.

[29859] LOC283637 (Accession XP_211134.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283637 BINDING SITE1 and LOC283637 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283637, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283637 BINDING SITE1 and LOC283637 BINDING SITE2, designated SEQ ID:14859 and SEQ ID:3581 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29860] Another function of GAM189 is therefore inhibition of LOC283637 (Accession XP_211134.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283637.

[29861] LOC283641 (Accession XP_208764.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283641 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283641, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283641 BINDING SITE, designated SEQ ID:17964, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29862] Another function of GAM189 is therefore inhibition of LOC283641 (Accession XP_208764.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283641.

[29863] LOC283663 (Accession XP_211147.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283663 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283663, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283663 BINDING SITE, designated SEQ ID:16674, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29864] Another function of GAM189 is therefore inhibition of LOC283663 (Accession XP_211147.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283663.

[29865] LOC283664 (Accession XP_208773.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283664 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283664, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283664 BINDING SITE, designated SEQ ID:8450, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29866] Another function of GAM189 is therefore inhibition of LOC283664 (Accession XP_208773.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283664.

[29867] LOC283672 (Accession XP_211152.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283672 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283672, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283672 BINDING SITE, designated SEQ ID:1730, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29868] Another function of GAM189 is therefore inhibition of LOC283672 (Accession XP_211152.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283672.

[29869] LOC283687 (Accession NP_787094.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283687 BINDING SITE, designated SEQ ID:11904, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29870] Another function of GAM189 is therefore inhibition of LOC283687 (Accession NP_787094.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283687.

[29871] LOC283693 (Accession XP_208788.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283693 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283693 BINDING SITE, designated SEQ ID:5305, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29872] Another function of GAM189 is therefore inhibition of LOC283693 (Accession XP_208788.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283693.

[29873] LOC283701 (Accession XP_211170.3) is another GAM189 target gene, herein designated TARGET GENE. LOC283701 BINDING SITE1 and LOC283701 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283701, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283701 BINDING SITE1 and LOC283701 BINDING SITE2, designated SEQ ID:13716 and SEQ ID:14381 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29874] Another function of GAM189 is therefore inhibition of LOC283701 (Accession XP_211170.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283701.

[29875] LOC283723 (Accession XP_211176.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283723 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283723, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283723 BINDING SITE, designated SEQ ID:9256, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29876] Another function of GAM189 is therefore inhibition of LOC283723 (Accession XP_211176.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283723.

[29877] LOC283741 (Accession XP_208115.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283741 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283741, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283741 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29878] Another function of GAM189 is therefore inhibition of LOC283741 (Accession XP_208115.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283741.

[29879] LOC283767 (Accession XP_208835.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283767 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283767, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283767 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29880] Another function of GAM189 is therefore inhibition of LOC283767 (Accession XP_208835.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283767.

[29881] LOC283778 (Accession XP_211199.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283778 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283778, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283778 BINDING SITE, designated SEQ ID:4370, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29882] Another function of GAM189 is therefore inhibition of LOC283778 (Accession XP_211199.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283778.

[29883] LOC283779 (Accession XP_211198.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283779 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283779, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283779 BINDING SITE, designated SEQ ID:17644, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29884] Another function of GAM189 is therefore inhibition of LOC283779 (Accession XP_211198.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283779.

[29885] LOC283801 (Accession XP_208122.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283801 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283801, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283801 BINDING SITE, designated SEQ ID:6265, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29886] Another function of GAM189 is therefore inhibition of LOC283801 (Accession XP_208122.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283801.

[29887] LOC283802 (Accession XP_208850.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283802 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283802, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC283802 BINDING SITE, designated SEQ ID:16700, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29888] Another function of GAM189 is therefore inhibition of LOC283802 (Accession XP_208850.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283802.

[29889] LOC283818 (Accession XP_211218.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283818 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283818 BINDING SITE, designated SEQ ID:9546, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29890] Another function of GAM189 is therefore inhibition of LOC283818 (Accession XP_211218.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283818.

[29891] LOC283849 (Accession XP_208870.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283849 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC283849, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283849 BINDING SITE, designated SEQ ID:4308, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29892] Another function of GAM189 is therefore inhibition of LOC283849 (Accession XP_208870.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283849.

[29893] LOC283849 (Accession NP_848611.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283849 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC283849, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of LOC283849 BINDING SITE, designated SEQ ID:4308, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29894] Another function of GAM189 is therefore inhibition of LOC283849 (Accession NP_848611.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283849.

[29895] LOC283851 (Accession XP_211229.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283851 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283851, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283851 BINDING SITE, designated SEQ ID:4974, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29896] Another function of GAM189 is therefore inhibition of LOC283851 (Accession XP_211229.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283851.

[29897] LOC283856 (Accession XP_211233.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283856 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283856 BINDING SITE, designated SEQ ID:6184, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29898] Another function of GAM189 is therefore inhibition of LOC283856 (Accession XP_211233.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283856.

[29899] LOC283861 (Accession NP_787095.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283861 BINDING SITE1 and LOC283861 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283861, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC283861 BINDING SITE1 and LOC283861 BINDING SITE2, designated SEQ ID:1401 and SEQ ID:1635 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29900] Another function of GAM189 is therefore inhibition of LOC283861 (Accession NP_787095.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283861.

[29901] LOC283863 (Accession XP_208875.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283863 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283863 BINDING SITE, designated SEQ ID:13285, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29902] Another function of GAM189 is therefore inhibition of LOC283863 (Accession XP_208875.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283863.

[29903] LOC283887 (Accession XP_211248.2) is another GAM189 target gene, herein designated TARGET GENE. LOC283887 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283887, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283887 BINDING SITE, designated SEQ ID:18993, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29904] Another function of GAM189 is therefore inhibition of LOC283887 (Accession XP_211248.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283887.

[29905] LOC283888 (Accession XP_211249.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283888 BINDING SITE1 and LOC283888 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283888, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283888 BINDING SITE1 and LOC283888 BINDING SITE2, designated SEQ ID:14104 and SEQ ID:11072 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29906] Another function of GAM189 is therefore inhibition of LOC283888 (Accession XP_211249.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283888.

[29907] LOC283889 (Accession XP_208899.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283889 BINDING SITE1 and LOC283889 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283889, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283889 BINDING SITE1 and LOC283889 BINDING SITE2, designated SEQ ID:10739 and SEQ ID:3899 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29908] Another function of GAM189 is therefore inhibition of LOC283889 (Accession XP_208899.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283889.

[29909] LOC283928 (Accession XP_208909.1) is another GAM189 target gene, herein designated TARGET GENE. LOC283928 BINDING SITE1 and LOC283928 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283928, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283928 BINDING SITE1 and LOC283928 BINDING SITE2, designated SEQ ID:20101 and SEQ ID:4703 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29910] Another function of GAM189 is therefore inhibition of LOC283928 (Accession XP_208909.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283928.

[29911] LOC283929 (Accession XP_208905.2) is another GAM189

target gene, herein designated TARGET GENE. LOC283929 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283929, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283929 BINDING SITE, designated SEQ ID:15775, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29912] Another function of GAM189 is therefore inhibition of LOC283929 (Accession XP_208905.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283929.

[29913] LOC283964 (Accession XP_208145.2) is another GAM189 target gene, herein designated TARGET GENE. LOC283964 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283964, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283964 BINDING SITE, designated SEQ ID:19569, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29914] Another function of GAM189 is therefore inhibition of LOC283964 (Accession XP_208145.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283964.

[29915] LOC284001 (Accession XP_208958.2) is another GAM189 target gene, herein designated TARGET GENE. LOC284001 BINDING SITE1 and LOC284001 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284001, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284001 BINDING SITE1 and LOC284001 BINDING SITE2, designated SEQ ID:11764 and SEQ ID:18161 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29916] Another function of GAM189 is therefore inhibition of LOC284001 (Accession XP_208958.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284001.

[29917] LOC284016 (Accession XP_211298.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284016 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284016, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284016 BINDING SITE, designated SEQ ID:3244, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29918] Another function of GAM189 is therefore inhibition of LOC284016 (Accession XP_211298.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284016.

[29919] LOC284017 (Accession XP_208961.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284017 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284017, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284017 BINDING SITE, designated SEQ ID:18610, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29920] Another function of GAM189 is therefore inhibition of LOC284017 (Accession XP_208961.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284017.

[29921] LOC284019 (Accession XP_211302.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284019 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284019 BINDING SITE, designated SEQ ID:10124, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29922] Another function of GAM189 is therefore inhibition of LOC284019 (Accession XP_211302.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284019.

[29923] LOC284023 (Accession XP_208983.3) is another GAM189

target gene, herein designated TARGET GENE. LOC284023 BINDING SITE1 and LOC284023 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284023, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284023 BINDING SITE1 and LOC284023 BINDING SITE2, designated SEQ ID:17953 and SEQ ID:14597 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29924] Another function of GAM189 is therefore inhibition of LOC284023 (Accession XP_208983.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284023.

[29925] LOC284048 (Accession XP_208152.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284048 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC284048 BINDING SITE, designated SEQ ID:10847, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29926] Another function of GAM189 is therefore inhibition of LOC284048 (Accession XP_208152.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284048.

[29927] LOC284074 (Accession XP_211321.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284074 BINDING SITE1 and LOC284074 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284074, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284074 BINDING SITE1 and LOC284074 BINDING SITE2, designated SEQ ID:15531 and SEQ ID:1596 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29928] Another function of GAM189 is therefore inhibition of LOC284074 (Accession XP_211321.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284074.

[29929] LOC284082 (Accession XP_211323.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284082 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284082 BINDING SITE, designated SEQ ID:18527, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29930] Another function of GAM189 is therefore inhibition of LOC284082 (Accession XP_211323.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284082.

[29931] LOC284095 (Accession XP_211324.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284095 BINDING SITE1 through LOC284095 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284095, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284095 BINDING SITE1 through LOC284095 BINDING SITE3, designated SEQ ID:15513, SEQ ID:11799 and SEQ ID:7333 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29932] Another function of GAM189 is therefore inhibition of LOC284095 (Accession XP_211324.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284095.

[29933] LOC284098 (Accession XP_209008.3) is another GAM189 target gene, herein designated TARGET GENE. LOC284098 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284098, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284098 BINDING SITE, designated SEQ ID:8582, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29934] Another function of GAM189 is therefore inhibition of LOC284098 (Accession XP_209008.3) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284098.

[29935] LOC284100 (Accession XP_209015.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284100 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284100, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284100 BINDING SITE, designated SEQ ID:1777, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29936] Another function of GAM189 is therefore inhibition of LOC284100 (Accession XP_209015.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284100.

[29937] LOC284101 (Accession XP_209019.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284101 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284101, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284101 BINDING SITE, designated SEQ ID:19537, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29938] Another function of GAM189 is therefore inhibition of LOC284101 (Accession XP_209019.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284101.

[29939] LOC284102 (Accession XP_211327.3) is another GAM189 target gene, herein designated TARGET GENE. LOC284102 BINDING SITE1 through LOC284102 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284102, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284102 BINDING SITE1 through LOC284102 BINDING SITE3, designated SEQ ID:7745, SEQ ID:18149 and SEQ ID:3233 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29940] Another function of GAM189 is therefore inhibition of

LOC284102 (Accession XP_211327.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284102.

[29941] LOC284128 (Accession XP_211342.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284128 BINDING SITE1 and LOC284128 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284128, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284128 BINDING SITE1 and LOC284128 BINDING SITE2, designated SEQ ID:17271 and SEQ ID:1966 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29942] Another function of GAM189 is therefore inhibition of LOC284128 (Accession XP_211342.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284128.

[29943] LOC284135 (Accession XP_209032.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284135

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284135 BINDING SITE, designated SEQ ID:12779, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29944] Another function of GAM189 is therefore inhibition of LOC284135 (Accession XP_209032.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284135.

[29945] LOC284145 (Accession XP_211353.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284145 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284145, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284145 BINDING SITE, designated SEQ ID:4102, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29946] Another function of GAM189 is therefore inhibition of LOC284145 (Accession XP_211353.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284145.

[29947] LOC284171 (Accession XP_209051.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284171 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284171 BINDING SITE, designated SEQ ID:11530, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29948] Another function of GAM189 is therefore inhibition of LOC284171 (Accession XP_209051.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284171.

[29949] LOC284183 (Accession XP_209059.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by LOC284183, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2, designated SEQ ID:1111 and SEQ ID:9456 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29950] Another function of GAM189 is therefore inhibition of LOC284183 (Accession XP_209059.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284183.

[29951] LOC284186 (Accession XP_209060.2) is another GAM189 target gene, herein designated TARGET GENE. LOC284186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284186 BINDING SITE, designated SEQ ID:14861, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29952] Another function of GAM189 is therefore inhibition of LOC284186 (Accession XP_209060.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284186.

[29953] LOC284191 (Accession XP_211377.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284191 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284191, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284191 BINDING SITE, designated SEQ ID:4421, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29954] Another function of GAM189 is therefore inhibition of LOC284191 (Accession XP_211377.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284191.

[29955] LOC284202 (Accession XP_208174.2) is another GAM189 target gene, herein designated TARGET GENE. LOC284202

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284202, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284202 BINDING SITE, designated SEQ ID:3800, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29956] Another function of GAM189 is therefore inhibition of LOC284202 (Accession XP_208174.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284202.

[29957] LOC284267 (Accession XP_211411.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284267 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284267, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284267 BINDING SITE, designated SEQ ID:8494, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29958] Another function of GAM189 is therefore inhibition of LOC284267 (Accession XP_211411.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284267.

[29959] LOC284276 (Accession XP_211412.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284276 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284276 BINDING SITE, designated SEQ ID:1026, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29960] Another function of GAM189 is therefore inhibition of LOC284276 (Accession XP_211412.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284276.

[29961] LOC284286 (Accession XP_211419.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284286 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC284286, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284286 BINDING SITE, designated SEQ ID:19875, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29962] Another function of GAM189 is therefore inhibition of LOC284286 (Accession XP_211419.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284286.

[29963] LOC284289 (Accession XP_209105.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284289 BINDING SITE1 and LOC284289 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284289, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284289 BINDING SITE1 and LOC284289 BINDING SITE2, designated SEQ ID:16648 and SEQ ID:1885 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:246.

[29964] Another function of GAM189 is therefore inhibition of LOC284289 (Accession XP_209105.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284289.

[29965] LOC284297 (Accession XP_209112.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284297 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284297, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284297 BINDING SITE, designated SEQ ID:1751, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29966] Another function of GAM189 is therefore inhibition of LOC284297 (Accession XP_209112.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284297.

[29967] LOC284304 (Accession XP_211426.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284304

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284304, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284304 BINDING SITE, designated SEQ ID:4849, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29968] Another function of GAM189 is therefore inhibition of LOC284304 (Accession XP_211426.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284304.

[29969] LOC284317 (Accession XP_209162.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284317 BINDING SITE1 and LOC284317 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284317, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284317 BINDING SITE1 and LOC284317 BINDING SITE2, designated SEQ ID:7077 and SEQ ID:3386 respectively, to the nucleotide sequence

of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29970] Another function of GAM189 is therefore inhibition of LOC284317 (Accession XP_209162.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284317.

[29971] LOC284325 (Accession XP_209143.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284325 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284325, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284325 BINDING SITE, designated SEQ ID:1731, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29972] Another function of GAM189 is therefore inhibition of LOC284325 (Accession XP_209143.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284325.

[29973] LOC284356 (Accession XP_211437.1) is another GAM189

target gene, herein designated TARGET GENE. LOC284356 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284356 BINDING SITE, designated SEQ ID:11986, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29974] Another function of GAM189 is therefore inhibition of LOC284356 (Accession XP_211437.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284356.

[29975] LOC284362 (Accession XP_211435.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284362 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284362, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284362 BINDING SITE, designated SEQ ID:18898, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[29976] Another function of GAM189 is therefore inhibition of LOC284362 (Accession XP_211435.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284362.

[29977] LOC284375 (Accession XP_209154.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284375 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284375, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284375 BINDING SITE, designated SEQ ID:16701, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29978] Another function of GAM189 is therefore inhibition of LOC284375 (Accession XP_209154.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284375.

[29979] LOC284376 (Accession XP_209157.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284376

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284376 BINDING SITE, designated SEQ ID:19718, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29980] Another function of GAM189 is therefore inhibition of LOC284376 (Accession XP_209157.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284376.

[29981] LOC284379 (Accession XP_209163.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284379 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284379, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284379 BINDING SITE, designated SEQ ID:9312, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29982] Another function of GAM189 is therefore inhibition of LOC284379 (Accession XP_209163.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284379.

[29983] LOC284395 (Accession XP_211454.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284395 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284395, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284395 BINDING SITE, designated SEQ ID:16459, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29984] Another function of GAM189 is therefore inhibition of LOC284395 (Accession XP_211454.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284395.

[29985] LOC284396 (Accession XP_211452.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284396 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC284396, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284396 BINDING SITE, designated SEQ ID:10399, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29986] Another function of GAM189 is therefore inhibition of LOC284396 (Accession XP_211452.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284396.

[29987] LOC284405 (Accession XP_209183.2) is another GAM189 target gene, herein designated TARGET GENE. LOC284405 BINDING SITE1 and LOC284405 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284405, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284405 BINDING SITE1 and LOC284405 BINDING SITE2, designated SEQ ID:19462 and SEQ ID:2645 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:246.

[29988] Another function of GAM189 is therefore inhibition of LOC284405 (Accession XP_209183.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284405.

[29989] LOC284408 (Accession XP_211443.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284408 BINDING SITE, designated SEQ ID:14364, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29990] Another function of GAM189 is therefore inhibition of LOC284408 (Accession XP_211443.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284408.

[29991] LOC284410 (Accession XP_211449.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284410

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284410, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284410 BINDING SITE, designated SEQ ID:17304, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29992] Another function of GAM189 is therefore inhibition of LOC284410 (Accession XP_211449.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284410.

[29993] LOC284421 (Accession XP_209200.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284421 BINDING SITE1 and LOC284421 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284421, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284421 BINDING SITE1 and LOC284421 BINDING SITE2, designated SEQ ID:4533 and SEQ ID:15844 respectively, to the nucleotide se-

quence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29994] Another function of GAM189 is therefore inhibition of LOC284421 (Accession XP_209200.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284421.

[29995] LOC284421 (Accession XP_209200.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284421 BINDING SITE1 and LOC284421 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284421, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284421 BINDING SITE1 and LOC284421 BINDING SITE2, designated SEQ ID:15844 and SEQ ID:4975 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29996] Another function of GAM189 is therefore inhibition of LOC284421 (Accession XP_209200.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284421.

[29997] LOC284426 (Accession XP_209198.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284426 BINDING SITE1 through LOC284426 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284426, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284426 BINDING SITE1 through LOC284426 BINDING SITE3, designated SEQ ID:5357, SEQ ID:13177 and SEQ ID:8752 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[29998] Another function of GAM189 is therefore inhibition of LOC284426 (Accession XP_209198.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284426.

[29999] LOC284454 (Accession XP_209216.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284454 BINDING SITE1 through LOC284454 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284454, corresponding to target

binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284454 BINDING SITE1 through LOC284454 BINDING SITE3, designated SEQ ID:3999, SEQ ID:19117 and SEQ ID:16031 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30000] Another function of GAM189 is therefore inhibition of LOC284454 (Accession XP_209216.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284454.

[30001] LOC284456 (Accession XP_211470.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284456 BINDING SITE, designated SEQ ID:18777, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30002] Another function of GAM189 is therefore inhibition of

LOC284456 (Accession XP_211470.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284456.

[30003] LOC284471 (Accession XP_209225.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284471 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284471, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284471 BINDING SITE, designated SEQ ID:19286, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30004] Another function of GAM189 is therefore inhibition of LOC284471 (Accession XP_209225.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284471.

[30005] LOC284512 (Accession XP_211500.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284512 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284512, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284512 BINDING SITE, designated SEQ ID:14119, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30006] Another function of GAM189 is therefore inhibition of LOC284512 (Accession XP_211500.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284512.

[30007] LOC284513 (Accession XP_211502.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284513 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284513, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284513 BINDING SITE, designated SEQ ID:18865, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30008] Another function of GAM189 is therefore inhibition of LOC284513 (Accession XP_211502.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284513.

[30009] LOC284549 (Accession XP_211514.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284549 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284549, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284549 BINDING SITE, designated SEQ ID:19112, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30010] Another function of GAM189 is therefore inhibition of LOC284549 (Accession XP_211514.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284549.

[30011] LOC284551 (Accession XP_211515.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284551 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284551, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284551 BINDING SITE, designated SEQ ID:9493, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30012] Another function of GAM189 is therefore inhibition of LOC284551 (Accession XP_211515.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284551.

[30013] LOC284577 (Accession XP_211522.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284577 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284577, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284577 BINDING SITE, designated SEQ ID:19533, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30014] Another function of GAM189 is therefore inhibition of LOC284577 (Accession XP_211522.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284577.

[30015] LOC284587 (Accession XP_209278.3) is another GAM189 target gene, herein designated TARGET GENE. LOC284587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284587 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30016] Another function of GAM189 is therefore inhibition of LOC284587 (Accession XP_209278.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284587.

[30017] LOC284611 (Accession XP_211552.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284611 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284611, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC284611 BINDING SITE, designated SEQ ID:12497, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30018] Another function of GAM189 is therefore inhibition of LOC284611 (Accession XP_211552.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284611.

[30019] LOC284628 (Accession XP_211561.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284628 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284628, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284628 BINDING SITE, designated SEQ ID:18882, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30020] Another function of GAM189 is therefore inhibition of LOC284628 (Accession XP_211561.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284628.

[30021] LOC284675 (Accession XP_209319.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284675 BINDING SITE1 and LOC284675 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284675, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284675 BINDING SITE1 and LOC284675 BINDING SITE2, designated SEQ ID:2389 and SEQ ID:501 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30022] Another function of GAM189 is therefore inhibition of LOC284675 (Accession XP_209319.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284675.

[30023] LOC284683 (Accession XP_208236.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284683 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284683, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284683 BINDING SITE, designated SEQ ID:5926, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30024] Another function of GAM189 is therefore inhibition of LOC284683 (Accession XP_208236.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284683.

[30025] LOC284701 (Accession XP_294994.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284701 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284701, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284701 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30026] Another function of GAM189 is therefore inhibition of LOC284701 (Accession XP_294994.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284701.

[30027] LOC284708 (Accession XP_209332.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284708 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284708 BINDING SITE, designated SEQ ID:5153, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30028] Another function of GAM189 is therefore inhibition of LOC284708 (Accession XP_209332.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284708.

[30029] LOC284723 (Accession XP_211602.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284723 BINDING SITE1 through LOC284723 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284723, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284723 BINDING SITE1 through LOC284723 BINDING SITE3, designated SEQ ID:6498, SEQ ID:3182 and SEQ ID:2215 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30030] Another function of GAM189 is therefore inhibition of LOC284723 (Accession XP_211602.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284723.

[30031] LOC284805 (Accession XP_209371.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284805 BINDING SITE1 through LOC284805 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284805, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284805 BINDING SITE1 through LOC284805 BINDING SITE3, designated SEQ ID:8046, SEQ ID:853 and SEQ ID:1544 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30032] Another function of GAM189 is therefore inhibition of LOC284805 (Accession XP_209371.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284805.

[30033] LOC284839 (Accession XP_211661.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284839 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284839, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284839 BINDING SITE, designated SEQ ID:19401, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30034] Another function of GAM189 is therefore inhibition of LOC284839 (Accession XP_211661.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284839.

[30035] LOC284853 (Accession XP_209383.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284853 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC284853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284853 BINDING SITE, designated SEQ ID:3582, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30036] Another function of GAM189 is therefore inhibition of LOC284853 (Accession XP_209383.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284853.

[30037] LOC284856 (Accession XP_302835.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284856 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC284856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284856 BINDING SITE, designated SEQ ID:12736, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30038] Another function of GAM189 is therefore inhibition of LOC284856 (Accession XP_302835.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284856.

[30039] LOC284856 (Accession XP_211668.2) is another GAM189 target gene, herein designated TARGET GENE. LOC284856 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC284856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284856 BINDING SITE, designated SEQ ID:12736, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30040] Another function of GAM189 is therefore inhibition of LOC284856 (Accession XP_211668.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284856.

[30041] LOC284859 (Accession XP_209384.2) is another GAM189 target gene, herein designated TARGET GENE. LOC284859

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284859, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284859 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30042] Another function of GAM189 is therefore inhibition of LOC284859 (Accession XP_209384.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284859.

[30043] LOC284861 (Accession XP_211670.2) is another GAM189 target gene, herein designated TARGET GENE. LOC284861 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284861 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30044] Another function of GAM189 is therefore inhibition of LOC284861 (Accession XP_211670.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284861.

[30045] LOC284865 (Accession XP_211672.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284865 BINDING SITE, designated SEQ ID:1645, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30046] Another function of GAM189 is therefore inhibition of LOC284865 (Accession XP_211672.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284865.

[30047] LOC284873 (Accession XP_209412.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284873 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC284873, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284873 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30048] Another function of GAM189 is therefore inhibition of LOC284873 (Accession XP_209412.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284873.

[30049] LOC284874 (Accession XP_209394.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284874 BINDING SITE1 and LOC284874 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284874, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284874 BINDING SITE1 and LOC284874 BINDING SITE2, designated SEQ ID:3846 and SEQ ID:16244 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA,

also designated SEQ ID:246.

[30050] Another function of GAM189 is therefore inhibition of LOC284874 (Accession XP_209394.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284874.

[30051] LOC284934 (Accession XP_211696.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284934 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284934, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284934 BINDING SITE, designated SEQ ID:14894, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30052] Another function of GAM189 is therefore inhibition of LOC284934 (Accession XP_211696.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284934.

[30053] LOC284947 (Accession XP_211705.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284947

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284947, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284947 BINDING SITE, designated SEQ ID:5465, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30054] Another function of GAM189 is therefore inhibition of LOC284947 (Accession XP_211705.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284947.

[30055] LOC284950 (Accession XP_211703.1) is another GAM189 target gene, herein designated TARGET GENE. LOC284950 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284950, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284950 BINDING SITE, designated SEQ ID:4025, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30056] Another function of GAM189 is therefore inhibition of LOC284950 (Accession XP_211703.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284950.

[30057] LOC285002 (Accession XP_211731.2) is another GAM189 target gene, herein designated TARGET GENE. LOC285002 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285002, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285002 BINDING SITE, designated SEQ ID:3500, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30058] Another function of GAM189 is therefore inhibition of LOC285002 (Accession XP_211731.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285002.

[30059] LOC285026 (Accession XP_209440.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285026 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC285026, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285026 BINDING SITE, designated SEQ ID:17523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30060] Another function of GAM189 is therefore inhibition of LOC285026 (Accession XP_209440.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285026.

[30061] LOC285052 (Accession XP_211751.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285052 BINDING SITE, designated SEQ ID:2174, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30062] Another function of GAM189 is therefore inhibition of

LOC285052 (Accession XP_211751.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285052.

[30063] LOC285058 (Accession XP_211753.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285058 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285058 BINDING SITE, designated SEQ ID:20023, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30064] Another function of GAM189 is therefore inhibition of LOC285058 (Accession XP_211753.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285058.

[30065] LOC285083 (Accession XP_209464.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285083 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285083, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285083 BINDING SITE, designated SEQ ID:5667, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30066] Another function of GAM189 is therefore inhibition of LOC285083 (Accession XP_209464.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285083.

[30067] LOC285088 (Accession XP_209465.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285088 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285088, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285088 BINDING SITE, designated SEQ ID:6092, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30068] Another function of GAM189 is therefore inhibition of LOC285088 (Accession XP_209465.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285088.

[30069] LOC285123 (Accession XP_211773.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285123 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285123 BINDING SITE, designated SEQ ID:17113, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30070] Another function of GAM189 is therefore inhibition of LOC285123 (Accession XP_211773.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285123.

[30071] LOC285127 (Accession XP_211771.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285127 BINDING SITE1 and LOC285127 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285127, corresponding to target binding

sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285127 BINDING SITE1 and LOC285127 BINDING SITE2, designated SEQ ID:11528 and SEQ ID:5921 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30072] Another function of GAM189 is therefore inhibition of LOC285127 (Accession XP_211771.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285127.

[30073] LOC285166 (Accession XP_211791.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285166 BINDING SITE, designated SEQ ID:4283, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30074] Another function of GAM189 is therefore inhibition of

LOC285166 (Accession XP_211791.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285166.

[30075] LOC285176 (Accession XP_209500.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285176 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285176, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285176 BINDING SITE, designated SEQ ID:7860, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30076] Another function of GAM189 is therefore inhibition of LOC285176 (Accession XP_209500.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285176.

[30077] LOC285193 (Accession XP_209509.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285193 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285193, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285193 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30078] Another function of GAM189 is therefore inhibition of LOC285193 (Accession XP_209509.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285193.

[30079] LOC285221 (Accession XP_209521.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285221 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285221, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285221 BINDING SITE, designated SEQ ID:13597, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30080] Another function of GAM189 is therefore inhibition of LOC285221 (Accession XP_209521.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285221.

[30081] LOC285231 (Accession XP_211813.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285231 BINDING SITE1 through LOC285231 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC285231, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285231 BINDING SITE1 through LOC285231 BINDING SITE3, designated SEQ ID:8001, SEQ ID:8001 and SEQ ID:15366 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30082] Another function of GAM189 is therefore inhibition of LOC285231 (Accession XP_211813.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285231.

[30083] LOC285231 (Accession XP_211813.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285231 BINDING SITE1 through LOC285231 BINDING SITE3 are

target binding sites found in untranslated regions of mRNA encoded by LOC285231, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285231 BINDING SITE1 through LOC285231 BINDING SITE3, designated SEQ ID:9352, SEQ ID:15575 and SEQ ID:9374 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30084] Another function of GAM189 is therefore inhibition of LOC285231 (Accession XP_211813.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285231.

[30085] LOC285334 (Accession XP_211844.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285334 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285334 BINDING SITE, designated SEQ ID:1027, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30086] Another function of GAM189 is therefore inhibition of LOC285334 (Accession XP_211844.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285334.

[30087] LOC285345 (Accession XP_211854.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285345 BINDING SITE1 and LOC285345 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285345, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285345 BINDING SITE1 and LOC285345 BINDING SITE2, designated SEQ ID:556 and SEQ ID:18883 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30088] Another function of GAM189 is therefore inhibition of LOC285345 (Accession XP_211854.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285345.

[30089] LOC285366 (Accession XP_209581.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285366 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285366, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285366 BINDING SITE, designated SEQ ID:6117, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30090] Another function of GAM189 is therefore inhibition of LOC285366 (Accession XP_209581.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285366.

[30091] LOC285369 (Accession XP_211861.3) is another GAM189 target gene, herein designated TARGET GENE. LOC285369 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285369, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285369 BINDING SITE, designated SEQ ID:10352, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30092] Another function of GAM189 is therefore inhibition of LOC285369 (Accession XP_211861.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285369.

[30093] LOC285389 (Accession XP_211873.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285389 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285389, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285389 BINDING SITE, designated SEQ ID:19692, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30094] Another function of GAM189 is therefore inhibition of LOC285389 (Accession XP_211873.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285389.

[30095] LOC285392 (Accession XP_211879.1) is another GAM189

target gene, herein designated TARGET GENE. LOC285392 BINDING SITE1 and LOC285392 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285392, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285392 BINDING SITE1 and LOC285392 BINDING SITE2, designated SEQ ID:9688 and SEQ ID:17969 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30096] Another function of GAM189 is therefore inhibition of LOC285392 (Accession XP_211879.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285392.

[30097] LOC285398 (Accession XP_209593.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285398 BINDING SITE1 and LOC285398 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285398, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC285398 BINDING SITE1 and LOC285398 BINDING SITE2, designated SEQ ID:4655 and SEQ ID:13286 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30098] Another function of GAM189 is therefore inhibition of LOC285398 (Accession XP_209593.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285398.

[30099] LOC285429 (Accession XP_209607.3) is another GAM189 target gene, herein designated TARGET GENE. LOC285429 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285429, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285429 BINDING SITE, designated SEQ ID:4171, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30100] Another function of GAM189 is therefore inhibition of LOC285429 (Accession XP_209607.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285429.

[30101] LOC285488 (Accession XP_211914.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285488 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285488, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285488 BINDING SITE, designated SEQ ID:13804, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30102] Another function of GAM189 is therefore inhibition of LOC285488 (Accession XP_211914.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285488.

[30103] LOC285491 (Accession XP_211917.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285491 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285491, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285491 BINDING SITE, designated SEQ ID:11239, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30104] Another function of GAM189 is therefore inhibition of LOC285491 (Accession XP_211917.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285491.

[30105] LOC285509 (Accession XP_211923.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285509 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285509, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285509 BINDING SITE, designated SEQ ID:3519, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30106] Another function of GAM189 is therefore inhibition of LOC285509 (Accession XP_211923.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285509.

[30107] LOC285510 (Accession XP_209643.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285510 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285510, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285510 BINDING SITE, designated SEQ ID:14552, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30108] Another function of GAM189 is therefore inhibition of LOC285510 (Accession XP_209643.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285510.

[30109] LOC285540 (Accession XP_209654.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285540 BINDING SITE1 and LOC285540 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285540, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC285540 BINDING SITE1 and LOC285540 BINDING SITE2, designated SEQ ID:6961 and SEQ ID:9543 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30110] Another function of GAM189 is therefore inhibition of LOC285540 (Accession XP_209654.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285540.

[30111] LOC285560 (Accession XP_209660.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285560 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285560, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285560 BINDING SITE, designated SEQ ID:8718, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30112] Another function of GAM189 is therefore inhibition of LOC285560 (Accession XP_209660.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285560.

[30113] LOC285589 (Accession XP_209671.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285589 BINDING SITE1 and LOC285589 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285589, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285589 BINDING SITE1 and LOC285589 BINDING SITE2, designated SEQ ID:17087 and SEQ ID:12804 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30114] Another function of GAM189 is therefore inhibition of LOC285589 (Accession XP_209671.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285589.

[30115] LOC285626 (Accession XP_211959.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285626 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285626, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285626 BINDING SITE, designated SEQ ID:13843, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30116] Another function of GAM189 is therefore inhibition of LOC285626 (Accession XP_211959.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285626.

[30117] LOC285638 (Accession XP_209693.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285638 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285638, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285638 BINDING SITE, designated SEQ ID:4949, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30118] Another function of GAM189 is therefore inhibition of LOC285638 (Accession XP_209693.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285638.

[30119] LOC285679 (Accession XP_209719.2) is another GAM189 target gene, herein designated TARGET GENE. LOC285679 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285679, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285679 BINDING SITE, designated SEQ ID:19299, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30120] Another function of GAM189 is therefore inhibition of LOC285679 (Accession XP_209719.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285679.

[30121] LOC285689 (Accession XP_209724.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285689 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285689, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285689 BINDING SITE, designated SEQ ID:17726, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30122] Another function of GAM189 is therefore inhibition of LOC285689 (Accession XP_209724.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285689.

[30123] LOC285693 (Accession XP_211981.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285693 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285693 BINDING SITE, designated SEQ ID:16940, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30124] Another function of GAM189 is therefore inhibition of LOC285693 (Accession XP_211981.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285693.

[30125] LOC285722 (Accession XP_211997.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285722 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285722, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285722 BINDING SITE, designated SEQ ID:18012, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30126] Another function of GAM189 is therefore inhibition of LOC285722 (Accession XP_211997.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285722.

[30127] LOC285744 (Accession XP_209743.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285744 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285744, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285744 BINDING SITE, designated SEQ ID:11141, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30128] Another function of GAM189 is therefore inhibition of LOC285744 (Accession XP_209743.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285744.

[30129] LOC285747 (Accession XP_209742.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285747 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285747 BINDING SITE, designated SEQ ID:11528, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30130] Another function of GAM189 is therefore inhibition of LOC285747 (Accession XP_209742.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285747.

[30131] LOC285760 (Accession XP_209750.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285760 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285760, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285760 BINDING SITE, designated SEQ ID:13412, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30132] Another function of GAM189 is therefore inhibition of LOC285760 (Accession XP_209750.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285760.

[30133] LOC285777 (Accession XP_212013.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285777 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285777, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC285777 BINDING SITE, designated SEQ ID:16810, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30134] Another function of GAM189 is therefore inhibition of LOC285777 (Accession XP_212013.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285777.

[30135] LOC285812 (Accession XP_212055.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285812 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285812 BINDING SITE, designated SEQ ID:559, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30136] Another function of GAM189 is therefore inhibition of LOC285812 (Accession XP_212055.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285812.

[30137] LOC285813 (Accession XP_212036.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285813 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285813 BINDING SITE, designated SEQ ID:12389, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30138] Another function of GAM189 is therefore inhibition of LOC285813 (Accession XP_212036.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285813.

[30139] LOC285822 (Accession XP_209777.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285822 BINDING SITE1 and LOC285822 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285822, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285822 BINDING SITE1

and LOC285822 BINDING SITE2, designated SEQ ID:1847 and SEQ ID:9753 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30140] Another function of GAM189 is therefore inhibition of LOC285822 (Accession XP_209777.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285822.

[30141] LOC285830 (Accession XP_212043.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285830 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285830, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285830 BINDING SITE, designated SEQ ID:986, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30142] Another function of GAM189 is therefore inhibition of LOC285830 (Accession XP_212043.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285830.

[30143] LOC285843 (Accession XP_212034.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285843 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285843, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285843 BINDING SITE, designated SEQ ID:17964, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30144] Another function of GAM189 is therefore inhibition of LOC285843 (Accession XP_212034.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285843.

[30145] LOC285847 (Accession XP_212045.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285847 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285847, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC285847 BINDING SITE, designated SEQ ID:18945, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30146] Another function of GAM189 is therefore inhibition of LOC285847 (Accession XP_212045.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285847.

[30147] LOC285872 (Accession XP_212061.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285872 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285872, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285872 BINDING SITE, designated SEQ ID:10885, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30148] Another function of GAM189 is therefore inhibition of LOC285872 (Accession XP_212061.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285872.

[30149] LOC285914 (Accession XP_209810.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285914 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285914, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285914 BINDING SITE, designated SEQ ID:6188, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30150] Another function of GAM189 is therefore inhibition of LOC285914 (Accession XP_209810.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285914.

[30151] LOC285923 (Accession XP_212104.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285923 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285923, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285923 BINDING SITE, designated SEQ ID:19536, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30152] Another function of GAM189 is therefore inhibition of LOC285923 (Accession XP_212104.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285923.

[30153] LOC285924 (Accession XP_209816.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285924 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285924, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285924 BINDING SITE, designated SEQ ID:17126, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30154] Another function of GAM189 is therefore inhibition of LOC285924 (Accession XP_209816.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285924.

[30155] LOC285945 (Accession XP_212092.1) is another GAM189

target gene, herein designated TARGET GENE. LOC285945 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285945, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285945 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30156] Another function of GAM189 is therefore inhibition of LOC285945 (Accession XP_212092.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285945.

[30157] LOC285952 (Accession XP_209821.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285952 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285952 BINDING SITE, designated SEQ ID:15323, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30158] Another function of GAM189 is therefore inhibition of LOC285952 (Accession XP_209821.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285952.

[30159] LOC285961 (Accession XP_209833.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285961 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285961, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285961 BINDING SITE, designated SEQ ID:2604, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30160] Another function of GAM189 is therefore inhibition of LOC285961 (Accession XP_209833.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285961.

[30161] LOC285972 (Accession XP_212105.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285972

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285972 BINDING SITE, designated SEQ ID:5318, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30162] Another function of GAM189 is therefore inhibition of LOC285972 (Accession XP_212105.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285972.

[30163] LOC285979 (Accession XP_212117.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285979 BINDING SITE1 and LOC285979 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285979, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285979 BINDING SITE1 and LOC285979 BINDING SITE2, designated SEQ ID:1397 and SEQ ID:6388 respectively, to the nucleotide sequence

of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30164] Another function of GAM189 is therefore inhibition of LOC285979 (Accession XP_212117.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285979.

[30165] LOC285989 (Accession XP_212111.1) is another GAM189 target gene, herein designated TARGET GENE. LOC285989 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285989, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285989 BINDING SITE, designated SEQ ID:11742, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30166] Another function of GAM189 is therefore inhibition of LOC285989 (Accession XP_212111.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285989.

[30167] LOC285999 (Accession XP_212120.1) is another GAM189

target gene, herein designated TARGET GENE. LOC285999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285999 BINDING SITE, designated SEQ ID:3647, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30168] Another function of GAM189 is therefore inhibition of LOC285999 (Accession XP_212120.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285999.

[30169] LOC286029 (Accession XP_209866.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286029 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286029, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286029 BINDING SITE, designated SEQ ID:15231, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30170] Another function of GAM189 is therefore inhibition of LOC286029 (Accession XP_209866.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286029.

[30171] LOC286030 (Accession XP_209868.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286030 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286030, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286030 BINDING SITE, designated SEQ ID:2244, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30172] Another function of GAM189 is therefore inhibition of LOC286030 (Accession XP_209868.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286030.

[30173] LOC286039 (Accession XP_209873.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286039

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286039 BINDING SITE, designated SEQ ID:11035, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30174] Another function of GAM189 is therefore inhibition of LOC286039 (Accession XP_209873.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286039.

[30175] LOC286052 (Accession XP_212152.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286052 BINDING SITE, designated SEQ ID:9367, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30176] Another function of GAM189 is therefore inhibition of LOC286052 (Accession XP_212152.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286052.

[30177] LOC286075 (Accession NP_776192.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286075 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286075, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286075 BINDING SITE, designated SEQ ID:17965, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30178] Another function of GAM189 is therefore inhibition of LOC286075 (Accession NP_776192.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286075.

[30179] LOC286078 (Accession XP_212163.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286078 BINDING SITE1 through LOC286078 BINDING SITE5 are

target binding sites found in untranslated regions of mRNA encoded by LOC286078, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286078 BINDING SITE1 through LOC286078 BINDING SITE5, designated SEQ ID:15589, SEQ ID:16716, SEQ ID:15083, SEQ ID:3810 and SEQ ID:13100 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30180] Another function of GAM189 is therefore inhibition of LOC286078 (Accession XP_212163.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286078.

[30181] LOC286090 (Accession XP_212166.3) is another GAM189 target gene, herein designated TARGET GENE. LOC286090 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286090, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286090 BINDING SITE, designated SEQ ID:16409, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30182] Another function of GAM189 is therefore inhibition of LOC286090 (Accession XP_212166.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286090.

[30183] LOC286126 (Accession XP_212185.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286126 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286126, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286126 BINDING SITE, designated SEQ ID:7847, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30184] Another function of GAM189 is therefore inhibition of LOC286126 (Accession XP_212185.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286126.

[30185] LOC286132 (Accession XP_212194.1) is another GAM189

target gene, herein designated TARGET GENE. LOC286132 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286132 BINDING SITE, designated SEQ ID:7113, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30186] Another function of GAM189 is therefore inhibition of LOC286132 (Accession XP_212194.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286132.

[30187] LOC286135 (Accession XP_212196.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286135 BINDING SITE, designated SEQ ID:9746, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30188] Another function of GAM189 is therefore inhibition of LOC286135 (Accession XP_212196.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286135.

[30189] LOC286166 (Accession XP_209925.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286166 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286166 BINDING SITE, designated SEQ ID:3927, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30190] Another function of GAM189 is therefore inhibition of LOC286166 (Accession XP_209925.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286166.

[30191] LOC286170 (Accession XP_212211.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286170

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286170 BINDING SITE, designated SEQ ID:8426, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30192] Another function of GAM189 is therefore inhibition of LOC286170 (Accession XP_212211.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286170.

[30193] LOC286186 (Accession XP_212219.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286186 BINDING SITE1 and LOC286186 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286186, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286186 BINDING SITE1 and LOC286186 BINDING SITE2, designated SEQ ID:18020 and SEQ ID:3430 respectively, to the nucleotide sequence

of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30194] Another function of GAM189 is therefore inhibition of LOC286186 (Accession XP_212219.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286186.

[30195] LOC286206 (Accession XP_209953.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286206 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286206, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286206 BINDING SITE, designated SEQ ID:2600, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30196] Another function of GAM189 is therefore inhibition of LOC286206 (Accession XP_209953.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286206.

[30197] LOC286207 (Accession XP_209941.1) is another GAM189

target gene, herein designated TARGET GENE. LOC286207 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286207, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286207 BINDING SITE, designated SEQ ID:19893, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30198] Another function of GAM189 is therefore inhibition of LOC286207 (Accession XP_209941.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286207.

[30199] LOC286208 (Accession XP_212230.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286208 BINDING SITE1 through LOC286208 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC286208, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286208 BINDING SITE1 through LOC286208 BINDING SITE3, des-

ignated SEQ ID:2849, SEQ ID:4372 and SEQ ID:9724 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30200] Another function of GAM189 is therefore inhibition of LOC286208 (Accession XP_212230.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286208.

[30201] LOC286215 (Accession XP_212228.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286215 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286215, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286215 BINDING SITE, designated SEQ ID:19240, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30202] Another function of GAM189 is therefore inhibition of LOC286215 (Accession XP_212228.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286215.

[30203] LOC286221 (Accession XP_212233.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286221 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286221, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286221 BINDING SITE, designated SEQ ID:7774, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30204] Another function of GAM189 is therefore inhibition of LOC286221 (Accession XP_212233.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286221.

[30205] LOC286223 (Accession XP_209956.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286223 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286223, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286223 BINDING SITE, designated SEQ ID:6118, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30206] Another function of GAM189 is therefore inhibition of LOC286223 (Accession XP_209956.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286223.

[30207] LOC286245 (Accession XP_212244.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286245 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286245, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286245 BINDING SITE, designated SEQ ID:6868, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30208] Another function of GAM189 is therefore inhibition of LOC286245 (Accession XP_212244.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286245.

[30209] LOC286341 (Accession XP_212278.1) is another GAM189

target gene, herein designated TARGET GENE. LOC286341 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286341, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286341 BINDING SITE, designated SEQ ID:15975, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30210] Another function of GAM189 is therefore inhibition of LOC286341 (Accession XP_212278.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286341.

[30211] LOC286347 (Accession XP_208408.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286347 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286347, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286347 BINDING SITE, designated SEQ ID:522, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30212] Another function of GAM189 is therefore inhibition of LOC286347 (Accession XP_208408.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286347.

[30213] LOC286354 (Accession XP_212286.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286354 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286354, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286354 BINDING SITE, designated SEQ ID:15730, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30214] Another function of GAM189 is therefore inhibition of LOC286354 (Accession XP_212286.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286354.

[30215] LOC286356 (Accession XP_212290.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286356

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286356 BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30216] Another function of GAM189 is therefore inhibition of LOC286356 (Accession XP_212290.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286356.

[30217] LOC286357 (Accession XP_212285.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286357 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286357, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286357 BINDING SITE, designated SEQ ID:14974, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30218] Another function of GAM189 is therefore inhibition of LOC286357 (Accession XP_212285.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286357.

[30219] LOC286371 (Accession XP_212291.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286371 BINDING SITE, designated SEQ ID:3785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30220] Another function of GAM189 is therefore inhibition of LOC286371 (Accession XP_212291.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286371.

[30221] LOC286395 (Accession XP_212308.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286395 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC286395, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286395 BINDING SITE, designated SEQ ID:2722, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30222] Another function of GAM189 is therefore inhibition of LOC286395 (Accession XP_212308.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286395.

[30223] LOC286401 (Accession XP_212310.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286401 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286401, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286401 BINDING SITE, designated SEQ ID:1038, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30224] Another function of GAM189 is therefore inhibition of

LOC286401 (Accession XP_212310.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286401.

[30225] LOC286441 (Accession XP_212319.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286441 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286441 BINDING SITE, designated SEQ ID:2754, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30226] Another function of GAM189 is therefore inhibition of LOC286441 (Accession XP_212319.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286441.

[30227] LOC286467 (Accession XP_210063.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286467, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286467 BINDING SITE, designated SEQ ID:9580, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30228] Another function of GAM189 is therefore inhibition of LOC286467 (Accession XP_210063.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286467.

[30229] LOC286553 (Accession XP_212340.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286553 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286553, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286553 BINDING SITE, designated SEQ ID:3183, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30230] Another function of GAM189 is therefore inhibition of LOC286553 (Accession XP_212340.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286553.

[30231] LOC286558 (Accession XP_210106.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286558 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286558, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286558 BINDING SITE, designated SEQ ID:9264, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30232] Another function of GAM189 is therefore inhibition of LOC286558 (Accession XP_210106.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286558.

[30233] LOC286564 (Accession XP_210108.1) is another GAM189 target gene, herein designated TARGET GENE. LOC286564 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286564, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286564 BINDING SITE, designated SEQ ID:9264, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30234] Another function of GAM189 is therefore inhibition of LOC286564 (Accession XP_210108.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286564.

[30235] LOC338562 (Accession XP_294654.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338562 BINDING SITE, designated SEQ ID:13760, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30236] Another function of GAM189 is therefore inhibition of LOC338562 (Accession XP_294654.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC338562.

[30237] LOC338565 (Accession XP_294653.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338565 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338565, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338565 BINDING SITE, designated SEQ ID:12867, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30238] Another function of GAM189 is therefore inhibition of LOC338565 (Accession XP_294653.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338565.

[30239] LOC338575 (Accession XP_290473.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338575 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338575, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC338575 BINDING SITE, designated SEQ ID:14074, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30240] Another function of GAM189 is therefore inhibition of LOC338575 (Accession XP_290473.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338575.

[30241] LOC338579 (Accession XP_290472.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338579 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338579, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338579 BINDING SITE, designated SEQ ID:4528, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30242] Another function of GAM189 is therefore inhibition of LOC338579 (Accession XP_290472.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC338579.

[30243] LOC338585 (Accession XP_294658.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338585 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338585, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338585 BINDING SITE, designated SEQ ID:7523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30244] Another function of GAM189 is therefore inhibition of LOC338585 (Accession XP_294658.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338585.

[30245] LOC338645 (Accession XP_290494.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338645 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338645, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC338645 BINDING SITE, designated SEQ ID:6626, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30246] Another function of GAM189 is therefore inhibition of LOC338645 (Accession XP_290494.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338645.

[30247] LOC338709 (Accession XP_211595.2) is another GAM189 target gene, herein designated TARGET GENE. LOC338709 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338709 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30248] Another function of GAM189 is therefore inhibition of LOC338709 (Accession XP_211595.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338709.

[30249] LOC338731 (Accession XP_294688.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338731 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338731 BINDING SITE, designated SEQ ID:6518, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30250] Another function of GAM189 is therefore inhibition of LOC338731 (Accession XP_294688.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338731.

[30251] LOC338739 (Accession XP_294690.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338739 BINDING SITE1 and LOC338739 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338739, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338739 BINDING SITE1

and LOC338739 BINDING SITE2, designated SEQ ID:15044 and SEQ ID:14732 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30252] Another function of GAM189 is therefore inhibition of LOC338739 (Accession XP_294690.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338739.

[30253] LOC338773 (Accession XP_290570.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338773 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338773, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338773 BINDING SITE, designated SEQ ID:16493, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30254] Another function of GAM189 is therefore inhibition of LOC338773 (Accession XP_290570.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC338773.

[30255] LOC338819 (Accession XP_290216.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338819 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338819 BINDING SITE, designated SEQ ID:11507, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30256] Another function of GAM189 is therefore inhibition of LOC338819 (Accession XP_290216.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338819.

[30257] LOC338899 (Accession XP_294740.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338899 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC338899 BINDING SITE, designated SEQ ID:12341, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30258] Another function of GAM189 is therefore inhibition of LOC338899 (Accession XP_294740.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338899.

[30259] LOC338923 (Accession XP_294742.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338923 BINDING SITE1 and LOC338923 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338923, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338923 BINDING SITE1 and LOC338923 BINDING SITE2, designated SEQ ID:8559 and SEQ ID:4298 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30260] Another function of GAM189 is therefore inhibition of LOC338923 (Accession XP_294742.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC338923.

[30261] LOC338963 (Accession XP_294757.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338963 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338963, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338963 BINDING SITE, designated SEQ ID:3348, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30262] Another function of GAM189 is therefore inhibition of LOC338963 (Accession XP_294757.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338963.

[30263] LOC338991 (Accession XP_290663.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338991 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338991, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC338991 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30264] Another function of GAM189 is therefore inhibition of LOC338991 (Accession XP_290663.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338991.

[30265] LOC338999 (Accession XP_290659.1) is another GAM189 target gene, herein designated TARGET GENE. LOC338999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338999 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30266] Another function of GAM189 is therefore inhibition of LOC338999 (Accession XP_290659.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC338999.

[30267] LOC339077 (Accession XP_294802.2) is another GAM189 target gene, herein designated TARGET GENE. LOC339077 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339077, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339077 BINDING SITE, designated SEQ ID:17484, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30268] Another function of GAM189 is therefore inhibition of LOC339077 (Accession XP_294802.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339077.

[30269] LOC339078 (Accession XP_290692.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339078 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC339078 BINDING SITE, designated SEQ ID:9543, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30270] Another function of GAM189 is therefore inhibition of LOC339078 (Accession XP_290692.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339078.

[30271] LOC339083 (Accession XP_290697.2) is another GAM189 target gene, herein designated TARGET GENE. LOC339083 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339083, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339083 BINDING SITE, designated SEQ ID:1843, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30272] Another function of GAM189 is therefore inhibition of LOC339083 (Accession XP_290697.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339083.

[30273] LOC339108 (Accession XP_290711.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339108 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339108, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339108 BINDING SITE, designated SEQ ID:14266, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30274] Another function of GAM189 is therefore inhibition of LOC339108 (Accession XP_290711.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339108.

[30275] LOC339146 (Accession XP_294825.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339146 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339146 BINDING SITE, designated SEQ ID:15614, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30276] Another function of GAM189 is therefore inhibition of LOC339146 (Accession XP_294825.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339146.

[30277] LOC339178 (Accession XP_290742.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339178 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339178 BINDING SITE, designated SEQ ID:16261, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30278] Another function of GAM189 is therefore inhibition of LOC339178 (Accession XP_290742.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339178.

[30279] LOC339201 (Accession XP_290756.1) is another GAM189

target gene, herein designated TARGET GENE. LOC339201 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339201 BINDING SITE, designated SEQ ID:4056, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30280] Another function of GAM189 is therefore inhibition of LOC339201 (Accession XP_290756.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339201.

[30281] LOC339216 (Accession XP_290762.2) is another GAM189 target gene, herein designated TARGET GENE. LOC339216 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339216, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339216 BINDING SITE, designated SEQ ID:19537, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30282] Another function of GAM189 is therefore inhibition of LOC339216 (Accession XP_290762.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339216.

[30283] LOC339248 (Accession XP_294879.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339248 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339248 BINDING SITE, designated SEQ ID:19597, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30284] Another function of GAM189 is therefore inhibition of LOC339248 (Accession XP_294879.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339248.

[30285] LOC339250 (Accession XP_294883.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339250

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339250, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339250 BINDING SITE, designated SEQ ID:19597, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30286] Another function of GAM189 is therefore inhibition of LOC339250 (Accession XP_294883.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339250.

[30287] LOC339282 (Accession XP_294900.2) is another GAM189 target gene, herein designated TARGET GENE. LOC339282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339282 BINDING SITE, designated SEQ ID:19537, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30288] Another function of GAM189 is therefore inhibition of LOC339282 (Accession XP_294900.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339282.

[30289] LOC339283 (Accession XP_294899.2) is another GAM189 target gene, herein designated TARGET GENE. LOC339283 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339283, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339283 BINDING SITE, designated SEQ ID:11314, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30290] Another function of GAM189 is therefore inhibition of LOC339283 (Accession XP_294899.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339283.

[30291] LOC339324 (Accession XP_290838.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339324 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC339324, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339324 BINDING SITE, designated SEQ ID:9544, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30292] Another function of GAM189 is therefore inhibition of LOC339324 (Accession XP_290838.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339324.

[30293] LOC339325 (Accession XP_290830.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339325 BINDING SITE1 and LOC339325 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339325, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339325 BINDING SITE1 and LOC339325 BINDING SITE2, designated SEQ ID:17114 and SEQ ID:16940 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA,

also designated SEQ ID:246.

[30294] Another function of GAM189 is therefore inhibition of LOC339325 (Accession XP_290830.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339325.

[30295] LOC339417 (Accession XP_294944.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339417 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339417, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339417 BINDING SITE, designated SEQ ID:2027, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30296] Another function of GAM189 is therefore inhibition of LOC339417 (Accession XP_294944.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339417.

[30297] LOC339448 (Accession XP_290902.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339448

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339448, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339448 BINDING SITE, designated SEQ ID:10679, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30298] Another function of GAM189 is therefore inhibition of LOC339448 (Accession XP_290902.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339448.

[30299] LOC339458 (Accession XP_290911.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339458 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339458, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339458 BINDING SITE, designated SEQ ID:5488, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30300] Another function of GAM189 is therefore inhibition of LOC339458 (Accession XP_290911.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339458.

[30301] LOC339459 (Accession XP_290907.2) is another GAM189 target gene, herein designated TARGET GENE. LOC339459 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339459 BINDING SITE, designated SEQ ID:13513, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30302] Another function of GAM189 is therefore inhibition of LOC339459 (Accession XP_290907.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339459.

[30303] LOC339492 (Accession XP_290919.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339492 BINDING SITE1 through LOC339492 BINDING SITE3 are

target binding sites found in untranslated regions of mRNA encoded by LOC339492, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339492 BINDING SITE1 through LOC339492 BINDING SITE3, designated SEQ ID:7386, SEQ ID:8590 and SEQ ID:695 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30304] Another function of GAM189 is therefore inhibition of LOC339492 (Accession XP_290919.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339492.

[30305] LOC339577 (Accession XP_295005.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339577 BINDING SITE1 and LOC339577 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339577, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339577 BINDING SITE1 and LOC339577 BINDING SITE2, designated SEQ ID:14733

and SEQ ID:12075 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30306] Another function of GAM189 is therefore inhibition of LOC339577 (Accession XP_295005.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339577.

[30307] LOC339600 (Accession XP_295014.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339600 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339600, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339600 BINDING SITE, designated SEQ ID:15295, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30308] Another function of GAM189 is therefore inhibition of LOC339600 (Accession XP_295014.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339600.

[30309] LOC339659 (Accession XP_290981.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339659 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339659, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339659 BINDING SITE, designated SEQ ID:17076, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30310] Another function of GAM189 is therefore inhibition of LOC339659 (Accession XP_290981.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339659.

[30311] LOC339685 (Accession XP_295032.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339685 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339685, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339685 BINDING SITE, designated SEQ ID:1982, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30312] Another function of GAM189 is therefore inhibition of LOC339685 (Accession XP_295032.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339685.

[30313] LOC339694 (Accession XP_295035.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339694 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339694, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339694 BINDING SITE, designated SEQ ID:15954, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30314] Another function of GAM189 is therefore inhibition of LOC339694 (Accession XP_295035.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339694.

[30315] LOC339711 (Accession XP_295038.1) is another GAM189

target gene, herein designated TARGET GENE. LOC339711 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339711, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339711 BINDING SITE, designated SEQ ID:11528, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30316] Another function of GAM189 is therefore inhibition of LOC339711 (Accession XP_295038.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339711.

[30317] LOC339720 (Accession XP_295041.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339720 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339720, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339720 BINDING SITE, designated SEQ ID:16942, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30318] Another function of GAM189 is therefore inhibition of LOC339720 (Accession XP_295041.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339720.

[30319] LOC339803 (Accession XP_295072.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339803 BINDING SITE, designated SEQ ID:13337, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30320] Another function of GAM189 is therefore inhibition of LOC339803 (Accession XP_295072.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339803.

[30321] LOC339808 (Accession XP_295071.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339808

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339808, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339808 BINDING SITE, designated SEQ ID:6146, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30322] Another function of GAM189 is therefore inhibition of LOC339808 (Accession XP_295071.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339808.

[30323] LOC339809 (Accession XP_291020.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339809 BINDING SITE1 and LOC339809 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339809, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339809 BINDING SITE1 and LOC339809 BINDING SITE2, designated SEQ ID:1744 and SEQ ID:17750 respectively, to the nucleotide se-

quence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30324] Another function of GAM189 is therefore inhibition of LOC339809 (Accession XP_291020.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339809.

[30325] LOC339833 (Accession XP_291031.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339833 BINDING SITE1 and LOC339833 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339833, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339833 BINDING SITE1 and LOC339833 BINDING SITE2, designated SEQ ID:7633 and SEQ ID:10421 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30326] Another function of GAM189 is therefore inhibition of LOC339833 (Accession XP_291031.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC339833.

[30327] LOC339834 (Accession XP_291033.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339834 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC339834, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339834 BINDING SITE, designated SEQ ID:14645, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30328] Another function of GAM189 is therefore inhibition of LOC339834 (Accession XP_291033.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339834.

[30329] LOC339834 (Accession NP_835467.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339834 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC339834, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339834 BINDING SITE, designated SEQ ID:14645, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30330] Another function of GAM189 is therefore inhibition of LOC339834 (Accession NP_835467.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339834.

[30331] LOC339872 (Accession XP_291050.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339872 BINDING SITE1 through LOC339872 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC339872, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339872 BINDING SITE1 through LOC339872 BINDING SITE3, designated SEQ ID:5858, SEQ ID:9299 and SEQ ID:4026 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30332] Another function of GAM189 is therefore inhibition of

LOC339872 (Accession XP_291050.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339872.

[30333] LOC339894 (Accession XP_295095.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339894 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339894 BINDING SITE, designated SEQ ID:1081, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30334] Another function of GAM189 is therefore inhibition of LOC339894 (Accession XP_295095.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339894.

[30335] LOC339907 (Accession XP_291065.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339907 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339907, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339907 BINDING SITE, designated SEQ ID:3425, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30336] Another function of GAM189 is therefore inhibition of LOC339907 (Accession XP_291065.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339907.

[30337] LOC339909 (Accession XP_291069.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339909 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339909 BINDING SITE, designated SEQ ID:10709, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30338] Another function of GAM189 is therefore inhibition of LOC339909 (Accession XP_291069.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339909.

[30339] LOC339914 (Accession XP_295099.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339914 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339914, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339914 BINDING SITE, designated SEQ ID:714, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30340] Another function of GAM189 is therefore inhibition of LOC339914 (Accession XP_295099.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339914.

[30341] LOC339970 (Accession XP_291095.1) is another GAM189 target gene, herein designated TARGET GENE. LOC339970 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339970, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339970 BINDING SITE, designated SEQ ID:16942, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30342] Another function of GAM189 is therefore inhibition of LOC339970 (Accession XP_291095.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339970.

[30343] LOC340037 (Accession XP_295137.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340037 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340037, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340037 BINDING SITE, designated SEQ ID:12244, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30344] Another function of GAM189 is therefore inhibition of LOC340037 (Accession XP_295137.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC340037.

[30345] LOC340125 (Accession XP_291150.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340125 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340125 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30346] Another function of GAM189 is therefore inhibition of LOC340125 (Accession XP_291150.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340125.

[30347] LOC340138 (Accession XP_291153.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340138 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC340138 BINDING SITE, designated SEQ ID:11753, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30348] Another function of GAM189 is therefore inhibition of LOC340138 (Accession XP_291153.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340138.

[30349] LOC340156 (Accession XP_291158.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340156 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340156, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340156 BINDING SITE, designated SEQ ID:10096, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30350] Another function of GAM189 is therefore inhibition of LOC340156 (Accession XP_291158.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340156.

[30351] LOC340227 (Accession XP_291203.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340227 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340227, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340227 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30352] Another function of GAM189 is therefore inhibition of LOC340227 (Accession XP_291203.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340227.

[30353] LOC340238 (Accession XP_295188.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340238 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340238, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC340238 BINDING SITE, designated SEQ ID:2179, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30354] Another function of GAM189 is therefore inhibition of LOC340238 (Accession XP_295188.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340238.

[30355] LOC340259 (Accession XP_295190.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340259 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340259 BINDING SITE, designated SEQ ID:18147, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30356] Another function of GAM189 is therefore inhibition of LOC340259 (Accession XP_295190.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340259.

[30357] LOC340290 (Accession XP_291214.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340290 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340290, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340290 BINDING SITE, designated SEQ ID:15740, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30358] Another function of GAM189 is therefore inhibition of LOC340290 (Accession XP_291214.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340290.

[30359] LOC340390 (Accession XP_291269.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340390 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340390, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340390 BINDING SITE, designated SEQ ID:18868, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30360] Another function of GAM189 is therefore inhibition of LOC340390 (Accession XP_291269.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340390.

[30361] LOC340408 (Accession XP_291274.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340408 BINDING SITE, designated SEQ ID:1309, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30362] Another function of GAM189 is therefore inhibition of LOC340408 (Accession XP_291274.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340408.

[30363] LOC340414 (Accession XP_295240.1) is another GAM189

target gene, herein designated TARGET GENE. LOC340414 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340414, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340414 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30364] Another function of GAM189 is therefore inhibition of LOC340414 (Accession XP_295240.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340414.

[30365] LOC340450 (Accession XP_295252.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340450 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340450, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340450 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30366] Another function of GAM189 is therefore inhibition of LOC340450 (Accession XP_295252.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340450.

[30367] LOC340528 (Accession XP_295268.1) is another GAM189 target gene, herein designated TARGET GENE. LOC340528 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340528, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340528 BINDING SITE, designated SEQ ID:13053, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30368] Another function of GAM189 is therefore inhibition of LOC340528 (Accession XP_295268.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340528.

[30369] LOC342926 (Accession XP_292790.2) is another GAM189 target gene, herein designated TARGET GENE. LOC342926

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC342926, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC342926 BINDING SITE, designated SEQ ID:13464, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30370] Another function of GAM189 is therefore inhibition of LOC342926 (Accession XP_292790.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC342926.

[30371] LOC343435 (Accession XP_295563.1) is another GAM189 target gene, herein designated TARGET GENE. LOC343435 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC343435, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC343435 BINDING SITE, designated SEQ ID:439, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30372] Another function of GAM189 is therefore inhibition of LOC343435 (Accession XP_295563.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC343435.

[30373] LOC345275 (Accession NP_835236.1) is another GAM189 target gene, herein designated TARGET GENE. LOC345275 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC345275, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345275 BINDING SITE, designated SEQ ID:523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30374] Another function of GAM189 is therefore inhibition of LOC345275 (Accession NP_835236.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345275.

[30375] LOC345878 (Accession XP_293993.2) is another GAM189 target gene, herein designated TARGET GENE. LOC345878

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC345878, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345878 BINDING SITE, designated SEQ ID:12611, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30376] Another function of GAM189 is therefore inhibition of LOC345878 (Accession XP_293993.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345878.

[30377] LOC346653 (Accession XP_294357.2) is another GAM189 target gene, herein designated TARGET GENE. LOC346653 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC346653, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346653 BINDING SITE, designated SEQ ID:17927, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30378] Another function of GAM189 is therefore inhibition of LOC346653 (Accession XP_294357.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346653.

[30379] LOC347648 (Accession XP_300226.1) is another GAM189 target gene, herein designated TARGET GENE. LOC347648 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC347648, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347648 BINDING SITE, designated SEQ ID:9837, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30380] Another function of GAM189 is therefore inhibition of LOC347648 (Accession XP_300226.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347648.

[30381] LOC347764 (Accession XP_300530.1) is another GAM189 target gene, herein designated TARGET GENE. LOC347764 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC347764, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347764 BINDING SITE, designated SEQ ID:11420, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30382] Another function of GAM189 is therefore inhibition of LOC347764 (Accession XP_300530.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347764.

[30383] LOC347905 (Accession XP_302624.1) is another GAM189 target gene, herein designated TARGET GENE. LOC347905 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347905, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347905 BINDING SITE, designated SEQ ID:9505, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30384] Another function of GAM189 is therefore inhibition of

LOC347905 (Accession XP_302624.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347905.

[30385] LOC347918 (Accession XP_300565.1) is another GAM189 target gene, herein designated TARGET GENE. LOC347918 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347918 BINDING SITE, designated SEQ ID:17689, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30386] Another function of GAM189 is therefore inhibition of LOC347918 (Accession XP_300565.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347918.

[30387] LOC348075 (Accession XP_302653.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348075 BINDING SITE1 and LOC348075 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by LOC348075, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348075 BINDING SITE1 and LOC348075 BINDING SITE2, designated SEQ ID:13716 and SEQ ID:14381 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30388] Another function of GAM189 is therefore inhibition of LOC348075 (Accession XP_302653.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348075.

[30389] LOC348094 (Accession XP_300615.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348094 BINDING SITE1 and LOC348094 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348094, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348094 BINDING SITE1 and LOC348094 BINDING SITE2, designated SEQ ID:13332 and SEQ ID:16473 respectively, to the nucleotide se-

quence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30390] Another function of GAM189 is therefore inhibition of LOC348094 (Accession XP_300615.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348094.

[30391] LOC348113 (Accession XP_300623.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348113 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30392] Another function of GAM189 is therefore inhibition of LOC348113 (Accession XP_300623.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348113.

[30393] LOC348115 (Accession XP_300626.1) is another GAM189

target gene, herein designated TARGET GENE. LOC348115 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348115, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348115 BINDING SITE, designated SEQ ID:13705, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30394] Another function of GAM189 is therefore inhibition of LOC348115 (Accession XP_300626.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348115.

[30395] LOC348137 (Accession XP_300635.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348137 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348137 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30396] Another function of GAM189 is therefore inhibition of LOC348137 (Accession XP_300635.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348137.

[30397] LOC348142 (Accession XP_300636.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348142 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30398] Another function of GAM189 is therefore inhibition of LOC348142 (Accession XP_300636.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348142.

[30399] LOC348235 (Accession XP_300670.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348235

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348235 BINDING SITE, designated SEQ ID:15852, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30400] Another function of GAM189 is therefore inhibition of LOC348235 (Accession XP_300670.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348235.

[30401] LOC348262 (Accession XP_300683.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348262 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348262 BINDING SITE, designated SEQ ID:7306, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30402] Another function of GAM189 is therefore inhibition of LOC348262 (Accession XP_300683.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348262.

[30403] LOC348314 (Accession XP_302716.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348314 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348314, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348314 BINDING SITE, designated SEQ ID:16669, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30404] Another function of GAM189 is therefore inhibition of LOC348314 (Accession XP_302716.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348314.

[30405] LOC348326 (Accession XP_300696.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348326 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC348326, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348326 BINDING SITE, designated SEQ ID:19778, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30406] Another function of GAM189 is therefore inhibition of LOC348326 (Accession XP_300696.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348326.

[30407] LOC348327 (Accession XP_030209.2) is another GAM189 target gene, herein designated TARGET GENE. LOC348327 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348327, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348327 BINDING SITE, designated SEQ ID:8820, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30408] Another function of GAM189 is therefore inhibition of

LOC348327 (Accession XP_030209.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348327.

[30409] LOC348393 (Accession XP_302741.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348393 BINDING SITE1 and LOC348393 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348393, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348393 BINDING SITE1 and LOC348393 BINDING SITE2, designated SEQ ID:872 and SEQ ID:11192 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30410] Another function of GAM189 is therefore inhibition of LOC348393 (Accession XP_302741.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348393.

[30411] LOC348396 (Accession XP_300729.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348396

BINDING SITE1 through LOC348396 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC348396, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348396 BINDING SITE1 through LOC348396 BINDING SITE3, designated SEQ ID:10270, SEQ ID:1569 and SEQ ID:9545 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30412] Another function of GAM189 is therefore inhibition of LOC348396 (Accession XP_300729.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348396.

[30413] LOC348402 (Accession XP_300730.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348402 BINDING SITE1 through LOC348402 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC348402, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348402

BINDING SITE1 through LOC348402 BINDING SITE3, designated SEQ ID:7386, SEQ ID:695 and SEQ ID:8590 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30414] Another function of GAM189 is therefore inhibition of LOC348402 (Accession XP_300730.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348402.

[30415] LOC348445 (Accession XP_300738.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348445 BINDING SITE, designated SEQ ID:19778, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30416] Another function of GAM189 is therefore inhibition of LOC348445 (Accession XP_300738.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348445.

[30417] LOC348455 (Accession XP_302760.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348455 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348455, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348455 BINDING SITE, designated SEQ ID:15049, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30418] Another function of GAM189 is therefore inhibition of LOC348455 (Accession XP_302760.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348455.

[30419] LOC348460 (Accession XP_300743.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348460 BINDING SITE1 and LOC348460 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348460, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC348460 BINDING SITE1 and LOC348460 BINDING SITE2, designated SEQ ID:13465 and SEQ ID:4143 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30420] Another function of GAM189 is therefore inhibition of LOC348460 (Accession XP_300743.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348460.

[30421] LOC348474 (Accession XP_209299.2) is another GAM189 target gene, herein designated TARGET GENE. LOC348474 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348474, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348474 BINDING SITE, designated SEQ ID:17206, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30422] Another function of GAM189 is therefore inhibition of LOC348474 (Accession XP_209299.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348474.

[30423] LOC348494 (Accession XP_302789.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348494 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348494, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348494 BINDING SITE, designated SEQ ID:6119, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30424] Another function of GAM189 is therefore inhibition of LOC348494 (Accession XP_302789.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348494.

[30425] LOC348503 (Accession XP_300762.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348503 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348503, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC348503 BINDING SITE, designated SEQ ID:19361, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30426] Another function of GAM189 is therefore inhibition of LOC348503 (Accession XP_300762.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348503.

[30427] LOC348508 (Accession XP_302806.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348508 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348508, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348508 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30428] Another function of GAM189 is therefore inhibition of LOC348508 (Accession XP_302806.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348508.

[30429] LOC348525 (Accession XP_300778.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348525 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348525, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348525 BINDING SITE, designated SEQ ID:5488, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30430] Another function of GAM189 is therefore inhibition of LOC348525 (Accession XP_300778.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348525.

[30431] LOC348532 (Accession XP_302818.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348532 BINDING SITE1 and LOC348532 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348532, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC348532 BINDING SITE1 and LOC348532 BINDING SITE2, designated SEQ ID:872 and SEQ ID:11192 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30432] Another function of GAM189 is therefore inhibition of LOC348532 (Accession XP_302818.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348532.

[30433] LOC348583 (Accession XP_302833.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348583 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348583, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348583 BINDING SITE, designated SEQ ID:8544, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30434] Another function of GAM189 is therefore inhibition of LOC348583 (Accession XP_302833.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348583.

[30435] LOC348594 (Accession XP_302834.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348594 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348594, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348594 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30436] Another function of GAM189 is therefore inhibition of LOC348594 (Accession XP_302834.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348594.

[30437] LOC348595 (Accession XP_302837.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348595 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348595, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC348595 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30438] Another function of GAM189 is therefore inhibition of LOC348595 (Accession XP_302837.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348595.

[30439] LOC348603 (Accession XP_302844.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348603 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348603 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30440] Another function of GAM189 is therefore inhibition of LOC348603 (Accession XP_302844.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348603.

[30441] LOC348605 (Accession XP_300793.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348605 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348605, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348605 BINDING SITE, designated SEQ ID:16785, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30442] Another function of GAM189 is therefore inhibition of LOC348605 (Accession XP_300793.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348605.

[30443] LOC348702 (Accession XP_300808.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348702 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348702, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC348702 BINDING SITE, designated SEQ ID:7387, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30444] Another function of GAM189 is therefore inhibition of LOC348702 (Accession XP_300808.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348702.

[30445] LOC348790 (Accession XP_300843.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348790 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348790, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348790 BINDING SITE, designated SEQ ID:810, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30446] Another function of GAM189 is therefore inhibition of LOC348790 (Accession XP_300843.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348790.

[30447] LOC348797 (Accession XP_302888.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348797 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348797, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348797 BINDING SITE, designated SEQ ID:7741, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30448] Another function of GAM189 is therefore inhibition of LOC348797 (Accession XP_302888.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348797.

[30449] LOC348798 (Accession XP_300845.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348798 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348798, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348798 BINDING SITE, designated SEQ ID:19402, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30450] Another function of GAM189 is therefore inhibition of LOC348798 (Accession XP_300845.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348798.

[30451] LOC348825 (Accession XP_300853.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348825 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348825, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348825 BINDING SITE, designated SEQ ID:15126, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30452] Another function of GAM189 is therefore inhibition of LOC348825 (Accession XP_300853.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348825.

[30453] LOC348842 (Accession XP_300861.1) is another GAM189

target gene, herein designated TARGET GENE. LOC348842 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348842 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30454] Another function of GAM189 is therefore inhibition of LOC348842 (Accession XP_300861.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348842.

[30455] LOC348947 (Accession XP_302929.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348947 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348947, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348947 BINDING SITE, designated SEQ ID:8605, to the nucleotide sequence of GAM189 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:246.

[30456] Another function of GAM189 is therefore inhibition of LOC348947 (Accession XP_302929.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348947.

[30457] LOC348995 (Accession XP_300434.1) is another GAM189 target gene, herein designated TARGET GENE. LOC348995 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348995, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348995 BINDING SITE, designated SEQ ID:1900, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30458] Another function of GAM189 is therefore inhibition of LOC348995 (Accession XP_300434.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348995.

[30459] LOC349024 (Accession XP_300250.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349024

BINDING SITE1 and LOC349024 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC349024, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349024 BINDING SITE1 and LOC349024 BINDING SITE2, designated SEQ ID:1746 and SEQ ID:4617 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30460] Another function of GAM189 is therefore inhibition of LOC349024 (Accession XP_300250.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349024.

[30461] LOC349075 (Accession XP_300932.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349075 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349075, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349075 BINDING SITE, designated SEQ ID:16022, to

the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30462] Another function of GAM189 is therefore inhibition of LOC349075 (Accession XP_300932.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349075.

[30463] LOC349096 (Accession XP_300937.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349096 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349096, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349096 BINDING SITE, designated SEQ ID:6188, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30464] Another function of GAM189 is therefore inhibition of LOC349096 (Accession XP_300937.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349096.

[30465] LOC349114 (Accession XP_302960.1) is another GAM189

target gene, herein designated TARGET GENE. LOC349114 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349114 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30466] Another function of GAM189 is therefore inhibition of LOC349114 (Accession XP_302960.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349114.

[30467] LOC349170 (Accession XP_300969.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349170 BINDING SITE1 through LOC349170 BINDING SITE5 are target binding sites found in untranslated regions of mRNA encoded by LOC349170, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349170 BINDING SITE1 through LOC349170 BINDING SITE5, des-

ignated SEQ ID:9545, SEQ ID:11508, SEQ ID:18074, SEQ ID:3349 and SEQ ID:958 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30468] Another function of GAM189 is therefore inhibition of LOC349170 (Accession XP_300969.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349170.

[30469] LOC349251 (Accession XP_300251.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349251 BINDING SITE1 and LOC349251 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC349251, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349251 BINDING SITE1 and LOC349251 BINDING SITE2, designated SEQ ID:4454 and SEQ ID:2323 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30470] Another function of GAM189 is therefore inhibition of LOC349251 (Accession XP_300251.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349251.

[30471] LOC349360 (Accession XP_088528.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349360 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349360 BINDING SITE, designated SEQ ID:10639, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30472] Another function of GAM189 is therefore inhibition of LOC349360 (Accession XP_088528.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349360.

[30473] LOC349408 (Accession XP_303044.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349408, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349408 BINDING SITE, designated SEQ ID:13466, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30474] Another function of GAM189 is therefore inhibition of LOC349408 (Accession XP_303044.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349408.

[30475] LOC349440 (Accession XP_300513.1) is another GAM189 target gene, herein designated TARGET GENE. LOC349440 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349440 BINDING SITE, designated SEQ ID:4112, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30476] Another function of GAM189 is therefore inhibition of LOC349440 (Accession XP_300513.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC349440.

[30477] LOC350106 (Accession XP_303810.1) is another GAM189 target gene, herein designated TARGET GENE. LOC350106 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC350106, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350106 BINDING SITE, designated SEQ ID:18715, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30478] Another function of GAM189 is therefore inhibition of LOC350106 (Accession XP_303810.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350106.

[30479] LOC350914 (Accession XP_304556.1) is another GAM189 target gene, herein designated TARGET GENE. LOC350914 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC350914, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC350914 BINDING SITE, designated SEQ ID:19860, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30480] Another function of GAM189 is therefore inhibition of LOC350914 (Accession XP_304556.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350914.

[30481] LOC51058 (Accession NP_056995.1) is another GAM189 target gene, herein designated TARGET GENE. LOC51058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51058 BINDING SITE, designated SEQ ID:5678, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30482] Another function of GAM189 is therefore inhibition of LOC51058 (Accession NP_056995.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC51058.

[30483] LOC51193 (Accession NP_057415.1) is another GAM189 target gene, herein designated TARGET GENE. LOC51193 BINDING SITE1 and LOC51193 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC51193, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51193 BINDING SITE1 and LOC51193 BINDING SITE2, designated SEQ ID:3111 and SEQ ID:14721 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30484] Another function of GAM189 is therefore inhibition of LOC51193 (Accession NP_057415.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51193.

[30485] LOC51257 (Accession NP_057580.2) is another GAM189 target gene, herein designated TARGET GENE. LOC51257 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC51257, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51257 BINDING SITE, designated SEQ ID:14855, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30486] Another function of GAM189 is therefore inhibition of LOC51257 (Accession NP_057580.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51257.

[30487] LOC51334 (Accession NP_057728.1) is another GAM189 target gene, herein designated TARGET GENE. LOC51334 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC51334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51334 BINDING SITE, designated SEQ ID:8243, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30488] Another function of GAM189 is therefore inhibition of LOC51334 (Accession NP_057728.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC51334.

[30489] LOC51336 (Accession NP_057730.1) is another GAM189 target gene, herein designated TARGET GENE. LOC51336 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51336 BINDING SITE, designated SEQ ID:18703, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30490] Another function of GAM189 is therefore inhibition of LOC51336 (Accession NP_057730.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51336.

[30491] LOC55954 (Accession NP_061976.1) is another GAM189 target gene, herein designated TARGET GENE. LOC55954 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC55954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC55954 BINDING SITE, designated SEQ ID:17853, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30492] Another function of GAM189 is therefore inhibition of LOC55954 (Accession NP_061976.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC55954.

[30493] LOC56902 (Accession NP_064528.1) is another GAM189 target gene, herein designated TARGET GENE. LOC56902 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC56902, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC56902 BINDING SITE, designated SEQ ID:5945, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30494] Another function of GAM189 is therefore inhibition of LOC56902 (Accession NP_064528.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC56902.

[30495] LOC56926 (Accession NP_064555.1) is another GAM189 target gene, herein designated TARGET GENE. LOC56926 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC56926, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC56926 BINDING SITE, designated SEQ ID:8643, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30496] Another function of GAM189 is therefore inhibition of LOC56926 (Accession NP_064555.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC56926.

[30497] LOC57107 (Accession NP_065114.2) is another GAM189 target gene, herein designated TARGET GENE. LOC57107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC57107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC57107 BINDING SITE, designated SEQ ID:16916, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30498] Another function of GAM189 is therefore inhibition of LOC57107 (Accession NP_065114.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC57107.

[30499] LOC57146 (Accession NP_065155.2) is another GAM189 target gene, herein designated TARGET GENE. LOC57146 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC57146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC57146 BINDING SITE, designated SEQ ID:11036, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30500] Another function of GAM189 is therefore inhibition of LOC57146 (Accession NP_065155.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC57146.

[30501] LOC89894 (Accession NP_612350.1) is another GAM189 target gene, herein designated TARGET GENE. LOC89894 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC89894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC89894 BINDING SITE, designated SEQ ID:14184, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30502] Another function of GAM189 is therefore inhibition of LOC89894 (Accession NP_612350.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC89894.

[30503] LOC90408 (Accession XP_031517.1) is another GAM189 target gene, herein designated TARGET GENE. LOC90408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC90408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90408 BINDING SITE, designated SEQ ID:7704, to the

nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30504] Another function of GAM189 is therefore inhibition of LOC90408 (Accession XP_031517.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90408.

[30505] LOC90485 (Accession XP_032059.1) is another GAM189 target gene, herein designated TARGET GENE. LOC90485 BINDING SITE1 and LOC90485 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC90485, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90485 BINDING SITE1 and LOC90485 BINDING SITE2, designated SEQ ID:18698 and SEQ ID:6896 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30506] Another function of GAM189 is therefore inhibition of LOC90485 (Accession XP_032059.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC90485.

[30507] LOC90719 (Accession XP_033704.1) is another GAM189 target gene, herein designated TARGET GENE. LOC90719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90719 BINDING SITE, designated SEQ ID:13994, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30508] Another function of GAM189 is therefore inhibition of LOC90719 (Accession XP_033704.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90719.

[30509] LOC90999 (Accession XP_035410.1) is another GAM189 target gene, herein designated TARGET GENE. LOC90999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC90999 BINDING SITE, designated SEQ ID:15038, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30510] Another function of GAM189 is therefore inhibition of LOC90999 (Accession XP_035410.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90999.

[30511] LOC91115 (Accession XP_036218.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91115 BINDING SITE1 through LOC91115 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC91115, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91115 BINDING SITE1 through LOC91115 BINDING SITE3, designated SEQ ID:19989, SEQ ID:12591 and SEQ ID:17831 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30512] Another function of GAM189 is therefore inhibition of LOC91115 (Accession XP_036218.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC91115.

[30513] LOC91170 (Accession XP_036612.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91170 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91170 BINDING SITE, designated SEQ ID:16178, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30514] Another function of GAM189 is therefore inhibition of LOC91170 (Accession XP_036612.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91170.

[30515] LOC91250 (Accession XP_037135.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91250 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91250, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC91250 BINDING SITE, designated SEQ ID:8577, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30516] Another function of GAM189 is therefore inhibition of LOC91250 (Accession XP_037135.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91250.

[30517] LOC91266 (Accession XP_037268.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91266 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91266 BINDING SITE, designated SEQ ID:18355, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30518] Another function of GAM189 is therefore inhibition of LOC91266 (Accession XP_037268.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC91266.

[30519] LOC91373 (Accession XP_038063.5) is another GAM189 target gene, herein designated TARGET GENE. LOC91373 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91373, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91373 BINDING SITE, designated SEQ ID:9077, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30520] Another function of GAM189 is therefore inhibition of LOC91373 (Accession XP_038063.5) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91373.

[30521] LOC91549 (Accession XP_039115.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91549 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91549, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC91549 BINDING SITE, designated SEQ ID:17238, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30522] Another function of GAM189 is therefore inhibition of LOC91549 (Accession XP_039115.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91549.

[30523] LOC91661 (Accession NP_612381.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91661 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91661, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91661 BINDING SITE, designated SEQ ID:8303, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30524] Another function of GAM189 is therefore inhibition of LOC91661 (Accession NP_612381.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91661.

[30525] LOC91663 (Accession NP_612382.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91663 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91663 BINDING SITE, designated SEQ ID:8075, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30526] Another function of GAM189 is therefore inhibition of LOC91663 (Accession NP_612382.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91663.

[30527] LOC91893 (Accession XP_041340.1) is another GAM189 target gene, herein designated TARGET GENE. LOC91893 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91893, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91893 BINDING SITE, designated SEQ ID:14589, to the

nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30528] Another function of GAM189 is therefore inhibition of LOC91893 (Accession XP_041340.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91893.

[30529] LOC92148 (Accession XP_043160.1) is another GAM189 target gene, herein designated TARGET GENE. LOC92148 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC92148, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92148 BINDING SITE, designated SEQ ID:4097, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30530] Another function of GAM189 is therefore inhibition of LOC92148 (Accession XP_043160.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92148.

[30531] LOC92597 (Accession NP_775739.1) is another GAM189

target gene, herein designated TARGET GENE. LOC92597 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92597 BINDING SITE, designated SEQ ID:19339, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30532] Another function of GAM189 is therefore inhibition of LOC92597 (Accession NP_775739.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92597.

[30533] LOC93132 (Accession XP_049396.1) is another GAM189 target gene, herein designated TARGET GENE. LOC93132 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC93132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93132 BINDING SITE, designated SEQ ID:9953, to the nucleotide sequence of GAM189 RNA, herein designated

GAM RNA, also designated SEQ ID:246.

[30534] Another function of GAM189 is therefore inhibition of LOC93132 (Accession XP_049396.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93132.

[30535] Lanosterol synthase (2,3-oxidosqualene-lanosterol cyclase) (LSS, Accession NP_002331.2) is another GAM189 target gene, herein designated TARGET GENE. LSS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LSS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LSS BINDING SITE, designated SEQ ID:6091, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30536] Another function of GAM189 is therefore inhibition of Lanosterol synthase (2,3-oxidosqualene-lanosterol cyclase) (LSS, Accession NP_002331.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LSS.

[30537] Leukotriene b4 receptor (LTB4R, Accession NP_000743.1)

is another GAM189 target gene, herein designated TARGET GENE. LTB4R BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LTB4R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LTB4R BINDING SITE, designated SEQ ID:1022, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30538] Another function of GAM189 is therefore inhibition of Leukotriene b4 receptor (LTB4R, Accession NP_000743.1), a gene which may be the cardiac p2y receptor involved in the regulation of cardiac muscle contraction through modulation of l- type calcium currents. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LTB4R.

[30539] The function of LTB4R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Leukotriene b4 receptor 2 (LTB4R2, Accession NP_062813.1) is another GAM189 target gene, herein designated TARGET GENE. LTB4R2 BINDING SITE is a tar-

get binding site found in the 5` untranslated region of mRNA encoded by LTB4R2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LTB4R2 BINDING SITE, designated SEQ ID:15504, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30540] Another function of GAM189 is therefore inhibition of Leukotriene b4 receptor 2 (LTB4R2, Accession NP_062813.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LTB4R2.

[30541] Lymphocyte antigen 75 (LY75, Accession NP_002340.1) is another GAM189 target gene, herein designated TARGET GENE. LY75 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LY75, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LY75 BINDING SITE, designated SEQ ID:17724, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30542] Another function of GAM189 is therefore inhibition of Lymphocyte antigen 75 (LY75, Accession NP_002340.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LY75.

[30543] Lysozyme (renal amyloidosis) (LYZ, Accession NP_000230.1) is another GAM189 target gene, herein designated TARGET GENE. LYZ BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LYZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYZ BINDING SITE, designated SEQ ID:7382, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30544] Another function of GAM189 is therefore inhibition of Lysozyme (renal amyloidosis) (LYZ, Accession NP_000230.1), a gene which a bacteriolytic enzyme. and therefore may be associated with Renal amyloidosis. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Renal amyloidosis, and of other diseases and clinical conditions associated with LYZ.

[30545] The function of LYZ has been established by previous

studies. Lysozyme (EC 3.2.1.17) catalyzes the hydrolysis of certain mucopolysaccharides of bacterial cell walls. Specifically, it catalyzes the hydrolysis of the bacterial cell wall beta(1- 4) glycosidic linkages between N- acetylmuramic acid and N- acetylglucosamine. It is found in spleen, lung, kidney, white blood cells, plasma, saliva, milk and tears. Alexander Fleming (1881- 1955), of penicillin fame, discovered and named lysozyme. In a communication to the Royal Society, Fleming (1922) wrote: '.I wish to draw attention to a substance present in the tissues and secretions of the body, which is capable of rapidly dissolving certain bacteria. As this substance has properties akin to those of ferments I have called it a Lysozyme.' Fleming and Allison (1922) demonstrated an unusually high concentration in cartilage, indeed the highest of any tissue. Its role in cartilage is unknown. It resembles lactalbumin (OMIM Ref. No. 149750) in structure. Human lysozyme has a molecular mass of 14,602 Da. Neufeld (1972) suggested that a genetic defect of lysozyme might underlie a skeletal dysplasia. Spitznagel et al. (1972) observed a patient with selective deficiency of a particular type of neutrophil granule which resulted in about 50% reduction in lysozyme levels. The patient

showed increased susceptibility to infectionPrieur et al. (1974) described inherited lysozyme deficiency in rabbits. No abnormality of cartilage or bone was noted (Greenwald et al., 1975). Older mutant rabbits showed increased susceptibility to infections, especially subcutaneous abscesses (Prieur, 1975). Camara et al. (1990) identified 2 isozymes of rabbit lysozyme and showed that their distribution was tissue specific. Leukocytic and gastrointestinal isozymes were clearly distinguished, and a possible lymphoepithelial isozyme that resembled the gastrointestinal isozyme electrophoretically and chromatographically but not kinetically was demonstrated. Mutant, lysozyme- deficient rabbits completely lacked a detectable leukocytic isozyme but had gastrointestinal and lymphoepithelial isozymes indistinguishable from those of normal rabbits. By electrophoretic methods, the mutant rabbits were shown to lack a protein band corresponding to that of the leukocytic isozyme in normal rabbits Canet et al. (1999) studied the unfolding and refolding properties of human lysozyme and 2 of its amyloidogenic variants, ile56 to thr and asp67 to his, by stopped- flow fluorescence and hydrogen exchange pulse labeling coupled with mass spectrometry. Their results suggested that the amyloidogenic

nature of the lysozyme variants arises from a decrease in the stability of the native fold relative to partially folded intermediates. The origin of this instability was different in the 2 variants, being caused in one case primarily by a reduction in the folding rate and in the other by an increase in the unfolding rate. In both cases, this resulted in a low population of soluble partially folded species that can aggregate in a slow and controlled manner to form amyloid fibrils

[30546]

[30547] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30548] Canet, D.; Sunde, M.; Last, A. M.; Miranker, A.; Spencer, A.; Robinson, C. V.; Dobson, C. M. : Mechanistic studies of the folding of human lysozyme and the origin of amyloidogenic behavior in its disease- related variants. Biochemistry 38: 6419- 6427, 1999. ; and

[30549] Camara, V. M.; Harding, J. W.; Prieur, D. J. : Inherited lysozyme deficiency in rabbits: the absence of a primary isozyme of lysozyme as the cause of the condition. Lab. Invest. 63: 544- 55.

[30550] Further studies establishing the function and utilities of

LYZ are found in John Hopkins OMIM database record ID 153450, and in cited publications listed in Table 5, which are hereby incorporated by reference.Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1) is another GAM189 target gene, herein designated TARGET GENE. LZTS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LZTS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LZTS1 BINDING SITE, designated SEQ ID:4518, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30551] Another function of GAM189 is therefore inhibition of Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1), a gene which is an essential component of the nucleoskeleton. potential role in crosslinking filaments or anchoring other molecules. it is essential for growth. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LZTS1.

[30552] The function of LZTS1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM130.1.MAC30 (Accession XP_031536.2) is another GAM189 target gene, herein designated TARGET GENE. MAC30 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAC30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAC30 BINDING SITE, designated SEQ ID:5069, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30553] Another function of GAM189 is therefore inhibition of MAC30 (Accession XP_031536.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAC30.

[30554] MAIL (Accession NP_113607.1) is another GAM189 target gene, herein designated TARGET GENE. MAIL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAIL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAIL BINDING SITE, designated SEQ ID:2338, to the nucleotide sequence

of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30555] Another function of GAM189 is therefore inhibition of MAIL (Accession NP_113607.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAIL.

[30556] Male germ cell-associated kinase (MAK, Accession NP_005897.1) is another GAM189 target gene, herein designated TARGET GENE. MAK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAK BINDING SITE, designated SEQ ID:1989, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30557] Another function of GAM189 is therefore inhibition of Male germ cell-associated kinase (MAK, Accession NP_005897.1), a gene which plays an important role in spermatogenesis. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAK.

[30558] The function of MAK and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.MAPA (Accession NP_660299.1) is another GAM189 target gene, herein designated TARGET GENE. MAPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPA BINDING SITE, designated SEQ ID:5231, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30559] Another function of GAM189 is therefore inhibition of MAPA (Accession NP_660299.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPA.

[30560] Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) is another GAM189 target gene, herein designated TARGET GENE. MAPK8IP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK8IP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK8IP3 BINDING SITE, designated SEQ ID:14298, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30561] Another function of GAM189 is therefore inhibition of Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPK8IP3.

[30562] MCLC (Accession NP_055942.1) is another GAM189 target gene, herein designated TARGET GENE. MCLC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MCLC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCLC BINDING SITE, designated SEQ ID:7270, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30563] Another function of GAM189 is therefore inhibition of MCLC (Accession NP_055942.1) . Accordingly, utilities of

GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MCLC.

[30564] Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006873.1) is another GAM189 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30565] Another function of GAM189 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006873.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas

and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[30566] The function of MDM2 has been established by previous studies. MDM2 acts as a major regulator of the tumor suppressor p53 (OMIM Ref. No. 191170) by targeting its destruction. Oliner et al. (1992) used MDM2 clones to localize the human gene to 12q13- q14 by analysis of human- hamster somatic cell hybrids. By fluorescence in situ hybridization onto simultaneously DAPI- banded metaphase chromosomes and interphase nuclei, Mitchell et al. (1995) mapped MDM2 to 12q14.3- q15 distal to CDK4 (OMIM Ref. No. 123829) and flanked by Genethon microsatellites D12S80 and D12S83. On both the physical and the genetic maps of chromosome 12, Bureau et al. (1995) mapped the IFG gene (OMIM Ref. No. 147570) close to the D12S335 and D12S313 microsatellites. They also physically mapped it close to the locus of the MDM2 oncogene on 12q15, a localization proximal to that arrived at earlier. They described the organization of the Ifg, Myf6 (OMIM Ref. No. 159991), Mdm1, and Mdm2 loci on mouse chromosome 10 in a region with homology of synteny to human 12q15. . Bueso- Ramos et al. (1993) found overexpression of the MDM2 oncogene in leukemias. In-

activation of tumor suppressor genes leads to deregulated cell proliferation and is a key factor in human tumorigenesis. Mutations in the p53 and retinoblastoma (OMIM Ref. No. 180200) genes are frequently associated with human cancers, and simultaneous inactivation of both RB and p53 is frequently observed in naturally occurring tumors. Additionally, 3 distinct DNA tumor virus groups (papovaviruses, adenoviruses, and human papillomaviruses) transform cells by targeting and inactivating certain functions of both the p53 and RB1 gene products. Xiao et al. (1995) showed that MDM2 interacts physically and functionally with the RB protein and can inhibit its growth regulatory capacity. They thus demonstrated that both RB and p53 can be subjected to negative regulation by the product of a single cellular protooncogene. Mdm2 acts as a major regulator of the tumor suppressor p53 by targeting its destruction. Ries et al. (2000) showed that the mdm2 gene is also regulated by the Ras- driven Raf/MEK/MAP kinase pathway, in a p53- independent manner. Mdm2 induced by activated Raf degrades p53 in the absence of the Mdm2 inhibitor p19(ARF) (OMIM Ref. No. 600160). This regulatory pathway accounts for the observation that cells transformed by oncogenic Ras are more

resistant to p53- dependent apoptosis following exposure to DNA damage. Activation of the Ras- induced Raf/MEK/MAP kinase may therefore play a key role in suppressing p53 during tumor development and treatment. In primary cells, Raf also activates the Mdm2 inhibitor p19(ARF). Levels of p53 are therefore determined by opposing effects of Raf- induced p19(ARF) and Mdm2. The MDM2 oncoprotein promotes cell survival and cell cycle progression by inhibiting the p53 tumor suppressor protein (OMIM Ref. No. 191170). To regulate p53, MDM2 must gain nuclear entry; Mayo and Donner (2001) identified the mechanism that induces this. Mitogen- induced activation of phosphatidylinositol 3- kinase (see OMIM Ref. No. PIK3CA; 171834) and its downstream target, the AKT/PKB serine- threonine kinase (OMIM Ref. No. 164730), results in phosphorylation of MDM2 on serine-166 and serine- 186. Phosphorylation on these sites is necessary for translocation of MDM2 from the cytoplasm into the nucleus. Pharmacologic blockade of PI3- kinase/AKT signaling or expression of dominant- negative PI3-kinase or AKT inhibits nuclear entry of MDM2, increases cellular levels of p53, and augments p53 transcriptional activity. Expression of constitutively active AKT promotes

nuclear entry of MDM2, diminishes cellular levels of p53, and decreases p53 transcriptional activity. Mutation of the AKT phosphorylation sites in MDM2 produces a mutant protein that is unable to enter the nucleus and increases p53 activity. The demonstration that PI3- kinase/AKT signaling affects MDM2 localization provided insight into how this pathway, which is inappropriately activated in many malignancies, affects the function of p53. Testa and Bellacosa (2001) reviewed the central role of AKT in tumorigenesis.

[30570] Bueso- Ramos, C. E.; Yang, Y.; deLeon, E.; McCown, P.; Stass, S. A.; Albitar, M. : The human MDM- 2 oncogene is overexpressed in leukemias. Blood 82: 2617- 2623, 1993.

[30571] Further studies establishing the function and utilities of

MDM2 are found in John Hopkins OMIM database record ID 164785, and in cited publications listed in Table 5, which are hereby incorporated by reference.Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006870.1) is another GAM189 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30572] Another function of GAM189 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006870.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas

and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[30573] The function of MDM2 has been established by previous studies. MDM2 acts as a major regulator of the tumor suppressor p53 (OMIM Ref. No. 191170) by targeting its destruction. Oliner et al. (1992) used MDM2 clones to localize the human gene to 12q13- q14 by analysis of human- hamster somatic cell hybrids. By fluorescence in situ hybridization onto simultaneously DAPI- banded metaphase chromosomes and interphase nuclei, Mitchell et al. (1995) mapped MDM2 to 12q14.3- q15 distal to CDK4 (OMIM Ref. No. 123829) and flanked by Genethon microsatellites D12S80 and D12S83. On both the physical and the genetic maps of chromosome 12, Bureau et al. (1995) mapped the IFG gene (OMIM Ref. No. 147570) close to the D12S335 and D12S313 microsatellites. They also physically mapped it close to the locus of the MDM2 oncogene on 12q15, a localization proximal to that arrived at earlier. They described the organization of the Ifg, Myf6 (OMIM Ref. No. 159991), Mdm1, and Mdm2 loci on mouse chromosome 10 in a region with homology of synteny to human 12q15. . Bueso- Ramos et al. (1993) found overexpression of the MDM2 oncogene in leukemias. In-

activation of tumor suppressor genes leads to deregulated cell proliferation and is a key factor in human tumorigenesis. Mutations in the p53 and retinoblastoma (OMIM Ref. No. 180200) genes are frequently associated with human cancers, and simultaneous inactivation of both RB and p53 is frequently observed in naturally occurring tumors. Additionally, 3 distinct DNA tumor virus groups (papovaviruses, adenoviruses, and human papillomaviruses) transform cells by targeting and inactivating certain functions of both the p53 and RB1 gene products. Xiao et al. (1995) showed that MDM2 interacts physically and functionally with the RB protein and can inhibit its growth regulatory capacity. They thus demonstrated that both RB and p53 can be subjected to negative regulation by the product of a single cellular protooncogene. Mdm2 acts as a major regulator of the tumor suppressor p53 by targeting its destruction. Ries et al. (2000) showed that the mdm2 gene is also regulated by the Ras- driven Raf/MEK/MAP kinase pathway, in a p53- independent manner. Mdm2 induced by activated Raf degrades p53 in the absence of the Mdm2 inhibitor p19(ARF) (OMIM Ref. No. 600160). This regulatory pathway accounts for the observation that cells transformed by oncogenic Ras are more

resistant to p53- dependent apoptosis following exposure to DNA damage. Activation of the Ras- induced Raf/MEK/MAP kinase may therefore play a key role in suppressing p53 during tumor development and treatment. In primary cells, Raf also activates the Mdm2 inhibitor p19(ARF). Levels of p53 are therefore determined by opposing effects of Raf- induced p19(ARF) and Mdm2. The MDM2 oncoprotein promotes cell survival and cell cycle progression by inhibiting the p53 tumor suppressor protein (OMIM Ref. No. 191170). To regulate p53, MDM2 must gain nuclear entry; Mayo and Donner (2001) identified the mechanism that induces this. Mitogen- induced activation of phosphatidylinositol 3- kinase (see OMIM Ref. No. PIK3CA; 171834) and its downstream target, the AKT/PKB serine- threonine kinase (OMIM Ref. No. 164730), results in phosphorylation of MDM2 on serine-166 and serine- 186. Phosphorylation on these sites is necessary for translocation of MDM2 from the cytoplasm into the nucleus. Pharmacologic blockade of PI3- kinase/AKT signaling or expression of dominant- negative PI3-kinase or AKT inhibits nuclear entry of MDM2, increases cellular levels of p53, and augments p53 transcriptional activity. Expression of constitutively active AKT promotes

nuclear entry of MDM2, diminishes cellular levels of p53, and decreases p53 transcriptional activity. Mutation of the AKT phosphorylation sites in MDM2 produces a mutant protein that is unable to enter the nucleus and increases p53 activity. The demonstration that PI3- kinase/AKT signaling affects MDM2 localization provided insight into how this pathway, which is inappropriately activated in many malignancies, affects the function of p53. Testa and Bellacosa (2001) reviewed the central role of AKT in tumorigenesis.

[30574]

[30575] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

They described the organization of the Ifg,

Myf6 (OMIM Ref. No. 159991), Mdm1, and Mdm2 loci on mouse chromosome 10 in a region with homology of synteny to human 12q15. . Bueso- Ramos et al. (1993) found overexpression of the MDM2 oncogene in leukemias. Inactivation of tumor suppressor genes leads to deregulated cell proliferation and is a key factor in human tumorigenesis. Mutations in the p53 and retinoblastoma (OMIM Ref. No. 180200) genes are frequently associated with human cancers, and simultaneous inactivation of both RB and p53 is frequently observed in naturally occurring tumors. Additionally, 3 distinct DNA tumor virus groups (papovaviruses, adenoviruses, and human papillomaviruses) transform cells by targeting and inactivating certain functions of both the p53 and RB1 gene products. Xiao et al. (1995) showed that MDM2 interacts physically and functionally with the RB protein and can inhibit its growth regulatory capacity. They thus demonstrated that both RB and p53 can be subjected to negative regulation by the product of a single cellular protooncogene. Mdm2 acts as a major regulator of the tumor suppressor p53 by targeting its destruction. Ries et al. (2000) showed that the mdm2 gene is also regulated by the Ras- driven Raf/MEK/MAP kinase pathway, in a p53- independent manner.

Mdm2 induced by activated Raf degrades p53 in the absence of the Mdm2 inhibitor p19(ARF) (OMIM Ref. No. 600160). This regulatory pathway accounts for the observation that cells transformed by oncogenic Ras are more resistant to p53- dependent apoptosis following exposure to DNA damage. Activation of the Ras- induced Raf/MEK/MAP kinase may therefore play a key role in suppressing p53 during tumor development and treatment. In primary cells, Raf also activates the Mdm2 inhibitor p19(ARF). Levels of p53 are therefore determined by opposing effects of Raf- induced p19(ARF) and Mdm2. The MDM2 oncoprotein promotes cell survival and cell cycle progression by inhibiting the p53 tumor suppressor protein (OMIM Ref. No. 191170). To regulate p53, MDM2 must gain nuclear entry; Mayo and Donner (2001) identified the mechanism that induces this. Mitogen- induced activation of phosphatidylinositol 3- kinase (see OMIM Ref. No. PIK3CA; 171834) and its downstream target, the AKT/PKB serine- threonine kinase (OMIM Ref. No. 164730), results in phosphorylation of MDM2 on serine-166 and serine- 186. Phosphorylation on these sites is necessary for translocation of MDM2 from the cytoplasm into the nucleus. Pharmacologic blockade of PI3- kinase/

AKT signaling or expression of dominant- negative PI3-kinase or AKT inhibits nuclear entry of MDM2, increases cellular levels of p53, and augments p53 transcriptional activity. Expression of constitutively active AKT promotes nuclear entry of MDM2, diminishes cellular levels of p53, and decreases p53 transcriptional activity. Mutation of the AKT phosphorylation sites in MDM2 produces a mutant protein that is unable to enter the nucleus and increases p53 activity. The demonstration that PI3- kinase/AKT signaling affects MDM2 localization provided insight into how this pathway, which is inappropriately activated in many malignancies, affects the function of p53. Testa and Bellacosa (2001) reviewed the central role of AKT in tumorigenesis.

[30595]

[30596] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30597] Ries, S.; Biederer, C.; Woods, D.; Shifman, O.; Shirasawa, S.; Sasazuki, T.; McMahon, M.; Oren, M.; McCormick, F. : Opposing effects of Ras on p53: transcriptional activation of mdm2 and induction of p19(ARF). Cell 103: 321- 330, 2000. ; and

[30598] Bueso- Ramos, C. E.; Yang, Y.; deLeon, E.; McCown, P.; Stass, S. A.; Albitar, M. : The human MDM- 2 oncogene is overexpressed in leukemias. Blood 82: 2617- 2623, 1993.

[30599] Further studies establishing the function and utilities of MDM2 are found in John Hopkins OMIM database record ID 164785, and in cited publications listed in Table 5, which are hereby incorporated by reference.Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006871.1) is another GAM189 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30600] Another function of GAM189 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006871.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may

be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[30601] The function of MDM2 has been established by previous studies. MDM2 acts as a major regulator of the tumor suppressor p53 (OMIM Ref. No. 191170) by targeting its destruction. Oliner et al. (1992) used MDM2 clones to localize the human gene to 12q13- q14 by analysis of human- hamster somatic cell hybrids. By fluorescence in situ hybridization onto simultaneously DAPI- banded metaphase chromosomes and interphase nuclei, Mitchell et al. (1995) mapped MDM2 to 12q14.3- q15 distal to CDK4 (OMIM Ref. No. 123829) and flanked by Genethon microsatellites D12S80 and D12S83. On both the physical and the genetic maps of chromosome 12, Bureau et al. (1995) mapped the IFG gene (OMIM Ref. No. 147570) close to the D12S335 and D12S313 microsatellites. They also physically mapped it close to the locus of the MDM2 oncogene on 12q15, a localization proximal to that arrived at earlier. They described the organization of the Ifg,

Myf6 (OMIM Ref. No. 159991), Mdm1, and Mdm2 loci on mouse chromosome 10 in a region with homology of synteny to human 12q15. . Bueso- Ramos et al. (1993) found overexpression of the MDM2 oncogene in leukemias. Inactivation of tumor suppressor genes leads to deregulated cell proliferation and is a key factor in human tumorigenesis. Mutations in the p53 and retinoblastoma (OMIM Ref. No. 180200) genes are frequently associated with human cancers, and simultaneous inactivation of both RB and p53 is frequently observed in naturally occurring tumors. Additionally, 3 distinct DNA tumor virus groups (papovaviruses, adenoviruses, and human papillomaviruses) transform cells by targeting and inactivating certain functions of both the p53 and RB1 gene products. Xiao et al. (1995) showed that MDM2 interacts physically and functionally with the RB protein and can inhibit its growth regulatory capacity. They thus demonstrated that both RB and p53 can be subjected to negative regulation by the product of a single cellular protooncogene. Mdm2 acts as a major regulator of the tumor suppressor p53 by targeting its destruction. Ries et al. (2000) showed that the mdm2 gene is also regulated by the Ras- driven Raf/MEK/MAP kinase pathway, in a p53- independent manner.

Mdm2 induced by activated Raf degrades p53 in the absence of the Mdm2 inhibitor p19(ARF) (OMIM Ref. No. 600160). This regulatory pathway accounts for the observation that cells transformed by oncogenic Ras are more resistant to p53- dependent apoptosis following exposure to DNA damage. Activation of the Ras- induced Raf/MEK/MAP kinase may therefore play a key role in suppressing p53 during tumor development and treatment. In primary cells, Raf also activates the Mdm2 inhibitor p19(ARF). Levels of p53 are therefore determined by opposing effects of Raf- induced p19(ARF) and Mdm2. The MDM2 oncoprotein promotes cell survival and cell cycle progression by inhibiting the p53 tumor suppressor protein (OMIM Ref. No. 191170). To regulate p53, MDM2 must gain nuclear entry; Mayo and Donner (2001) identified the mechanism that induces this. Mitogen- induced activation of phosphatidylinositol 3- kinase (see OMIM Ref. No. PIK3CA; 171834) and its downstream target, the AKT/PKB serine- threonine kinase (OMIM Ref. No. 164730), results in phosphorylation of MDM2 on serine-166 and serine- 186. Phosphorylation on these sites is necessary for translocation of MDM2 from the cytoplasm into the nucleus. Pharmacologic blockade of PI3- kinase/

AKT signaling or expression of dominant- negative PI3-kinase or AKT inhibits nuclear entry of MDM2, increases cellular levels of p53, and augments p53 transcriptional activity. Expression of constitutively active AKT promotes nuclear entry of MDM2, diminishes cellular levels of p53, and decreases p53 transcriptional activity. Mutation of the AKT phosphorylation sites in MDM2 produces a mutant protein that is unable to enter the nucleus and increases p53 activity. The demonstration that PI3- kinase/AKT signaling affects MDM2 localization provided insight into how this pathway, which is inappropriately activated in many malignancies, affects the function of p53. Testa and Bellacosa (2001) reviewed the central role of AKT in tumorigenesis.

[30605] Bueso- Ramos, C. E.; Yang, Y.; deLeon, E.; McCown, P.; Stass, S. A.; Albitar, M. : The human MDM- 2 oncogene is overexpressed in leukemias. Blood 82: 2617- 2623, 1993.

[30606] Further studies establishing the function and utilities of MDM2 are found in John Hopkins OMIM database record ID 164785, and in cited publications listed in Table 5, which are hereby incorporated by reference.Mdm4, transformed 3t3 cell double minute 4, p53 binding protein (mouse) (MDM4, Accession NP_002384.1) is another GAM189 target gene, herein designated TARGET GENE. MDM4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MDM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM4 BINDING SITE, designated SEQ ID:7078, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30607] Another function of GAM189 is therefore inhibition of Mdm4, transformed 3t3 cell double minute 4, p53 binding protein (mouse) (MDM4, Accession NP_002384.1), a gene which Strongly similar to murine Mdm4; may interact with p53. Accordingly, utilities of GAM189 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with MDM4.

[30608] The function of MDM4 has been established by previous studies. Shvarts et al. (1997) isolated cDNAs encoding MDM4 by screening a human cDNA library from a colonic tumorigenic cell line with a mouse mdmx probe. The human MDM4 gene encodes a 490- amino acid protein containing a RING finger domain and a putative nuclear localization signal. The predicted mass of the protein was 54 kD, while the observed mass was 80 kD, a difference which Shvarts et al. (1997) stated was probably due to phosphorylation or other posttranslational modification. Northern blot analysis revealed a 10- kb mRNA expressed at a high level in thymus and at lower levels in all other tissues tested. A 2.2- kb mRNA was detected in testis. MDM4 protein produced by in vitro translation interacts with p53 (OMIM Ref. No. 191170) via a binding domain located in the N- terminal region of the MDM4 protein. MDM4 shows significant structural similarity to p53-binding protein MDM2 (OMIM Ref. No. 164785), an E3 ubiquitin ligase. The interaction between MDM2 and p53 is critical for cell viability; loss of Mdm2 causes cell death in vitro and in vivo in a p53- dependent manner. MDM4

has some of the same properties as MDM2, but unlike MDM2, it does not cause nuclear export or degradation of p53. To study MDM4 function in vivo, Parant et al. (2001) deleted the Mdm4 gene in mice. Mdm4- null mice died at 7.5 to 8.5 days postcoitum due to loss of cell proliferation. When Parant et al. (2001) crossed in a p53- null allele, they found that loss of p53 completely rescued the Mdm4 - /- embryonic lethality. Thus, MDM2 and MDM4 are nonoverlapping critical regulators of p53 in vivo. These data defined a new pathway of p53 regulation and raised the possibility that increased MDM4 levels and the resulting inactivation of p53 contribute to the development of human tumors. By fluorescence in situ hybridization, Shvarts et al. (1997) mapped the MDM4 gene to human chromosome 1q32.

[30609]

[30610] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30611] Parant, J.; Chavez- Reyes, A.; Little, N. A.; Yan, W.; Reinke, V.; Jochemsen, A. G.; Lozano, G. : Rescue of embryonic lethality in Mdm4- null mice by loss of Trp53 suggests a nonoverlapping pathway with MDM2 to regulate p53. Na-

ture Genet. 29: 92- 95, 2001. ; and

[30613] Further studies establishing the function and utilities of MDM4 are found in John Hopkins OMIM database record ID 602704, and in cited publications listed in Table 5, which are hereby incorporated by reference.Mediterranean fever (MEFV, Accession NP_000234.1) is another GAM189 target gene, herein designated TARGET GENE. MEFV BINDING SITE1 and MEFV BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MEFV, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEFV BINDING SITE1 and MEFV BINDING SITE2, designated SEQ ID:19829 and SEQ ID:5443 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30614] Another function of GAM189 is therefore inhibition of Mediterranean fever (MEFV, Accession NP_000234.1) . Accordingly, utilities of GAM189 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with MEFV.

[30615] Mesoderm development candidate 2 (MESDC2, Accession XP_051854.1) is another GAM189 target gene, herein designated TARGET GENE. MESDC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MESDC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MESDC2 BINDING SITE, designated SEQ ID:6523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30616] Another function of GAM189 is therefore inhibition of Mesoderm development candidate 2 (MESDC2, Accession XP_051854.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MESDC2.

[30617] MFTC (Accession NP_110407.2) is another GAM189 target gene, herein designated TARGET GENE. MFTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MFTC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II

or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MFTC BINDING SITE, designated SEQ ID:16545, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30618] Another function of GAM189 is therefore inhibition of MFTC (Accession NP_110407.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MFTC.

[30619] Mannosyl (alpha-1,6-)-glycoprotein beta-1,2-n-acetylglucosaminyltransferase (MGAT2, Accession NP_079374.1) is another GAM189 target gene, herein designated TARGET GENE. MGAT2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MGAT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGAT2 BINDING SITE, designated SEQ ID:9699, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30620] Another function of GAM189 is therefore inhibition of Mannosyl (alpha-1,6-)-glycoprotein beta-

1,2-n-acetylglucosaminyltransferase (MGAT2, Accession NP_079374.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGAT2.

[30621] MGC10772 (Accession NP_085044.2) is another GAM189 target gene, herein designated TARGET GENE. MGC10772 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC10772, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10772 BINDING SITE, designated SEQ ID:5386, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30622] Another function of GAM189 is therefore inhibition of MGC10772 (Accession NP_085044.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10772.

[30623] MGC10818 (Accession NP_085045.2) is another GAM189 target gene, herein designated TARGET GENE. MGC10818 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10818, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10818 BINDING SITE, designated SEQ ID:2199, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30624] Another function of GAM189 is therefore inhibition of MGC10818 (Accession NP_085045.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10818.

[30625] MGC11102 (Accession NP_115701.2) is another GAM189 target gene, herein designated TARGET GENE. MGC11102 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC11102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC11102 BINDING SITE, designated SEQ ID:17609, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30626] Another function of GAM189 is therefore inhibition of MGC11102 (Accession NP_115701.2) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11102.

[30627] MGC12262 (Accession NP_116085.1) is another GAM189 target gene, herein designated TARGET GENE. MGC12262 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC12262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12262 BINDING SITE, designated SEQ ID:12220, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30628] Another function of GAM189 is therefore inhibition of MGC12262 (Accession NP_116085.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12262.

[30629] MGC12518 (Accession NP_291026.1) is another GAM189 target gene, herein designated TARGET GENE. MGC12518 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC12518, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12518 BINDING SITE, designated SEQ ID:18251, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30630] Another function of GAM189 is therefore inhibition of MGC12518 (Accession NP_291026.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12518.

[30631] MGC13017 (Accession NP_542387.1) is another GAM189 target gene, herein designated TARGET GENE. MGC13017 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13017, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13017 BINDING SITE, designated SEQ ID:11562, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30632] Another function of GAM189 is therefore inhibition of MGC13017 (Accession NP_542387.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC13017.

[30633] MGC13024 (Accession NP_689501.1) is another GAM189 target gene, herein designated TARGET GENE. MGC13024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13024 BINDING SITE, designated SEQ ID:13564, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30634] Another function of GAM189 is therefore inhibition of MGC13024 (Accession NP_689501.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13024.

[30635] MGC13138 (Accession NP_219363.1) is another GAM189 target gene, herein designated TARGET GENE. MGC13138 BINDING SITE1 and MGC13138 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC13138, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13138 BINDING SITE1 and MGC13138 BINDING SITE2, designated SEQ ID:6646 and SEQ ID:9543 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30636] Another function of GAM189 is therefore inhibition of MGC13138 (Accession NP_219363.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13138.

[30637] MGC13170 (Accession NP_116101.1) is another GAM189 target gene, herein designated TARGET GENE. MGC13170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13170 BINDING SITE, designated SEQ ID:20116, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30638] Another function of GAM189 is therefore inhibition of MGC13170 (Accession NP_116101.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13170.

[30639] MGC13204 (Accession NP_113653.1) is another GAM189 target gene, herein designated TARGET GENE. MGC13204 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13204, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13204 BINDING SITE, designated SEQ ID:9494, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30640] Another function of GAM189 is therefore inhibition of MGC13204 (Accession NP_113653.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13204.

[30641] MGC14289 (Accession NP_542391.1) is another GAM189 target gene, herein designated TARGET GENE. MGC14289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14289, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14289 BINDING SITE, designated SEQ ID:3677, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30642] Another function of GAM189 is therefore inhibition of MGC14289 (Accession NP_542391.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14289.

[30643] MGC14436 (Accession NP_116286.1) is another GAM189 target gene, herein designated TARGET GENE. MGC14436 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC14436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14436 BINDING SITE, designated SEQ ID:17347, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30644] Another function of GAM189 is therefore inhibition of MGC14436 (Accession NP_116286.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC14436.

[30645] MGC14836 (Accession NP_219480.1) is another GAM189 target gene, herein designated TARGET GENE. MGC14836 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14836 BINDING SITE, designated SEQ ID:15044, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30646] Another function of GAM189 is therefore inhibition of MGC14836 (Accession NP_219480.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14836.

[30647] MGC15419 (Accession NP_079011.2) is another GAM189 target gene, herein designated TARGET GENE. MGC15419 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC15419, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC15419 BINDING SITE, designated SEQ ID:15115, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30648] Another function of GAM189 is therefore inhibition of MGC15419 (Accession NP_079011.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15419.

[30649] MGC15606 (Accession NP_659474.1) is another GAM189 target gene, herein designated TARGET GENE. MGC15606 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC15606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15606 BINDING SITE, designated SEQ ID:10968, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30650] Another function of GAM189 is therefore inhibition of MGC15606 (Accession NP_659474.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC15606.

[30651] MGC15668 (Accession NP_116145.1) is another GAM189 target gene, herein designated TARGET GENE. MGC15668 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC15668, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15668 BINDING SITE, designated SEQ ID:3620, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30652] Another function of GAM189 is therefore inhibition of MGC15668 (Accession NP_116145.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15668.

[30653] MGC15873 (Accession NP_116309.1) is another GAM189 target gene, herein designated TARGET GENE. MGC15873 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC15873, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC15873 BINDING SITE, designated SEQ ID:2894, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30654] Another function of GAM189 is therefore inhibition of MGC15873 (Accession NP_116309.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15873.

[30655] MGC1842 (Accession XP_037797.2) is another GAM189 target gene, herein designated TARGET GENE. MGC1842 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC1842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC1842 BINDING SITE, designated SEQ ID:15046, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30656] Another function of GAM189 is therefore inhibition of MGC1842 (Accession XP_037797.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC1842.

[30657] MGC21675 (Accession NP_443093.1) is another GAM189 target gene, herein designated TARGET GENE. MGC21675 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC21675, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC21675 BINDING SITE, designated SEQ ID:16916, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30658] Another function of GAM189 is therefore inhibition of MGC21675 (Accession NP_443093.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC21675.

[30659] MGC21738 (Accession NP_659481.1) is another GAM189 target gene, herein designated TARGET GENE. MGC21738 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC21738, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC21738 BINDING SITE, designated SEQ ID:8134, to the

nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30660] Another function of GAM189 is therefore inhibition of MGC21738 (Accession NP_659481.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC21738.

[30661] MGC2306 (Accession NP_002041.2) is another GAM189 target gene, herein designated TARGET GENE. MGC2306 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2306, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2306 BINDING SITE, designated SEQ ID:7160, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30662] Another function of GAM189 is therefore inhibition of MGC2306 (Accession NP_002041.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2306.

[30663] MGC2474 (Accession NP_076420.1) is another GAM189

target gene, herein designated TARGET GENE. MGC2474 BINDING SITE1 and MGC2474 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC2474, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2474 BINDING SITE1 and MGC2474 BINDING SITE2, designated SEQ ID:7797 and SEQ ID:18665 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30664] Another function of GAM189 is therefore inhibition of MGC2474 (Accession NP_076420.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2474.

[30665] MGC2477 (Accession NP_077004.1) is another GAM189 target gene, herein designated TARGET GENE. MGC2477 BINDING SITE1 through MGC2477 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by MGC2477, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of MGC2477 BINDING SITE1 through MGC2477 BINDING SITE3, designated SEQ ID:8610, SEQ ID:19729 and SEQ ID:5609 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30666] Another function of GAM189 is therefore inhibition of MGC2477 (Accession NP_077004.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2477.

[30667] MGC2603 (Accession NP_076942.1) is another GAM189 target gene, herein designated TARGET GENE. MGC2603 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2603 BINDING SITE, designated SEQ ID:5845, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30668] Another function of GAM189 is therefore inhibition of MGC2603 (Accession NP_076942.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MGC2603.

[30669] MGC2718 (Accession NP_076972.2) is another GAM189 target gene, herein designated TARGET GENE. MGC2718 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2718, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2718 BINDING SITE, designated SEQ ID:3976, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30670] Another function of GAM189 is therefore inhibition of MGC2718 (Accession NP_076972.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2718.

[30671] MGC27345 (Accession XP_300964.1) is another GAM189 target gene, herein designated TARGET GENE. MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MGC27345, corresponding to target binding sites such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2, designated SEQ ID:19385 and SEQ ID:18352 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30672] Another function of GAM189 is therefore inhibition of MGC27345 (Accession XP_300964.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC27345.

[30673] MGC29891 (Accession NP_653219.1) is another GAM189 target gene, herein designated TARGET GENE. MGC29891 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC29891, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29891 BINDING SITE, designated SEQ ID:14858, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30674] Another function of GAM189 is therefore inhibition of MGC29891 (Accession NP_653219.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29891.

[30675] MGC29898 (Accession NP_659485.1) is another GAM189 target gene, herein designated TARGET GENE. MGC29898 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC29898, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29898 BINDING SITE, designated SEQ ID:16672, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30676] Another function of GAM189 is therefore inhibition of MGC29898 (Accession NP_659485.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29898.

[30677] MGC3113 (Accession NP_076940.1) is another GAM189 target gene, herein designated TARGET GENE. MGC3113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC3113, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3113 BINDING SITE, designated SEQ ID:10136, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30678] Another function of GAM189 is therefore inhibition of MGC3113 (Accession NP_076940.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3113.

[30679] MGC3207 (Accession NP_115661.1) is another GAM189 target gene, herein designated TARGET GENE. MGC3207 BINDING SITE1 and MGC3207 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC3207, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3207 BINDING SITE1 and MGC3207 BINDING SITE2, designated SEQ ID:5157 and SEQ ID:13812 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30680] Another function of GAM189 is therefore inhibition of

MGC3207 (Accession NP_115661.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3207.

[30681] MGC3329 (Accession NP_076991.2) is another GAM189 target gene, herein designated TARGET GENE. MGC3329 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC3329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3329 BINDING SITE, designated SEQ ID:4477, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30682] Another function of GAM189 is therefore inhibition of MGC3329 (Accession NP_076991.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3329.

[30683] MGC33637 (Accession NP_689809.1) is another GAM189 target gene, herein designated TARGET GENE. MGC33637 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC33637, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33637 BINDING SITE, designated SEQ ID:12069, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30684] Another function of GAM189 is therefore inhibition of MGC33637 (Accession NP_689809.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33637.

[30685] MGC33887 (Accession NP_659473.1) is another GAM189 target gene, herein designated TARGET GENE. MGC33887 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC33887, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33887 BINDING SITE, designated SEQ ID:8724, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30686] Another function of GAM189 is therefore inhibition of MGC33887 (Accession NP_659473.1) . Accordingly, utili-

ties of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33887.

[30687] MGC34034 (Accession NP_694956.1) is another GAM189 target gene, herein designated TARGET GENE. MGC34034 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC34034, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34034 BINDING SITE, designated SEQ ID:9529, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30688] Another function of GAM189 is therefore inhibition of MGC34034 (Accession NP_694956.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34034.

[30689] MGC34079 (Accession NP_689688.1) is another GAM189 target gene, herein designated TARGET GENE. MGC34079 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC34079, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34079 BINDING SITE, designated SEQ ID:19817, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30690] Another function of GAM189 is therefore inhibition of MGC34079 (Accession NP_689688.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34079.

[30691] MGC34132 (Accession XP_291029.1) is another GAM189 target gene, herein designated TARGET GENE. MGC34132 BINDING SITE1 and MGC34132 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC34132, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34132 BINDING SITE1 and MGC34132 BINDING SITE2, designated SEQ ID:9087 and SEQ ID:8232 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30692] Another function of GAM189 is therefore inhibition of

MGC34132 (Accession XP_291029.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34132.

[30693] MGC35136 (Accession NP_689640.1) is another GAM189 target gene, herein designated TARGET GENE. MGC35136 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC35136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35136 BINDING SITE, designated SEQ ID:8535, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30694] Another function of GAM189 is therefore inhibition of MGC35136 (Accession NP_689640.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35136.

[30695] MGC35440 (Accession NP_694952.1) is another GAM189 target gene, herein designated TARGET GENE. MGC35440 BINDING SITE1 and MGC35440 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by MGC35440, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35440 BINDING SITE1 and MGC35440 BINDING SITE2, designated SEQ ID:7378 and SEQ ID:6886 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30696] Another function of GAM189 is therefore inhibition of MGC35440 (Accession NP_694952.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35440.

[30697] MGC35468 (Accession NP_694976.1) is another GAM189 target gene, herein designated TARGET GENE. MGC35468 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC35468, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35468 BINDING SITE, designated SEQ ID:7484, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30698] Another function of GAM189 is therefore inhibition of MGC35468 (Accession NP_694976.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35468.

[30699] MGC35521 (Accession NP_659502.1) is another GAM189 target gene, herein designated TARGET GENE. MGC35521 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC35521, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35521 BINDING SITE, designated SEQ ID:18741, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30700] Another function of GAM189 is therefore inhibition of MGC35521 (Accession NP_659502.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35521.

[30701] MGC3771 (Accession NP_112232.1) is another GAM189 target gene, herein designated TARGET GENE. MGC3771 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by MGC3771, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3771 BINDING SITE, designated SEQ ID:3231, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30702] Another function of GAM189 is therefore inhibition of MGC3771 (Accession NP_112232.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3771.

[30703] MGC39320 (Accession NP_689642.2) is another GAM189 target gene, herein designated TARGET GENE. MGC39320 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC39320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39320 BINDING SITE, designated SEQ ID:13428, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30704] Another function of GAM189 is therefore inhibition of

MGC39320 (Accession NP_689642.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC39320.

[30705] MGC40157 (Accession NP_689563.1) is another GAM189 target gene, herein designated TARGET GENE. MGC40157 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC40157, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40157 BINDING SITE, designated SEQ ID:10743, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30706] Another function of GAM189 is therefore inhibition of MGC40157 (Accession NP_689563.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC40157.

[30707] MGC40168 (Accession NP_714920.1) is another GAM189 target gene, herein designated TARGET GENE. MGC40168 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC40168, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40168 BINDING SITE, designated SEQ ID:7220, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30708] Another function of GAM189 is therefore inhibition of MGC40168 (Accession NP_714920.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC40168.

[30709] MGC40579 (Accession NP_689989.1) is another GAM189 target gene, herein designated TARGET GENE. MGC40579 BINDING SITE1 and MGC40579 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC40579, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40579 BINDING SITE1 and MGC40579 BINDING SITE2, designated SEQ ID:19220 and SEQ ID:16218 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30710] Another function of GAM189 is therefore inhibition of MGC40579 (Accession NP_689989.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC40579.

[30711] MGC4248 (Accession NP_115709.2) is another GAM189 target gene, herein designated TARGET GENE. MGC4248 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC4248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4248 BINDING SITE, designated SEQ ID:3338, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30712] Another function of GAM189 is therefore inhibition of MGC4248 (Accession NP_115709.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4248.

[30713] MGC43122 (Accession NP_775784.1) is another GAM189 target gene, herein designated TARGET GENE. MGC43122 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC43122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC43122 BINDING SITE, designated SEQ ID:12783, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30714] Another function of GAM189 is therefore inhibition of MGC43122 (Accession NP_775784.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC43122.

[30715] MGC50337 (Accession NP_848604.1) is another GAM189 target gene, herein designated TARGET GENE. MGC50337 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC50337, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC50337 BINDING SITE, designated SEQ ID:2959, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30716] Another function of GAM189 is therefore inhibition of

MGC50337 (Accession NP_848604.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50337.

[30717] MGC50452 (Accession NP_775733.1) is another GAM189 target gene, herein designated TARGET GENE. MGC50452 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC50452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC50452 BINDING SITE, designated SEQ ID:16867, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30718] Another function of GAM189 is therefore inhibition of MGC50452 (Accession NP_775733.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50452.

[30719] MGC50559 (Accession NP_776163.1) is another GAM189 target gene, herein designated TARGET GENE. MGC50559 BINDING SITE1 and MGC50559 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by MGC50559, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC50559 BINDING SITE1 and MGC50559 BINDING SITE2, designated SEQ ID:11296 and SEQ ID:15151 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30720] Another function of GAM189 is therefore inhibition of MGC50559 (Accession NP_776163.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50559.

[30721] MGC9912 (Accession NP_542395.1) is another GAM189 target gene, herein designated TARGET GENE. MGC9912 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC9912, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC9912 BINDING SITE, designated SEQ ID:12221, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30722] Another function of GAM189 is therefore inhibition of MGC9912 (Accession NP_542395.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC9912.

[30723] MGRN1 (Accession XP_048119.4) is another GAM189 target gene, herein designated TARGET GENE. MGRN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGRN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGRN1 BINDING SITE, designated SEQ ID:16616, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30724] Another function of GAM189 is therefore inhibition of MGRN1 (Accession XP_048119.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGRN1.

[30725] Mhc class ii transactivator (MHC2TA, Accession NP_000237.1) is another GAM189 target gene, herein designated TARGET GENE. MHC2TA BINDING SITE1 through MHC2TA BINDING SITE3 are target binding sites

found in untranslated regions of mRNA encoded by MHC2TA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MHC2TA BINDING SITE1 through MHC2TA BINDING SITE3, designated SEQ ID:2053, SEQ ID:783 and SEQ ID:922 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30726] Another function of GAM189 is therefore inhibition of Mhc class ii transactivator (MHC2TA, Accession NP_000237.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MHC2TA.

[30727] MIRAB13 (Accession NP_203744.1) is another GAM189 target gene, herein designated TARGET GENE. MIRAB13 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MIRAB13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MIRAB13 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM189

RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30728] Another function of GAM189 is therefore inhibition of MIRAB13 (Accession NP_203744.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIRAB13.

[30729] MIRAB13 (Accession XP_039236.6) is another GAM189 target gene, herein designated TARGET GENE. MIRAB13 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MIRAB13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MIRAB13 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30730] Another function of GAM189 is therefore inhibition of MIRAB13 (Accession XP_039236.6) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIRAB13.

[30731] Makorin, ring finger protein, 4 (MKRN4, Accession NP_110384.1) is another GAM189 target gene, herein designated TARGET GENE. MKRN4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MKRN4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MKRN4 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30732] Another function of GAM189 is therefore inhibition of Makorin, ring finger protein, 4 (MKRN4, Accession NP_110384.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MKRN4.

[30733] Melan-a (MLANA, Accession NP_005502.1) is another GAM189 target gene, herein designated TARGET GENE. MLANA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MLANA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of MLANA BINDING SITE, designated SEQ ID:13029, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30734] Another function of GAM189 is therefore inhibition of Melan-a (MLANA, Accession NP_005502.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLANA.

[30735] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) is another GAM189 target gene, herein designated TARGET GENE. MLC1 BINDING SITE1 and MLC1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MLC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE1 and MLC1 BINDING SITE2, designated SEQ ID:14833 and SEQ ID:19859 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30736] Another function of GAM189 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical

cysts 1 (MLC1, Accession NP_055981.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[30737] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) is another GAM189 target gene, herein designated TARGET GENE. MLC1 BINDING SITE1 and MLC1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MLC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE1 and MLC1 BINDING SITE2, designated SEQ ID:19859 and SEQ ID:19859 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30738] Another function of GAM189 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[30739] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) is another GAM189 target gene, herein designated TARGET GENE. MLC1 BINDING SITE1 and MLC1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MLC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE1 and MLC1 BINDING SITE2, designated SEQ ID:19859 and SEQ ID:14833 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30740] Another function of GAM189 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[30741] Melanoma-derived leucine zipper, extra-nuclear factor (MLZE, Accession NP_113603.1) is another GAM189 target gene, herein designated TARGET GENE. MLZE BINDING SITE is a target binding site found in the 5` untranslated

region of mRNA encoded by MLZE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLZE BINDING SITE, designated SEQ ID:9728, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30742] Another function of GAM189 is therefore inhibition of Melanoma-derived leucine zipper, extra-nuclear factor (MLZE, Accession NP_113603.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLZE.

[30743] Matrix metalloproteinase-like 1 (MMPL1, Accession NP_004133.1) is another GAM189 target gene, herein designated TARGET GENE. MMPL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MMPL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMPL1 BINDING SITE, designated SEQ ID:4374, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30744] Another function of GAM189 is therefore inhibition of Ma-

trix metalloproteinase-like 1 (MMPL1, Accession NP_004133.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMPL1.

[30745] Modulator of apoptosis 1 (MOAP1, Accession NP_071434.2) is another GAM189 target gene, herein designated TARGET GENE. MOAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MOAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOAP1 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30746] Another function of GAM189 is therefore inhibition of Modulator of apoptosis 1 (MOAP1, Accession NP_071434.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOAP1.

[30747] moblak (Accession NP_570719.1) is another GAM189 target gene, herein designated TARGET GENE. moblak BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by moblak, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of moblak BINDING SITE, designated SEQ ID:19657, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30748] Another function of GAM189 is therefore inhibition of moblak (Accession NP_570719.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with moblak.

[30749] Molybdenum cofactor synthesis 3 (MOCS3, Accession NP_055299.1) is another GAM189 target gene, herein designated TARGET GENE. MOCS3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MOCS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOCS3 BINDING SITE, designated SEQ ID:12064, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30750] Another function of GAM189 is therefore inhibition of Molybdenum cofactor synthesis 3 (MOCS3, Accession

NP_055299.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOCS3.

[30751] Myeloproliferative leukemia virus oncogene (MPL, Accession NP_005364.1) is another GAM189 target gene, herein designated TARGET GENE. MPL BINDING SITE1 and MPL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MPL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPL BINDING SITE1 and MPL BINDING SITE2, designated SEQ ID:11185 and SEQ ID:16608 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30752] Another function of GAM189 is therefore inhibition of Myeloproliferative leukemia virus oncogene (MPL, Accession NP_005364.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPL.

[30753] Mitochondrial ribosomal protein l35 (MRPL35, Accession NP_057706.2) is another GAM189 target gene, herein designated TARGET GENE. MRPL35 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL35, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL35 BINDING SITE, designated SEQ ID:9545, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30754] Another function of GAM189 is therefore inhibition of Mitochondrial ribosomal protein l35 (MRPL35, Accession NP_057706.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL35.

[30755] Mitochondrial ribosomal protein l44 (MRPL44, Accession NP_075066.1) is another GAM189 target gene, herein designated TARGET GENE. MRPL44 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPL44, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL44 BINDING SITE, designated SEQ ID:14596, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA,

also designated SEQ ID:246.

[30756] Another function of GAM189 is therefore inhibition of Mitochondrial ribosomal protein l44 (MRPL44, Accession NP_075066.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL44.

[30757] Mitochondrial ribosomal protein l49 (MRPL49, Accession NP_004918.1) is another GAM189 target gene, herein designated TARGET GENE. MRPL49 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPL49, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL49 BINDING SITE, designated SEQ ID:5438, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30758] Another function of GAM189 is therefore inhibition of Mitochondrial ribosomal protein l49 (MRPL49, Accession NP_004918.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL49.

[30759] Mitochondrial ribosomal protein s27 (MRPS27, Accession

NP_055899.1) is another GAM189 target gene, herein designated TARGET GENE. MRPS27 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPS27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPS27 BINDING SITE, designated SEQ ID:4179, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30760] Another function of GAM189 is therefore inhibition of Mitochondrial ribosomal protein s27 (MRPS27, Accession NP_055899.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPS27.

[30761] MSTP028 (Accession NP_114160.1) is another GAM189 target gene, herein designated TARGET GENE. MSTP028 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MSTP028, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSTP028 BINDING SITE, designated SEQ ID:12951, to the

nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30762] Another function of GAM189 is therefore inhibition of MSTP028 (Accession NP_114160.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSTP028.

[30763] MTH2 (Accession NP_060753.1) is another GAM189 target gene, herein designated TARGET GENE. MTH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTH2 BINDING SITE, designated SEQ ID:15874, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30764] Another function of GAM189 is therefore inhibition of MTH2 (Accession NP_060753.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTH2.

[30765] V-myc myelocytomatosis viral oncogene homolog 2 (avian) (MYCL2, Accession NP_005368.1) is another

GAM189 target gene, herein designated TARGET GENE. MYCL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYCL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYCL2 BINDING SITE, designated SEQ ID:16868, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30766] Another function of GAM189 is therefore inhibition of V-myc myelocytomatosis viral oncogene homolog 2 (avian) (MYCL2, Accession NP_005368.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYCL2.

[30767] MYLC2PL (Accession NP_612412.1) is another GAM189 target gene, herein designated TARGET GENE. MYLC2PL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MYLC2PL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLC2PL BINDING SITE, designated SEQ ID:3580, to the nucleotide sequence of GAM189 RNA, herein designated

GAM RNA, also designated SEQ ID:246.

[30768] Another function of GAM189 is therefore inhibition of MYLC2PL (Accession NP_612412.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLC2PL.

[30769] Myosin 5c (MYO5C, Accession NP_061198.1) is another GAM189 target gene, herein designated TARGET GENE. MYO5C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYO5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO5C BINDING SITE, designated SEQ ID:4306, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30770] Another function of GAM189 is therefore inhibition of Myosin 5c (MYO5C, Accession NP_061198.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYO5C.

[30771] NACT (Accession NP_808218.1) is another GAM189 target gene, herein designated TARGET GENE. NACT BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NACT BINDING SITE, designated SEQ ID:19968, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30772] Another function of GAM189 is therefore inhibition of NACT (Accession NP_808218.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NACT.

[30773] Nanog (Accession NP_079141.1) is another GAM189 target gene, herein designated TARGET GENE. Nanog BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Nanog, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Nanog BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30774] Another function of GAM189 is therefore inhibition of

Nanog (Accession NP_079141.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Nanog.

[30775] NCAG1 (Accession NP_115536.1) is another GAM189 target gene, herein designated TARGET GENE. NCAG1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCAG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCAG1 BINDING SITE, designated SEQ ID:3766, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30776] Another function of GAM189 is therefore inhibition of NCAG1 (Accession NP_115536.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCAG1.

[30777] Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1) is another GAM189 target gene, herein designated TARGET GENE. NCOA6 BINDING SITE1 and NCOA6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCOA6, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6 BINDING SITE1 and NCOA6 BINDING SITE2, designated SEQ ID:19446 and SEQ ID:12826 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30778] Another function of GAM189 is therefore inhibition of Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1), a gene which activates gene transcription through ligand- dependent association with coactivators. and therefore may be associated with Breast cancer. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Breast cancer., and of other diseases and clinical conditions associated with NCOA6.

[30779] The function of NCOA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Nuclear receptor coactivator 6 interacting protein (NCOA6IP, Accession NP_079107.5) is another GAM189 target gene, herein designated TARGET GENE. NCOA6IP BINDING SITE1 and NCOA6IP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCOA6IP, corresponding to target

binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6IP BINDING SITE1 and NCOA6IP BINDING SITE2, designated SEQ ID:10534 and SEQ ID:8841 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30780] Another function of GAM189 is therefore inhibition of Nuclear receptor coactivator 6 interacting protein (NCOA6IP, Accession NP_079107.5) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCOA6IP.

[30781] NDP52 (Accession NP_005822.1) is another GAM189 target gene, herein designated TARGET GENE. NDP52 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDP52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDP52 BINDING SITE, designated SEQ ID:15337, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30782] Another function of GAM189 is therefore inhibition of

NDP52 (Accession NP_005822.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDP52.

[30783] Ndrg family member 3 (NDRG3, Accession NP_114402.1) is another GAM189 target gene, herein designated TARGET GENE. NDRG3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NDRG3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDRG3 BINDING SITE, designated SEQ ID:15102, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30784] Another function of GAM189 is therefore inhibition of Ndrg family member 3 (NDRG3, Accession NP_114402.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDRG3.

[30785] Nadh dehydrogenase (ubiquinone) 1, subcomplex unknown, 2, 14.5kda (NDUFC2, Accession NP_004540.1) is another GAM189 target gene, herein designated TARGET GENE. NDUFC2 BINDING SITE is a target binding site found

in the 3` untranslated region of mRNA encoded by NDUFC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDUFC2 BINDING SITE, designated SEQ ID:10192, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30786] Another function of GAM189 is therefore inhibition of Nadh dehydrogenase (ubiquinone) 1, subcomplex unknown, 2, 14.5kda (NDUFC2, Accession NP_004540.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDUFC2.

[30787] Sialidase 3 (membrane sialidase) (NEU3, Accession NP_006647.2) is another GAM189 target gene, herein designated TARGET GENE. NEU3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NEU3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEU3 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM189

RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30788] Another function of GAM189 is therefore inhibition of Sialidase 3 (membrane sialidase) (NEU3, Accession NP_006647.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEU3.

[30789] Neurofibromin 2 (bilateral acoustic neuroma) (NF2, Accession NP_057502.1) is another GAM189 target gene, herein designated TARGET GENE. NF2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by NF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NF2 BINDING SITE, designated SEQ ID:9169, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30790] Another function of GAM189 is therefore inhibition of Neurofibromin 2 (bilateral acoustic neuroma) (NF2, Accession NP_057502.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NF2.

[30791] Non-pou domain containing, octamer-binding (NONO, Accession NP_031389.2) is another GAM189 target gene, herein designated TARGET GENE. NONO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NONO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NONO BINDING SITE, designated SEQ ID:17960, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30792] Another function of GAM189 is therefore inhibition of Non-pou domain containing, octamer-binding (NONO, Accession NP_031389.2), a gene which is a nuclear protein which contains RNA recognition motifs. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NONO.

[30793] The function of NONO has been established by previous studies. Dong et al. (1993) purified and cloned the cDNA of HeLa cell p54nrb, a nuclear protein with 2 RNA recognition motifs and extensive homology to human splicing factor PSF and Drosophila NONA/BJ6. Brown et al. (1997)

examined the expression of 33 X- linked genes in 8 mouse/human somatic cell hybrids that contained either the human active (3 hybrids) or inactive (5 hybrids) X chromosome. They found that the p54nrb gene was expressed only in those hybrids with the active human X. Using a megabase scale from pter to qter devised by Nelson et al. (1995), they noted that the approximate physical position of the gene was 70 Mb from pter. Brown et al. (1997) placed it in almost exactly the same position as the CCG1 gene (TAF2A; 313650), which had been mapped to Xq13- q27, and approximately 2 Mb proximal to PHKA1 (OMIM Ref. No. 311870), which had been mapped to Xq13. Thus, Xq13 is the likely location. The AFX1 gene (OMIM Ref. No. 300033) and the NRB54 gene map to a yeast artificial chromosome (YAC) contig of Xq13.1 that harbors the X- linked dystonia- parkinsonism locus DYT3 (OMIM Ref. No. 314250). Peters et al. (1997) found that the AFX1 gene is composed of 3 exons with most of exon 3 being untranslated. The NRB54 gene is made up of 12 exons ranging in size from 40 to 1,227 bp. The start codon is in exon 3 and the stop codon in exon 12. Both genes are expressed in the brain, among other tissues. Peters et al. (1997) excluded both genes as candidates of

DYT3 by sequencing of the exons and the flanking intronic sequences in a patient and a control, and by Northern blot analysis.

[30794]

[30795] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30798] Further studies establishing the function and utilities of NONO are found in John Hopkins OMIM database record ID 300084, and in cited publications listed in Table 5, which are hereby incorporated by reference.NOSIP (Accession NP_057037.1) is another GAM189 target gene, herein designated TARGET GENE. NOSIP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NOSIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOSIP BINDING SITE, designated SEQ ID:7311, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30799] Another function of GAM189 is therefore inhibition of NOSIP (Accession NP_057037.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOSIP.

[30800] Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) is another GAM189 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:5189, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30801] Another function of GAM189 is therefore inhibition of Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) . Accordingly, utilities of GAM189 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[30802] Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) is another GAM189 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:5189, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30803] Another function of GAM189 is therefore inhibition of Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[30804] Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1) is another GAM189 target gene, herein designated TARGET GENE. NQO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NQO1, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NQO1 BINDING SITE, designated SEQ ID:14855, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30805] Another function of GAM189 is therefore inhibition of Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1), a gene which is cytochrome b5 reductase which reduces redox dyes and quinones. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NQO1.

[30806] The function of NQO1 has been established by previous studies. By study of man- mouse somatic cell hybrids, Grzeschik (1980) and Povey et al. (1980) identified a fourth diaphorase locus (DIA4) which segregates with chromosome 16. The regional assignment was 16q12-q22 (smallest region of overlap, SRO). Edwards et al. (1983) showed that the quantitative polymorphism of DIA4 can be attributed to the segregation of a 'low activity' allele. In 4 to 6% of persons there is a DIA4- absent phenotype. In a series of human/hamster hybrids, made

using a human parental cell heterozygous for both phosphoglycolate phosphatase (PGP; 172280) and DIA4, the low activity allele and the PGP(2) allele cosegregated except in 2 of 16 discordant hybrids. DIA4 is presumably the same as NAD(P)H:menadione oxidoreductase (NMOR1). Jaiswal et al. (1988) showed that tetrachlorodibenzo- p-dioxin (TCDD) treatment of a human hepatoblastoma cell produced a 5- fold induction of NMOR1 activity. They isolated several overlapping human NMOR1 cDNAs. Southern blot analysis of human genomic DNA suggested the presence of a single NMOR1 gene approximately 10 kb long. They identified 4 potential polyadenylation sites and found 3 mRNAs in human cells. The 3 mRNA species appeared to be differentially regulated following TCDD treatment. By means of Southern blot analysis of genomic DNA from human/rodent somatic cell hybrids, Jaiswal et al. (1988) demonstrated that the gene is located on chromosome 16, consistent with the assignment of DIA4 to that chromosome. By means of mouse/human somatic cell hybrids containing rearranged chromosome 16 together with multiple probes, Chen et al. (1991) assigned the NMOR1 locus to 16q22.1.

[30807] Animal model experiments lend further support to the

function of NQO1. Radjendirane et al. (1998) generated Nqo1- null mice by targeted disruption. Mice lacking NQO1 gene expression were indistinguishable from wild-type mice. However, Nqo1- null mice exhibited increased toxicity when administered menadione compared with wildtype mice. These results established a role for NQO1 in protection against quinone toxicity.

[30808] It is appreciated that the abovementioned animal model for NQO1 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[30809] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30810] Jaiswal, A. K.; McBride, O. W.; Adesnik, M.; Nebert, D. W. : Human dioxin- inducible cytosolic NAD(P)H:menadione oxidoreductase: cDNA sequence and localization of gene to chromosome 16. J. Biol. Chem. 263: 13572- 13578, 1988. ; and

[30811] Radjendirane, V.; Joseph, P.; Lee, Y.- H.; Kimura, S.; Klein-Szanto, A. J. P.; Gonzalez, F. J.; Jaiswal, A. K. : Disruption of the DT diaphorase (NQO1) gene in mice leads to increased me.

[30812] Further studies establishing the function and utilities of NQO1 are found in John Hopkins OMIM database record ID 125860, and in cited publications listed in Table 5, which are hereby incorporated by reference.Nuclear receptor subfamily 2, group e, member 1 (NR2E1, Accession NP_003260.1) is another GAM189 target gene, herein designated TARGET GENE. NR2E1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NR2E1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR2E1 BINDING SITE, designated SEQ ID:13178, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30813] Another function of GAM189 is therefore inhibition of Nuclear receptor subfamily 2, group e, member 1 (NR2E1, Accession NP_003260.1), a gene which may be required for brain development and be involved in the regulation of retinal development . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR2E1.

[30814] The function of NR2E1 has been established by previous

studies. The product of the Drosophila terminal/gap gene 'tailless' (tll) is expressed in the embryonic brain and is required for brain development in flies. The tll protein is a ligand- activated nuclear receptor- type transcription factor. In 2 discrete subregions of the DNA- binding domain (DBD) that modulate the mode of DNA binding, the tll protein contains changes that distinguish it from all other nuclear receptors. Yu et al. (1994) identified the chick and mouse Tlx genes, encoding the vertebrate tll homolog. The vertebrate Tlx proteins are highly conserved, and both avian and mammalian Tlx contain the distinct tll DBD sequences. In vitro DNA- binding assays demonstrated that Tlx and tll share a target gene specificity that is unique among the nuclear receptor superfamily. Ectopic expression of chick Tlx in fly embryos caused a repression of segmentation comparable to that elicited by tll. In situ hybridization to chick and mouse embryos revealed that Tlx is expressed in the head ectoderm in early embryos. At later stages, cells expressing Tlx are localized in the ventricular zone of the neuroepithelial layer, suggesting that Tlx is involved in transcriptional control in undifferentiated neuroepithelial cells in the anterior regions of the developing vertebrate brain. By searching for genes lo-

cated within the 6q21- q23 region of minimal deletion (RMD) associated with hematologic malignancies, Jackson et al. (1998) identified the human TLX homolog, also called NR2E1. The TLX gene contains 9 exons and spans 24 kb. By a combination of direct sequencing, exon trapping, and library screening, they isolated human TLX cDNAs. The predicted 386- amino acid human protein shares 97% and 99% identity with chick and mouse TLX, respectively. The highest degree of similarity between TLX and Drosophila tll is within the DBDs and the ligand-binding domains (LBDs) of the proteins. Northern blot analysis revealed that the approximately 3.9- kb TLX mRNA is expressed exclusively in brain.

[30815]

tionship between Drosophila gap gene tailless and a vertebrate nuclear receptor Tlx. Nature 370: 375- 379, 1994.

[30819] Further studies establishing the function and utilities of NR2E1 are found in John Hopkins OMIM database record ID 603849, and in cited publications listed in Table 5, which are hereby incorporated by reference.NRLN1 (Accession NP_660277.1) is another GAM189 target gene, herein designated TARGET GENE. NRLN1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NRLN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRLN1 BINDING SITE, designated SEQ ID:15825, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30820] Another function of GAM189 is therefore inhibition of NRLN1 (Accession NP_660277.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRLN1.

[30821] 5'-nucleotidase, cytosolic ii (NT5C2, Accession NP_036361.1) is another GAM189 target gene, herein designated TARGET GENE. NT5C2 BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by NT5C2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NT5C2 BINDING SITE, designated SEQ ID:4030, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30822] Another function of GAM189 is therefore inhibition of 5'-nucleotidase, cytosolic ii (NT5C2, Accession NP_036361.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NT5C2.

[30823] Nudix (nucleoside diphosphate linked moiety x)-type motif 4 (NUDT4, Accession NP_061967.2) is another GAM189 target gene, herein designated TARGET GENE. NUDT4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NUDT4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUDT4 BINDING SITE, designated SEQ ID:18879, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30824] Another function of GAM189 is therefore inhibition of Nudix (nucleoside diphosphate linked moiety x)-type motif 4 (NUDT4, Accession NP_061967.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUDT4.

[30825] Nuclear mitotic apparatus protein 1 (NUMA1, Accession NP_006176.1) is another GAM189 target gene, herein designated TARGET GENE. NUMA1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NUMA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUMA1 BINDING SITE, designated SEQ ID:14343, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30826] Another function of GAM189 is therefore inhibition of Nuclear mitotic apparatus protein 1 (NUMA1, Accession NP_006176.1), a gene which is nuclear mitotic apparatus protein. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUMA1.

[30827] The function of NUMA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM133.1.NUP43 (Accession NP_078923.2) is another GAM189 target gene, herein designated TARGET GENE. NUP43 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NUP43, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP43 BINDING SITE, designated SEQ ID:1900, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30828] Another function of GAM189 is therefore inhibition of NUP43 (Accession NP_078923.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP43.

[30829] Nucleoredoxin (NXN, Accession NP_071908.1) is another GAM189 target gene, herein designated TARGET GENE. NXN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NXN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of NXN BINDING SITE, designated SEQ ID:935, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30830] Another function of GAM189 is therefore inhibition of Nucleoredoxin (NXN, Accession NP_071908.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NXN.

[30831] Olfactory receptor, family 51, subfamily e, member 2 (OR51E2, Accession NP_110401.1) is another GAM189 target gene, herein designated TARGET GENE. OR51E2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OR51E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OR51E2 BINDING SITE, designated SEQ ID:4096, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30832] Another function of GAM189 is therefore inhibition of Olfactory receptor, family 51, subfamily e, member 2 (OR51E2, Accession NP_110401.1) . Accordingly, utilities

of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OR51E2.

[30833] Origin recognition complex, subunit 1-like (yeast) (ORC1L, Accession NP_004144.1) is another GAM189 target gene, herein designated TARGET GENE. ORC1L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ORC1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ORC1L BINDING SITE, designated SEQ ID:17969, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30834] Another function of GAM189 is therefore inhibition of Origin recognition complex, subunit 1-like (yeast) (ORC1L, Accession NP_004144.1), a gene which may be required for initiation of DNA replication. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ORC1L.

[30835] The function of ORC1L and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM136.1.Oxysterol binding protein-like 2 (OSBPL2, Accession NP_055650.1) is another GAM189 target gene, herein designated TARGET GENE. OSBPL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL2 BINDING SITE, designated SEQ ID:7553, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30836] Another function of GAM189 is therefore inhibition of Oxysterol binding protein-like 2 (OSBPL2, Accession NP_055650.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL2.

[30837] Oxysterol binding protein-like 2 (OSBPL2, Accession NP_653081.1) is another GAM189 target gene, herein designated TARGET GENE. OSBPL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates

the complementarity of the nucleotide sequences of OSBPL2 BINDING SITE, designated SEQ ID:7553, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30838] Another function of GAM189 is therefore inhibition of Oxysterol binding protein-like 2 (OSBPL2, Accession NP_653081.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL2.

[30839] Purinergic receptor p2x-like 1, orphan receptor (P2RXL1, Accession NP_005437.1) is another GAM189 target gene, herein designated TARGET GENE. P2RXL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P2RXL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RXL1 BINDING SITE, designated SEQ ID:4425, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30840] Another function of GAM189 is therefore inhibition of Purinergic receptor p2x-like 1, orphan receptor (P2RXL1, Accession NP_005437.1) . Accordingly, utilities of

GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RXL1.

[30841] Purinergic receptor p2y, g-protein coupled, 1 (P2RY1, Accession NP_002554.1) is another GAM189 target gene, herein designated TARGET GENE. P2RY1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P2RY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RY1 BINDING SITE, designated SEQ ID:8453, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30842] Another function of GAM189 is therefore inhibition of Purinergic receptor p2y, g-protein coupled, 1 (P2RY1, Accession NP_002554.1), a gene which plays an essential role in thrombotic states. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RY1.

[30843] The function of P2RY1 has been established by previous studies. P2 purinoceptors have been broadly classified as P2X receptors (e.g., 600843), which are ATP- gated channels; P2Z receptors, which mediate nonselective pores in

mast cells; and P2Y receptors, a family of G protein- coupled receptors. Based on the recommendation for nomenclature of P2 purinoceptors, the P2Y purinoceptors were numbered in the order of cloning. Ayyanathan et al. (1996) noted that P2Y1, P2Y2 (PR2Y2; 600041), and P2Y3 have been cloned from a variety of species. P2Y1 responds to both ADP and ATP. The P2Y2 receptor cDNA was cloned in the human and this receptor was known as P2U under previous nomenclature. Ayyanathan et al. (1996) cloned the human P2Y1 receptor (P2RY1) and its 2 alternately polyadenylated forms of mRNA. The P2Y1 purinoceptor was also cloned from a human placenta cDNA library by Leon et al. (1996). They found that the gene encodes a 372- amino acid polypeptide. Northern blot analysis revealed 2 transcripts of 4.6 and 7.5 kb which were expressed in many tissues. Using oligonucleotide primers specific for the human P2Y1 purinergic receptor, Ayyanathan et al. (1996) amplified a region from genomic DNA from a panel of mouse/human somatic cell hybrid cell lines and localized the P2Y1 gene to human chromosome 3. By sequence tagged site (STS) mapping utilizing the National Center for Biotechnology Information (NCBI) database, Somers et al. (1997) mapped the

P2RY1 gene between flanking markers D3S1279 and D3S1280 at a position 173 to 174 cM from the most telomeric markers on the short arm of chromosome 3.

[30844] Animal model experiments lend further support to the function of P2RY1. Leon et al. (1999) generated P2Y1-null mice to define the physiologic role of the P2Y1 receptor. These mice were viable with no apparent abnormalities affecting their development, survival, reproduction, or morphology of platelets, and the platelet count in these animals was identical to that of wildtype mice. However, platelets from P2Y1- deficient mice were unable to aggregate in response to usual concentrations of ADP and displayed impaired aggregation to other agonists, while high concentrations of ADP induced platelet aggregation without shape change. In addition, ADP- induced inhibition of adenylyl cyclase still occurred, demonstrating the existence of an ADP receptor distinct from P2Y1. P2Y1- null mice had no spontaneous bleeding tendency but were resistant to thromboembolism induced by intravenous injection of ADP or collagen and adrenaline. Hence, the P2Y1 receptor plays an essential role in thrombotic states and represents a potential target for antithrombotic drugs.

[30845] It is appreciated that the abovementioned animal model for P2RY1 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[30846] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30847] Ayyanathan, K.; Webbs, T. E.; Sandhu, A. K.; Athwal, R. S.; Barnard, E. A.; Kunapuli, S. P. : Cloning and chromosomal localization of the human P2Y1 purinoceptor. Biochem. Biophys. Res. Commun. 218: 783- 788, 1996. ; and

[30849] Further studies establishing the function and utilities of P2RY1 are found in John Hopkins OMIM database record ID 601167, and in cited publications listed in Table 5, which are hereby incorporated by reference.P450RAI-2 (Accession NP_063938.1) is another GAM189 target gene, herein designated TARGET GENE. P450RAI-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P450RAI-2, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P450RAI-2 BINDING SITE, designated SEQ ID:18160, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30850] Another function of GAM189 is therefore inhibition of P450RAI-2 (Accession NP_063938.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P450RAI-2.

[30851] Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1) is another GAM189 target gene, herein designated TARGET GENE. PAICS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PAICS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAICS BINDING SITE, designated SEQ ID:16852, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30852] Another function of GAM189 is therefore inhibition of Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1), a gene which is required for purine biosynthesis. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAICS.

[30853] The function of PAICS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Pas domain containing serine/threonine kinase (PASK, Accession NP_055963.1) is another GAM189 target gene, herein designated TARGET GENE. PASK BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PASK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PASK BINDING SITE, designated SEQ ID:2769, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30854] Another function of GAM189 is therefore inhibition of Pas domain containing serine/threonine kinase (PASK, Acces-

sion NP_055963.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PASK.

[30855] Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1) is another GAM189 target gene, herein designated TARGET GENE. PCDHA9 BINDING SITE1 and PCDHA9 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PCDHA9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA9 BINDING SITE1 and PCDHA9 BINDING SITE2, designated SEQ ID:16048 and SEQ ID:10427 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30856] Another function of GAM189 is therefore inhibition of Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1), a gene which is a calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA9.

[30857] The function of PCDHA9 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Protocadherin beta 11 (PCDHB11, Accession NP_061754.1) is another GAM189 target gene, herein designated TARGET GENE. PCDHB11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB11 BINDING SITE, designated SEQ ID:10723, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30858] Another function of GAM189 is therefore inhibition of Protocadherin beta 11 (PCDHB11, Accession NP_061754.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB11.

[30859] Protocadherin beta 16 (PCDHB16, Accession NP_066008.1) is another GAM189 target gene, herein designated TARGET GENE. PCDHB16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB16, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB16 BINDING SITE, designated SEQ ID:4617, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30860] Another function of GAM189 is therefore inhibition of Protocadherin beta 16 (PCDHB16, Accession NP_066008.1), a gene which is a potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB16.

[30861] The function of PCDHB16 has been established by previous studies. Cadherins are calcium- dependent cell- cell adhesion molecules that mediate neural cell- cell interactions. Protocadherins constitute a subfamily of nonclassic cadherins. PCDHB16 is a member of the beta cluster of protocadherin genes on 5q31. For specific information on the PCDHB genes, see 604967. Using PCR with degenerate primers to screen melanoma cell lines, Matsuyoshi et al. (1997) obtained a cDNA fragment encoding part of PCDHB16, which they termed ME1. RT- PCR analysis detected expression of ME1 in melanoma cell lines and nor-

mal fibroblast cell lines, but not in a squamous carcinoma cell lines or normal melanocytes, suggesting that ME1 may play a role in the strong cell- cell adhesiveness of melanoma cells.

[30862]

[30863] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30864] Matsuyoshi, N.; Tanaka, T.; Toda, K.; Imamura, S. : Identification of novel cadherins expressed in human melanoma cells. J. Invest. Derm. 108: 908- 913, 1997. ; and

[30865] Wu, Q.; Zhang, T.; Cheng, J.- F.; Kim, Y.; Grimwood, J.; Schmutz, J.; Dickson, M.; Noonan, J. P.; Zhang, M. Q.; Myers, R. M.; Maniatis, T. : Comparative DNA sequence analysis of mouse and.

[30866] Further studies establishing the function and utilities of PCDHB16 are found in John Hopkins OMIM database record ID 606345, and in cited publications listed in Table 5, which are hereby incorporated by reference.Protocadherin beta 9 (PCDHB9, Accession NP_061992.2) is another GAM189 target gene, herein designated TARGET GENE. PCDHB9 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by PCDHB9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB9 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30867] Another function of GAM189 is therefore inhibition of Protocadherin beta 9 (PCDHB9, Accession NP_061992.2), a gene which is a potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB9.

[30868] The function of PCDHB9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Phosphodiesterase 6b, cgmp-specific, rod, beta (congenital stationary night blindness 3, autosomal dominant) (PDE6B, Accession NP_000274.1) is another GAM189 target gene, herein designated TARGET GENE. PDE6B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDE6B, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDE6B BINDING SITE, designated SEQ ID:936, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30869] Another function of GAM189 is therefore inhibition of Phosphodiesterase 6b, cgmp-specific, rod, beta (congenital stationary night blindness 3, autosomal dominant) (PDE6B, Accession NP_000274.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE6B.

[30870] Platelet derived growth factor c (PDGFC, Accession NP_057289.1) is another GAM189 target gene, herein designated TARGET GENE. PDGFC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDGFC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDGFC BINDING SITE, designated SEQ ID:905, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30871] Another function of GAM189 is therefore inhibition of

Platelet derived growth factor c (PDGFC, Accession NP_057289.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDGFC.

[30872] Pdz and lim domain 2 (mystique) (PDLIM2, Accession NP_789847.1) is another GAM189 target gene, herein designated TARGET GENE. PDLIM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PDLIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDLIM2 BINDING SITE, designated SEQ ID:14973, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30873] Another function of GAM189 is therefore inhibition of Pdz and lim domain 2 (mystique) (PDLIM2, Accession NP_789847.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDLIM2.

[30874] Pdz domain containing 1 (PDZK1, Accession NP_002605.2) is another GAM189 target gene, herein designated TARGET GENE. PDZK1 BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by PDZK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDZK1 BINDING SITE, designated SEQ ID:4194, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30875] Another function of GAM189 is therefore inhibition of Pdz domain containing 1 (PDZK1, Accession NP_002605.2), a gene which is a contains PDZ interaction domains, interacts with MAP17, a protein involved in control of cell proliferation. and therefore may be associated with Autosomal dominant hypophosphatemic rickets. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Autosomal dominant hypophosphatemic rickets, and of other diseases and clinical conditions associated with PDZK1.

[30876] The function of PDZK1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.PDZRN1 (Accession NP_699202.1) is another GAM189 target gene, herein designated TARGET GENE. PDZRN1 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by PDZRN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDZRN1 BINDING SITE, designated SEQ ID:5270, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30877] Another function of GAM189 is therefore inhibition of PDZRN1 (Accession NP_699202.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZRN1.

[30878] Pellino homolog 1 (drosophila) (PELI1, Accession NP_065702.2) is another GAM189 target gene, herein designated TARGET GENE. PELI1 BINDING SITE1 through PELI1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PELI1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PELI1 BINDING SITE1 through PELI1 BINDING SITE3, designated SEQ ID:7382, SEQ ID:14861 and SEQ ID:5491 respectively, to the nucleotide sequence of GAM189 RNA,

herein designated GAM RNA, also designated SEQ ID:246.

[30879] Another function of GAM189 is therefore inhibition of Pellino homolog 1 (drosophila) (PELI1, Accession NP_065702.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PELI1.

[30880] Period homolog 2 (drosophila) (PER2, Accession NP_073728.1) is another GAM189 target gene, herein designated TARGET GENE. PER2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PER2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PER2 BINDING SITE, designated SEQ ID:19703, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30881] Another function of GAM189 is therefore inhibition of Period homolog 2 (drosophila) (PER2, Accession NP_073728.1), a gene which Period homolog 2; putative circadian clock protein; has a PAS dimerization domain and therefore may be associated with Familial advanced sleep- phase syndrome. Accordingly, utilities of GAM189

include diagnosis, prevention and treatment of Familial advanced sleep- phase syndrome, and of other diseases and clinical conditions associated with PER2.

[30882] The function of PER2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Phosphoribosylformylglycinamidine synthase (fgar amidotransferase) (PFAS, Accession NP_036525.1) is another GAM189 target gene, herein designated TARGET GENE. PFAS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PFAS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PFAS BINDING SITE, designated SEQ ID:16261, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30883] Another function of GAM189 is therefore inhibition of Phosphoribosylformylglycinamidine synthase (fgar amidotransferase) (PFAS, Accession NP_036525.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with PFAS.

[30884] PHAX (Accession NP_115553.1) is another GAM189 target gene, herein designated TARGET GENE. PHAX BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PHAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHAX BINDING SITE, designated SEQ ID:12159, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30885] Another function of GAM189 is therefore inhibition of PHAX (Accession NP_115553.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHAX.

[30886] Polymeric immunoglobulin receptor (PIGR, Accession NP_002635.2) is another GAM189 target gene, herein designated TARGET GENE. PIGR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIGR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGR BINDING SITE, designated

SEQ ID:11059, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30887] Another function of GAM189 is therefore inhibition of Polymeric immunoglobulin receptor (PIGR, Accession NP_002635.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGR.

[30888] Phosphoinositide-3-kinase, class 2, beta polypeptide (PIK3C2B, Accession NP_002637.2) is another GAM189 target gene, herein designated TARGET GENE. PIK3C2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIK3C2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIK3C2B BINDING SITE, designated SEQ ID:10488, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30889] Another function of GAM189 is therefore inhibition of Phosphoinositide-3-kinase, class 2, beta polypeptide (PIK3C2B, Accession NP_002637.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with PIK3C2B.

[30890] Phosphoinositide-3-kinase, class 3 (PIK3C3, Accession NP_002638.1) is another GAM189 target gene, herein designated TARGET GENE. PIK3C3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIK3C3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIK3C3 BINDING SITE, designated SEQ ID:8874, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30891] Another function of GAM189 is therefore inhibition of Phosphoinositide-3-kinase, class 3 (PIK3C3, Accession NP_002638.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3C3.

[30892] Phosphoinositide-3-kinase, catalytic, delta polypeptide (PIK3CD, Accession NP_005017.2) is another GAM189 target gene, herein designated TARGET GENE. PIK3CD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIK3CD, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIK3CD BINDING SITE, designated SEQ ID:9545, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30893] Another function of GAM189 is therefore inhibition of Phosphoinositide-3-kinase, catalytic, delta polypeptide (PIK3CD, Accession NP_005017.2), a gene which regulating cell growth. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3CD.

[30894] The function of PIK3CD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Pbx/knotted 1 homeobox 1 (PKNOX1, Accession NP_004562.2) is another GAM189 target gene, herein designated TARGET GENE. PKNOX1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PKNOX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKNOX1 BINDING SITE, designated SEQ ID:8826, to the nucleotide se-

quence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30895] Another function of GAM189 is therefore inhibition of Pbx/knotted 1 homeobox 1 (PKNOX1, Accession NP_004562.2), a gene which may regulate gene expression and control cell differentiation. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKNOX1.

[30896] The function of PKNOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Phospholipase a2, group vi (cytosolic, calcium-independent) (PLA2G6, Accession NP_003551.1) is another GAM189 target gene, herein designated TARGET GENE. PLA2G6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLA2G6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLA2G6 BINDING SITE, designated SEQ ID:16143, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ

ID:246.

[30897] Another function of GAM189 is therefore inhibition of Phospholipase a2, group vi (cytosolic, calcium-independent) (PLA2G6, Accession NP_003551.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLA2G6.

[30898] Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) is another GAM189 target gene, herein designated TARGET GENE. PMCHL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMCHL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL1 BINDING SITE, designated SEQ ID:16917, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30899] Another function of GAM189 is therefore inhibition of Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL1.

[30900] Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) is another GAM189 target gene, herein designated TARGET GENE. PMCHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMCHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL2 BINDING SITE, designated SEQ ID:16917, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30901] Another function of GAM189 is therefore inhibition of Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL2.

[30902] PMPCA (Accession NP_055975.1) is another GAM189 target gene, herein designated TARGET GENE. PMPCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMPCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMPCA

BINDING SITE, designated SEQ ID:7640, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30903] Another function of GAM189 is therefore inhibition of PMPCA (Accession NP_055975.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMPCA.

[30904] Paraneoplastic antigen ma2 (PNMA2, Accession NP_009188.1) is another GAM189 target gene, herein designated TARGET GENE. PNMA2 BINDING SITE1 and PNMA2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PNMA2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNMA2 BINDING SITE1 and PNMA2 BINDING SITE2, designated SEQ ID:17067 and SEQ ID:8006 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30905] Another function of GAM189 is therefore inhibition of Paraneoplastic antigen ma2 (PNMA2, Accession NP_009188.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with PNMA2.

[30906] Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) is another GAM189 target gene, herein designated TARGET GENE. POFUT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by POFUT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POFUT1 BINDING SITE, designated SEQ ID:11287, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30907] Another function of GAM189 is therefore inhibition of Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POFUT1.

[30908] Polymerase (dna directed), epsilon 3 (p17 subunit) (POLE3, Accession NP_059139.2) is another GAM189 target gene, herein designated TARGET GENE. POLE3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLE3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLE3 BINDING SITE, designated SEQ ID:6151, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30909] Another function of GAM189 is therefore inhibition of Polymerase (dna directed), epsilon 3 (p17 subunit) (POLE3, Accession NP_059139.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLE3.

[30910] Polymerase (rna) ii (dna directed) polypeptide d (POLR2D, Accession NP_004796.1) is another GAM189 target gene, herein designated TARGET GENE. POLR2D BINDING SITE1 and POLR2D BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by POLR2D, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLR2D BINDING SITE1 and POLR2D BINDING SITE2, designated SEQ ID:5412 and SEQ ID:2798 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30911] Another function of GAM189 is therefore inhibition of

Polymerase (rna) ii (dna directed) polypeptide d (POLR2D, Accession NP_004796.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLR2D.

[30912] Paraoxonase 1 (PON1, Accession NP_000437.3) is another GAM189 target gene, herein designated TARGET GENE. PON1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PON1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PON1 BINDING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30913] Another function of GAM189 is therefore inhibition of Paraoxonase 1 (PON1, Accession NP_000437.3), a gene which hydrolyzes the toxic metabolites of a variety of organophosphorus insecticides. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PON1.

[30914] The function of PON1 has been established by previous studies. Two factors result in large individual variations in PON serum levels: a substrate- dependent activity poly-

morphism and large individual differences in PON protein levels that are stable over time. Animal model studies indicated that PON activity levels are likely to play a major role in determining sensitivity to several organophosphate insecticides (Clendenning et al., 1996). The arg192 isoform (168820.0001) appears to be a risk factor in coronary artery disease. Serum paraoxonase is an esterase that is associated with high density lipoproteins (HDLs) in the plasma. It is involved in the detoxification of organophosphate insecticides such as parathion and chlorpyrifos. PON1 may also confer protection against coronary artery disease by destroying proinflammatory oxidized lipids present in oxidized low density lipoproteins (LDLs). To study the role of PON1 in vivo, Shih et al. (1998) created PON1- knockout mice by gene targeting. Compared with their wildtype littermates, PON1- deficient mice were extremely sensitive to the toxic effects of chlorpyrifos oxon, the activated form of chlorpyrifos, and were more sensitive to chlorpyrifos itself. HDLs isolated from PON1- deficient mice were unable to prevent LDL oxidation in a cocultured cell model of the artery wall, and both HDLs and LDLs isolated from PON1- knockout mice were more susceptible to oxidation by cocultured cells

than were lipoproteins from wildtype littermates. When fed on a high- fat, high- cholesterol diet, PON1- null mice were more susceptible to atherosclerosis than were their wildtype littermates.

[30915]

[30916] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30917] Clendenning, J. B.; Humbert, R.; Green, E. D.; Wood, C.; Traver, D.; Furlong, C. E. : Structural organization of the human PON1 gene. Genomics 35: 586- 589, 1996. ; and

[30918] Shih, D. M.; Gu, L.; Xia, Y.- R.; Navab, M.; Li, W.- F.; Hama, S.; Castellani, L. W.; Furlong, C. E.; Costa, L. G.; Fogelman, A. M.; Lusis, A. J. : Mice lacking serum paraoxonase are suscepti.

[30919] Further studies establishing the function and utilities of PON1 are found in John Hopkins OMIM database record ID 168820, and in cited publications listed in Table 5, which are hereby incorporated by reference.Pou domain, class 2, associating factor 1 (POU2AF1, Accession NP_006226.1) is another GAM189 target gene, herein designated TARGET GENE. POU2AF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

POU2AF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU2AF1 BINDING SITE, designated SEQ ID:20135, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30920] Another function of GAM189 is therefore inhibition of Pou domain, class 2, associating factor 1 (POU2AF1, Accession NP_006226.1), a gene which is a transcriptional coactivator that specifically associates with either oct1 or oct2 and therefore may be associated with A form of b- cell leukemia. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of A form of b- cell leukemia, and of other diseases and clinical conditions associated with POU2AF1.

[30921] The function of POU2AF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Pou domain, class 2, transcription factor 3 (POU2F3, Accession NP_055167.1) is another GAM189 target gene, herein designated TARGET GENE. POU2F3 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by POU2F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU2F3 BINDING SITE, designated SEQ ID:16114, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30922] Another function of GAM189 is therefore inhibition of Pou domain, class 2, transcription factor 3 (POU2F3, Accession NP_055167.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POU2F3.

[30923] PP1628 (Accession NP_079477.1) is another GAM189 target gene, herein designated TARGET GENE. PP1628 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PP1628, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP1628 BINDING SITE, designated SEQ ID:10180, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30924] Another function of GAM189 is therefore inhibition of

PP1628 (Accession NP_079477.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP1628.

[30925] PP3111 (Accession NP_071439.2) is another GAM189 target gene, herein designated TARGET GENE. PP3111 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PP3111, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP3111 BINDING SITE, designated SEQ ID:10883, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30926] Another function of GAM189 is therefore inhibition of PP3111 (Accession NP_071439.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP3111.

[30927] PP3856 (Accession NP_660202.1) is another GAM189 target gene, herein designated TARGET GENE. PP3856 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PP3856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of PP3856 BINDING SITE, designated SEQ ID:10744, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30928] Another function of GAM189 is therefore inhibition of PP3856 (Accession NP_660202.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP3856.

[30929] Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_803545.1) is another GAM189 target gene, herein designated TARGET GENE. PPAP2C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPAP2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2C BINDING SITE, designated SEQ ID:7299, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30930] Another function of GAM189 is therefore inhibition of Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_803545.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with PPAP2C.

[30931] Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_808211.1) is another GAM189 target gene, herein designated TARGET GENE. PPAP2C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPAP2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2C BINDING SITE, designated SEQ ID:7299, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30932] Another function of GAM189 is therefore inhibition of Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_808211.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPAP2C.

[30933] Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_003703.1) is another GAM189 target gene, herein designated TARGET GENE. PPAP2C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPAP2C, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2C BINDING SITE, designated SEQ ID:7299, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30934] Another function of GAM189 is therefore inhibition of Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_003703.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPAP2C.

[30935] Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690911.1) is another GAM189 target gene, herein designated TARGET GENE. PPEF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPEF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPEF2 BINDING SITE, designated SEQ ID:2954, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30936] Another function of GAM189 is therefore inhibition of Protein phosphatase, ef hand calcium-binding domain 2

(PPEF2, Accession NP_690911.1), a gene which is a homolog of Drosophila rdgC. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPEF2.

[30937] The function of PPEF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690910.1) is another GAM189 target gene, herein designated TARGET GENE. PPEF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPEF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPEF2 BINDING SITE, designated SEQ ID:2954, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30938] Another function of GAM189 is therefore inhibition of Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690910.1), a gene which is a homolog of Drosophila rdgC. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with PPEF2.

[30939] The function of PPEF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_006230.2) is another GAM189 target gene, herein designated TARGET GENE. PPEF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPEF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPEF2 BINDING SITE, designated SEQ ID:2954, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30940] Another function of GAM189 is therefore inhibition of Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_006230.2), a gene which is a homolog of Drosophila rdgC. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPEF2.

[30941] The function of PPEF2 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM66.2.Protein tyrosine phosphatase, receptor type, f polypeptide (ptprf), interacting protein (liprin), alpha 4 (PPFIA4, Accession XP_046751.3) is another GAM189 target gene, herein designated TARGET GENE. PPFIA4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PPFIA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPFIA4 BINDING SITE, designated SEQ ID:16851, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30942] Another function of GAM189 is therefore inhibition of Protein tyrosine phosphatase, receptor type, f polypeptide (ptprf), interacting protein (liprin), alpha 4 (PPFIA4, Accession XP_046751.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPFIA4.

[30943] Ptprf interacting protein, binding protein 1 (liprin beta 1) (PPFIBP1, Accession NP_003613.2) is another GAM189 target gene, herein designated TARGET GENE. PPFIBP1 BINDING SITE1 through PPFIBP1 BINDING SITE3 are target bind-

ing sites found in untranslated regions of multiple transcripts of mRNA encoded by PPFIBP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPFIBP1 BINDING SITE1 through PPFIBP1 BINDING SITE3, designated SEQ ID:12217, SEQ ID:8231 and SEQ ID:10708 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30944] Another function of GAM189 is therefore inhibition of Pt-prf interacting protein, binding protein 1 (liprin beta 1) (PPFIBP1, Accession NP_003613.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPFIBP1.

[30945] Peptidylprolyl isomerase d (cyclophilin d) (PPID, Accession NP_005029.1) is another GAM189 target gene, herein designated TARGET GENE. PPID BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPID, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPID BINDING SITE, designated

SEQ ID:7378, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30946] Another function of GAM189 is therefore inhibition of Peptidylprolyl isomerase d (cyclophilin d) (PPID, Accession NP_005029.1), a gene which catalyzes the cis- trans isomerization of proline imidic peptide bonds in oligopeptides. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPID.

[30947] The function of PPID and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_055152.1) is another GAM189 target gene, herein designated TARGET GENE. PPIL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPIL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPIL2 BINDING SITE, designated SEQ ID:13122, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30948] Another function of GAM189 is therefore inhibition of Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_055152.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPIL2.

[30949] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) is another GAM189 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE, designated SEQ ID:3861, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30950] Another function of GAM189 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[30951] Protein phosphatase 1, regulatory (inhibitor) subunit 12b

(PPP1R12B, Accession NP_002472.1) is another GAM189 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE, designated SEQ ID:3861, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30952] Another function of GAM189 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[30953] Protein kinase, interferon-inducible double stranded rna dependent (PRKR, Accession NP_002750.1) is another GAM189 target gene, herein designated TARGET GENE. PRKR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRKR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PRKR BINDING SITE, designated SEQ ID:4790, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30954] Another function of GAM189 is therefore inhibition of Protein kinase, interferon-inducible double stranded rna dependent (PRKR, Accession NP_002750.1), a gene which catalyze the phosphorylation of the alpha subunit of eif2. and therefore may be associated with Huntington's disease. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Huntington's disease, and of other diseases and clinical conditions associated with PRKR.

[30955] The function of PRKR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Protein kinase, lysine deficient 3 (PRKWNK3, Accession NP_065973.1) is another GAM189 target gene, herein designated TARGET GENE. PRKWNK3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRKWNK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of PRKWNK3 BINDING SITE, designated SEQ ID:14862, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30956] Another function of GAM189 is therefore inhibition of Protein kinase, lysine deficient 3 (PRKWNK3, Accession NP_065973.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKWNK3.

[30957] Prion protein 2 (dublet) (PRND, Accession NP_036541.1) is another GAM189 target gene, herein designated TARGET GENE. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, designated SEQ ID:1539 and SEQ ID:4170 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30958] Another function of GAM189 is therefore inhibition of Prion protein 2 (dublet) (PRND, Accession NP_036541.1), a

gene which is similar to prion protein PRNP. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRND.

[30959] The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.PRO0297 (Accession NP_054800.1) is another GAM189 target gene, herein designated TARGET GENE. PRO0297 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO0297, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0297 BINDING SITE, designated SEQ ID:10574, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30960] Another function of GAM189 is therefore inhibition of PRO0297 (Accession NP_054800.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0297.

[30961] PRO0365 (Accession NP_054845.1) is another GAM189 target gene, herein designated TARGET GENE. PRO0365 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO0365, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0365 BINDING SITE, designated SEQ ID:18148, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30962] Another function of GAM189 is therefore inhibition of PRO0365 (Accession NP_054845.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0365.

[30963] PRO1048 (Accession NP_060967.1) is another GAM189 target gene, herein designated TARGET GENE. PRO1048 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO1048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO1048 BINDING SITE, designated SEQ ID:12596, to the

nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30964] Another function of GAM189 is therefore inhibition of PRO1048 (Accession NP_060967.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1048.

[30965] PRO2730 (Accession NP_079498.1) is another GAM189 target gene, herein designated TARGET GENE. PRO2730 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO2730, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2730 BINDING SITE, designated SEQ ID:2048, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30966] Another function of GAM189 is therefore inhibition of PRO2730 (Accession NP_079498.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2730.

[30967] PROM2 (Accession NP_653308.1) is another GAM189 tar-

get gene, herein designated TARGET GENE. PROM2 BINDING SITE1 and PROM2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PROM2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PROM2 BINDING SITE1 and PROM2 BINDING SITE2, designated SEQ ID:2147 and SEQ ID:13176 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30968] Another function of GAM189 is therefore inhibition of PROM2 (Accession NP_653308.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PROM2.

[30969] Prp31 pre-mrna processing factor 31 homolog (yeast) (PRPF31, Accession NP_056444.1) is another GAM189 target gene, herein designated TARGET GENE. PRPF31 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRPF31, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRPF31 BINDING SITE, designated SEQ ID:11313, to the nucleotide

sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30970] Another function of GAM189 is therefore inhibition of Prp31 pre-mrna processing factor 31 homolog (yeast) (PRPF31, Accession NP_056444.1), a gene which is likely to be involved in pre- mRNA splicing and therefore is associated with Retinitis pigmentosa. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Retinitis pigmentosa, and of other diseases and clinical conditions associated with PRPF31.

[30971] The function of PRPF31 has been established by previous studies. Using a positional cloning approach supported by bioinformatics, Vithana et al. (2001) narrowed the genomic region of the autosomal dominant retinitis pigmentosa- 11 locus (RP11; 600138) to an approximately 600-kb region between markers D19S927 and D19S781.2 on 19q13.4. Within this region, they identified the PRPF31 gene, a homolog of the S. cerevisiae pre- mRNA splicing gene Prp31 (Weidenhammer et al., 1996). PRPF31 encodes a putative 499- amino acid protein that is 20% and 38% identical to its S. cerevisiae and S. pombe homologs, respectively. The level of sequence identity to the yeast genes indicates that PRPF31 is likely to be involved in pre-

mRNA splicing. PRPF31 and its homologs all contain a region homologous to Nop, a putative snoRNA- binding domain. In yeast Prp31, the Nop domain is thought to mediate protein- RNA interactions required for spliceosome assembly. PRPF31 also has putative nuclear localization signals in its medial region, providing further evidence for a nuclear role.

[30972]

[30973] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[30974] Al- Maghtheh, M.; Vithana, E.; Tarttelin, E.; Jay, M.; Evans, K.; Moore, T.; Bhattacharya, S.; Inglehearn, C. F. : Evidence for a major retinitis pigmentosa locus on 19q13.4 (RP11), and association with a unique bimodal expressivity phenotype. Am. J. Hum. Genet. 59: 864- 871, 1996. ; and

[30975] Vithana, E. N.; Abu- Safieh, L.; Allen, M. J.; Carey, A.; Papaioannou, M.; Chakarova, C.; Al- Maghtheh, M.; Ebenezer, N. D.; Willis, C.; Moore, A. T.; Bird, A. C.; Hunt, D. M.; Bhattachary.

[30976] Further studies establishing the function and utilities of PRPF31 are found in John Hopkins OMIM database record ID 606419, and in cited publications listed in Table 5,

which are hereby incorporated by reference.Proteasome (prosome, macropain) 26s subunit, non-atpase, 9 (PSMD9, Accession NP_002804.2) is another GAM189 target gene, herein designated TARGET GENE. PSMD9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSMD9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSMD9 BINDING SITE, designated SEQ ID:17758, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30977] Another function of GAM189 is therefore inhibition of Proteasome (prosome, macropain) 26s subunit, non-atpase, 9 (PSMD9, Accession NP_002804.2), a gene which acts as a regulatory subunit of the 26 proteasome. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSMD9.

[30978] The function of PSMD9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Phosphoserine phosphatase (PSPH, Accession

NP_004568.1) is another GAM189 target gene, herein designated TARGET GENE. PSPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSPH BINDING SITE, designated SEQ ID:15044, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30979] Another function of GAM189 is therefore inhibition of Phosphoserine phosphatase (PSPH, Accession NP_004568.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSPH.

[30980] Prostaglandin e synthase (PTGES, Accession NP_004869.1) is another GAM189 target gene, herein designated TARGET GENE. PTGES BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTGES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGES BINDING SITE, designated

SEQ ID:16070, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30981] Another function of GAM189 is therefore inhibition of Prostaglandin e synthase (PTGES, Accession NP_004869.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGES.

[30982] Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1) is another GAM189 target gene, herein designated TARGET GENE. PTGIS BINDING SITE1 and PTGIS BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PTGIS, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGIS BINDING SITE1 and PTGIS BINDING SITE2, designated SEQ ID:17361 and SEQ ID:10783 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30983] Another function of GAM189 is therefore inhibition of Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1), a gene which catalyzes the isomerization

of prostaglandin h2 to prostacyclin (= prostaglandin i2). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGIS.

[30984] The function of PTGIS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_005598.3) is another GAM189 target gene, herein designated TARGET GENE. PTK2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PTK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTK2 BINDING SITE, designated SEQ ID:10355, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30985] Another function of GAM189 is therefore inhibition of Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_005598.3), a gene which involves in intracellular signal transduction pathway and is a putative homolog of chicken focal adhesion associated kinase. Accordingly,

utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTK2.

[30986] The function of PTK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Phosphorylase, glycogen; muscle (mcardle syndrome, glycogen storage disease type v) (PYGM, Accession NP_005600.1) is another GAM189 target gene, herein designated TARGET GENE. PYGM BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PYGM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PYGM BINDING SITE, designated SEQ ID:15938, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30987] Another function of GAM189 is therefore inhibition of Phosphorylase, glycogen; muscle (mcardle syndrome, glycogen storage disease type v) (PYGM, Accession NP_005600.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with PYGM.

[30988] RAB11-FIP4 (Accession NP_116321.2) is another GAM189 target gene, herein designated TARGET GENE. RAB11-FIP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB11-FIP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB11-FIP4 BINDING SITE, designated SEQ ID:13848, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30989] Another function of GAM189 is therefore inhibition of RAB11-FIP4 (Accession NP_116321.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB11-FIP4.

[30990] Rab21, member ras oncogene family (RAB21, Accession NP_055814.1) is another GAM189 target gene, herein designated TARGET GENE. RAB21 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of RAB21 BINDING SITE, designated SEQ ID:7076, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30991] Another function of GAM189 is therefore inhibition of Rab21, member ras oncogene family (RAB21, Accession NP_055814.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB21.

[30992] Rab33b, member ras oncogene family (RAB33B, Accession NP_112586.1) is another GAM189 target gene, herein designated TARGET GENE. RAB33B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB33B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB33B BINDING SITE, designated SEQ ID:7910, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30993] Another function of GAM189 is therefore inhibition of Rab33b, member ras oncogene family (RAB33B, Accession NP_112586.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with RAB33B.

[30994] Rab36, member ras oncogene family (RAB36, Accession NP_004905.1) is another GAM189 target gene, herein designated TARGET GENE. RAB36 BINDING SITE1 and RAB36 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RAB36, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB36 BINDING SITE1 and RAB36 BINDING SITE2, designated SEQ ID:808 and SEQ ID:1652 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30995] Another function of GAM189 is therefore inhibition of Rab36, member ras oncogene family (RAB36, Accession NP_004905.1), a gene which is involved in protein transport. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB36.

[30996] The function of RAB36 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Rab39, member ras oncogene family

(RAB39, Accession XP_084662.1) is another GAM189 target gene, herein designated TARGET GENE. RAB39 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB39, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB39 BINDING SITE, designated SEQ ID:3754, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30997] Another function of GAM189 is therefore inhibition of Rab39, member ras oncogene family (RAB39, Accession XP_084662.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB39.

[30998] Rab4a, member ras oncogene family (RAB4A, Accession NP_004569.2) is another GAM189 target gene, herein designated TARGET GENE. RAB4A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAB4A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB4A BINDING SITE, designated

SEQ ID:16568, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[30999] Another function of GAM189 is therefore inhibition of Rab4a, member ras oncogene family (RAB4A, Accession NP_004569.2), a gene which is involved in protein transport. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB4A.

[31000] The function of RAB4A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.2.Rab, member of ras oncogene family-like 2a (RABL2A, Accession NP_038198.1) is another GAM189 target gene, herein designated TARGET GENE. RABL2A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RABL2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RABL2A BINDING SITE, designated SEQ ID:2648, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31001] Another function of GAM189 is therefore inhibition of Rab, member of ras oncogene family-like 2a (RABL2A, Accession NP_038198.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RABL2A.

[31002] Rab, member of ras oncogene family-like 2b (RABL2B, Accession NP_009012.1) is another GAM189 target gene, herein designated TARGET GENE. RABL2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RABL2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RABL2B BINDING SITE, designated SEQ ID:2648, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31003] Another function of GAM189 is therefore inhibition of Rab, member of ras oncogene family-like 2b (RABL2B, Accession NP_009012.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RABL2B.

[31004] RAI (Accession NP_006654.1) is another GAM189 target gene, herein designated TARGET GENE. RAI BINDING SITE

is a target binding site found in the 5` untranslated region of mRNA encoded by RAI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI BINDING SITE, designated SEQ ID:8937, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31005] Another function of GAM189 is therefore inhibition of RAI (Accession NP_006654.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI.

[31006] Retinoic acid induced 16 (RAI16, Accession NP_073586.3) is another GAM189 target gene, herein designated TARGET GENE. RAI16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAI16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI16 BINDING SITE, designated SEQ ID:4335, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31007] Another function of GAM189 is therefore inhibition of

Retinoic acid induced 16 (RAI16, Accession NP_073586.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI16.

[31008] Retinoic acid induced 17 (RAI17, Accession XP_166091.2) is another GAM189 target gene, herein designated TARGET GENE. RAI17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RAI17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI17 BINDING SITE, designated SEQ ID:7523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31009] Another function of GAM189 is therefore inhibition of Retinoic acid induced 17 (RAI17, Accession XP_166091.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI17.

[31010] Retinoic acid induced 17 (RAI17, Accession NP_065071.1) is another GAM189 target gene, herein designated TARGET GENE. RAI17 BINDING SITE is a target binding site

found in the 3` untranslated region of multiple transcripts of mRNA encoded by RAI17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI17 BINDING SITE, designated SEQ ID:7523, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31011] Another function of GAM189 is therefore inhibition of Retinoic acid induced 17 (RAI17, Accession NP_065071.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI17.

[31012] Retinoic acid induced 3 (RAI3, Accession NP_003970.1) is another GAM189 target gene, herein designated TARGET GENE. RAI3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAI3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI3 BINDING SITE, designated SEQ ID:12784, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31013] Another function of GAM189 is therefore inhibition of Retinoic acid induced 3 (RAI3, Accession NP_003970.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI3.

[31014] RAP140 (Accession NP_056039.1) is another GAM189 target gene, herein designated TARGET GENE. RAP140 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAP140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAP140 BINDING SITE, designated SEQ ID:16472, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31015] Another function of GAM189 is therefore inhibition of RAP140 (Accession NP_056039.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAP140.

[31016] Retinoic acid receptor, gamma (RARG, Accession NP_000957.1) is another GAM189 target gene, herein designated TARGET GENE. RARG BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by RARG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RARG BINDING SITE, designated SEQ ID:11090, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31017] Another function of GAM189 is therefore inhibition of Retinoic acid receptor, gamma (RARG, Accession NP_000957.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RARG.

[31018] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) is another GAM189 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:19336, to the nucleotide sequence of GAM189 RNA, herein designated

GAM RNA, also designated SEQ ID:246.

[31019] Another function of GAM189 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[31020] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) is another GAM189 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:19336, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31021] Another function of GAM189 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[31022] Ras association (ralgds/af-6) domain family 2 (RASSF2,

Accession NP_739580.1) is another GAM189 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:19336, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31023] Another function of GAM189 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[31024] Retinoblastoma binding protein 1 (RBBP1, Accession NP_002883.2) is another GAM189 target gene, herein designated TARGET GENE. RBBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RBBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBBP1

BINDING SITE, designated SEQ ID:11014, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31025] Another function of GAM189 is therefore inhibition of Retinoblastoma binding protein 1 (RBBP1, Accession NP_002883.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBBP1.

[31026] Retinoblastoma binding protein 1 (RBBP1, Accession NP_075376.1) is another GAM189 target gene, herein designated TARGET GENE. RBBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RBBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBBP1 BINDING SITE, designated SEQ ID:11014, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31027] Another function of GAM189 is therefore inhibition of Retinoblastoma binding protein 1 (RBBP1, Accession NP_075376.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with RBBP1.

[31028] Retinoblastoma binding protein 1 (RBBP1, Accession NP_075377.1) is another GAM189 target gene, herein designated TARGET GENE. RBBP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RBBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBBP1 BINDING SITE, designated SEQ ID:11014, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31029] Another function of GAM189 is therefore inhibition of Retinoblastoma binding protein 1 (RBBP1, Accession NP_075377.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBBP1.

[31030] Retinoblastoma binding protein 9 (RBBP9, Accession NP_006597.2) is another GAM189 target gene, herein designated TARGET GENE. RBBP9 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RBBP9, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBBP9 BINDING SITE, designated SEQ ID:16100, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31031] Another function of GAM189 is therefore inhibition of Retinoblastoma binding protein 9 (RBBP9, Accession NP_006597.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBBP9.

[31032] Retinoblastoma-like 2 (p130) (RBL2, Accession NP_005602.2) is another GAM189 target gene, herein designated TARGET GENE. RBL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RBL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBL2 BINDING SITE, designated SEQ ID:6615, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31033] Another function of GAM189 is therefore inhibition of Retinoblastoma-like 2 (p130) (RBL2, Accession NP_005602.2), a gene which may be a tumor suppressor

and therefore may be associated with Cancer. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with RBL2.

[31034] The function of RBL2 has been established by previous studies. Mayol et al. (1993) cloned a retinoblastoma- related human gene, referred to as RB2, on the basis of sequence homology of the E1A- binding domain of the retinoblastoma gene (RB1; 180200). Structural homology with RB1 suggested a possible function of RB2 as a tumor suppressor gene. Yeung et al. (1993) mapped the gene to human chromosome 16q12.2 and rat chromosome 19, using fluorescence in situ hybridization and somatic hybrid cell analysis, respectively. Based on known syntenic relationships among human, rat and mouse, the data suggested that the mouse homolog resides on chromosome 8. Deletions of chromosome 16q have been found in several human neoplasms, including breast, ovarian, hepatic, and prostatic cancers, which supports the involvement of RB2 in human cancer as a tumor suppressor gene. This locus is symbolized RBL2 because it was identified after the gene on chromosome 20, which is symbolized RBL1 (OMIM Ref. No. 116957). RBL1 has a molecular weight of

107 kD; RBL2 has a molecular weight of about 120 kD.

[31035]

[31036] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31037] Baldi, A.; Boccia, V.; Claudio, P. P.; De Luca, A.; Giordano, A. : Genomic structure of the human retinoblastoma- related Rb2/p130 gene. Proc. Nat. Acad. Sci. 93: 4629-4632, 1996. ; and

[31038] Mayol, X.; Grana, X.; Baldi, A.; Sang, N.; Hu, Q.; Giordano, A. : Cloning of a new member of the retinoblastoma gene family (pRb2) which binds to the E1A transforming domain. Oncogene.

[31039] Further studies establishing the function and utilities of RBL2 are found in John Hopkins OMIM database record ID 180203, and in cited publications listed in Table 5, which are hereby incorporated by reference.RCBTB1 (Accession NP_060661.2) is another GAM189 target gene, herein designated TARGET GENE. RCBTB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RCBTB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of RCBTB1 BINDING SITE, designated SEQ ID:13829, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31040] Another function of GAM189 is therefore inhibition of RCBTB1 (Accession NP_060661.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RCBTB1.

[31041] RCD-8 (Accession NP_055144.2) is another GAM189 target gene, herein designated TARGET GENE. RCD-8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RCD-8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RCD-8 BINDING SITE, designated SEQ ID:13335, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31042] Another function of GAM189 is therefore inhibition of RCD-8 (Accession NP_055144.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RCD-8.

[31043] RDH13 (Accession NP_612421.1) is another GAM189 target gene, herein designated TARGET GENE. RDH13 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RDH13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDH13 BINDING SITE, designated SEQ ID:9713, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31044] Another function of GAM189 is therefore inhibition of RDH13 (Accession NP_612421.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDH13.

[31045] Regulator of g-protein signalling 3 (RGS3, Accession NP_570613.1) is another GAM189 target gene, herein designated TARGET GENE. RGS3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by RGS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS3 BINDING SITE, designated SEQ ID:3344, to the nucleotide

sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31046] Another function of GAM189 is therefore inhibition of Regulator of g-protein signalling 3 (RGS3, Accession NP_570613.1), a gene which negatively regulates G protein- coupled receptor signalling. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS3.

[31047] The function of RGS3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.Rhesus blood group, d antigen (RHD, Accession NP_057208.2) is another GAM189 target gene, herein designated TARGET GENE. RHD BINDING SITE1 and RHD BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RHD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHD BINDING SITE1 and RHD BINDING SITE2, designated SEQ ID:13465 and SEQ ID:4143 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31048] Another function of GAM189 is therefore inhibition of Rhesus blood group, d antigen (RHD, Accession NP_057208.2), a gene which Major antigen of the RH system. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHD.

[31049] The function of RHD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Rhesus blood group, d antigen (RHD, Accession NP_057309.2) is another GAM189 target gene, herein designated TARGET GENE. RHD BINDING SITE1 and RHD BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RHD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHD BINDING SITE1 and RHD BINDING SITE2, designated SEQ ID:4143 and SEQ ID:13465 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31050] Another function of GAM189 is therefore inhibition of Rhesus blood group, d antigen (RHD, Accession

NP_057309.2), a gene which Major antigen of the RH system. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHD.

[31051] The function of RHD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.RHPN2 (Accession NP_149094.2) is another GAM189 target gene, herein designated TARGET GENE. RHPN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RHPN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHPN2 BINDING SITE, designated SEQ ID:11803, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31052] Another function of GAM189 is therefore inhibition of RHPN2 (Accession NP_149094.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHPN2.

[31053] RIP60 (Accession NP_037532.1) is another GAM189 target gene, herein designated TARGET GENE. RIP60 BINDING

SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RIP60, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RIP60 BINDING SITE, designated SEQ ID:5556, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31054] Another function of GAM189 is therefore inhibition of RIP60 (Accession NP_037532.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RIP60.

[31055] RIP60 (Accession NP_055189.1) is another GAM189 target gene, herein designated TARGET GENE. RIP60 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RIP60, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RIP60 BINDING SITE, designated SEQ ID:5556, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31056] Another function of GAM189 is therefore inhibition of

RIP60 (Accession NP_055189.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RIP60.

[31057] RNF137 (Accession NP_060543.4) is another GAM189 target gene, herein designated TARGET GENE. RNF137 BINDING SITE1 and RNF137 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RNF137, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF137 BINDING SITE1 and RNF137 BINDING SITE2, designated SEQ ID:7446 and SEQ ID:16940 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31058] Another function of GAM189 is therefore inhibition of RNF137 (Accession NP_060543.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF137.

[31059] RNF144 (Accession NP_055561.1) is another GAM189 target gene, herein designated TARGET GENE. RNF144 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF144, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF144 BINDING SITE, designated SEQ ID:4727, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31060] Another function of GAM189 is therefore inhibition of RNF144 (Accession NP_055561.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF144.

[31061] Ring finger protein (c3hc4 type) 8 (RNF8, Accession NP_003949.1) is another GAM189 target gene, herein designated TARGET GENE. RNF8 BINDING SITE1 and RNF8 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RNF8, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF8 BINDING SITE1 and RNF8 BINDING SITE2, designated SEQ ID:13778 and SEQ ID:9745 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31062] Another function of GAM189 is therefore inhibition of Ring finger protein (c3hc4 type) 8 (RNF8, Accession NP_003949.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF8.

[31063] Retinitis pigmentosa 2 (x-linked recessive) (RP2, Accession NP_008846.1) is another GAM189 target gene, herein designated TARGET GENE. RP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RP2 BINDING SITE, designated SEQ ID:6582, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31064] Another function of GAM189 is therefore inhibition of Retinitis pigmentosa 2 (x-linked recessive) (RP2, Accession NP_008846.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RP2.

[31065] Rabphilin 3a-like (without c2 domains) (RPH3AL, Accession NP_008918.1) is another GAM189 target gene, herein designated TARGET GENE. RPH3AL BINDING SITE is a tar-

get binding site found in the 3` untranslated region of mRNA encoded by RPH3AL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RPH3AL BINDING SITE, designated SEQ ID:2614, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31066] Another function of GAM189 is therefore inhibition of Rabphilin 3a-like (without c2 domains) (RPH3AL, Accession NP_008918.1), a gene which is a protein transporter. could play a role in neurotransmitter release by regulating membrane flow in the nerve terminal. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RPH3AL.

[31067] The function of RPH3AL has been established by previous studies. Secretions of hormones and neurotransmitters from endocrine cells and neurons, respectively, are regulated by calcium ions, which trigger exocytosis. The RAS-associated protein RAB3A (OMIM Ref. No. 179490) is involved in the recruitment of synaptic vesicles for exocytosis. Using a DNA fragment encoding the Rab3A- binding

domain of a mouse rabphilin- 3A cDNA, Kotake et al. (1997) probed a rat islet cDNA library under low stringency. A partial rabphilin- 3A- related protein was identified and designated Noc2; a full- length Noc2 clone was isolated from a rat insulin- secreting cell line cDNA library. The Noc2 cDNA encodes a 302- amino acid protein that shows 40.7% amino acid identity and 77.9% similarity to the N- terminal region of rat rabphilin- 3A. However, it lacks the C2 domains, and hence the Noc2 (no C2 domain) designation. Noc2 contains 1 potential protein kinase A and 3 potential protein kinase C phosphorylation sites. RNA blot analysis revealed that a single 2.2- or 2.6- kb transcript of Noc2 is expressed at very high levels in pancreatic islets, and at low to moderate or high levels in other endocrine tissues and hormone- secreting cell lines, but at very low levels in brain. Screening a mouse embryonic cDNA library with the yeast 2- hybrid system, Kotake et al. (1997) showed that Noc2 interacts with the LIM domain- containing protein zyxin (OMIM Ref. No. 602002), a component of the cytoskeleton. The authors suggested that Noc2 is probably involved in regulated exocytosis in endocrine cells by interacting with the cytoskeleton Using cDNA selection, Smith et al. (1999) identified a human

transcript spanning a common deletion on 17p13.3 found in approximately 40% of medulloblastomas. The full-length coding sequence predicted a 315- amino acid protein displaying 77% amino acid identity with the rat Noc2 (OMIM Ref. No. Rph3al) protein. Northern blot analysis detected moderate to high expression of a 2.6- kb RPH3AL transcript in thyroid, ovary, stomach, heart, pancreas, skeletal muscle, kidney, and liver

[31068]

[31069] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31070] Kotake, K.; Ozaki, N.; Mizuta, M.; Sekiya, S.; Inagaki, N.; Seino, S. : Noc2, a putative zinc finger protein involved in exocytosis in endocrine cells. J. Biol. Chem. 272: 29407-29410, 1997. ; and

[31071] Smith, J. S.; Tachibana, I.; Allen, C.; Chiappa, S. A.; Lee, H. K.; McIver, B.; Jenkins, R. B.; Raffel, C. : Cloning of a human ortholog (RPH3AL) of (RNO)Rph3al from a candidate 17p13.3 med.

[31072] Further studies establishing the function and utilities of RPH3AL are found in John Hopkins OMIM database record ID 604881, and in cited publications listed in Table 5,

which are hereby incorporated by reference.RPP30 (Accession NP_006404.1) is another GAM189 target gene, herein designated TARGET GENE. RPP30 BINDING SITE1 and RPP30 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RPP30, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RPP30 BINDING SITE1 and RPP30 BINDING SITE2, designated SEQ ID:445 and SEQ ID:19325 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31073] Another function of GAM189 is therefore inhibition of RPP30 (Accession NP_006404.1), a gene which is a component of ribonuclease p that processes 5' ends of precursor tRNAs. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RPP30.

[31074] The function of RPP30 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.S100A15 (Accession NP_789793.1) is another GAM189 target gene, herein designated TARGET

GENE. S100A15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100A15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of S100A15 BINDING SITE, designated SEQ ID:19723, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31075] Another function of GAM189 is therefore inhibition of S100A15 (Accession NP_789793.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with S100A15.

[31076] SARM1 (Accession NP_055892.1) is another GAM189 target gene, herein designated TARGET GENE. SARM1 BINDING SITE1 and SARM1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SARM1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SARM1 BINDING SITE1 and SARM1 BINDING SITE2, designated SEQ ID:4282 and SEQ ID:7147

respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31077] Another function of GAM189 is therefore inhibition of SARM1 (Accession NP_055892.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM1.

[31078] Sarcoma amplified sequence (SAS, Accession NP_005972.1) is another GAM189 target gene, herein designated TARGET GENE. SAS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SAS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SAS BINDING SITE, designated SEQ ID:17726, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31079] Another function of GAM189 is therefore inhibition of Sarcoma amplified sequence (SAS, Accession NP_005972.1), a gene which is a member of the trans-membrane 4 superfamily (TM4SF) and may be involved in growth- related cellular processes T. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with SAS.

[31080] The function of SAS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM88.1.SBLF (Accession NP_006864.2) is another GAM189 target gene, herein designated TARGET GENE. SBLF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SBLF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SBLF BINDING SITE, designated SEQ ID:14551, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31081] Another function of GAM189 is therefore inhibition of SBLF (Accession NP_006864.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SBLF.

[31082] SCAMP-4 (Accession NP_524558.1) is another GAM189 target gene, herein designated TARGET GENE. SCAMP-4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCAMP-4, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAMP-4 BINDING SITE, designated SEQ ID:2153, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31083] Another function of GAM189 is therefore inhibition of SCAMP-4 (Accession NP_524558.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAMP-4.

[31084] Scan domain containing 2 (SCAND2, Accession NP_071333.2) is another GAM189 target gene, herein designated TARGET GENE. SCAND2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SCAND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAND2 BINDING SITE, designated SEQ ID:7179, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31085] Another function of GAM189 is therefore inhibition of Scan domain containing 2 (SCAND2, Accession

NP_071333.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAND2.

[31086] Scavenger receptor class f, member 1 (SCARF1, Accession NP_003684.1) is another GAM189 target gene, herein designated TARGET GENE. SCARF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCARF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCARF1 BINDING SITE, designated SEQ ID:5158, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31087] Another function of GAM189 is therefore inhibition of Scavenger receptor class f, member 1 (SCARF1, Accession NP_003684.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCARF1.

[31088] Stearoyl-coa desaturase (delta-9-desaturase) (SCD, Accession NP_005054.2) is another GAM189 target gene, herein designated TARGET GENE. SCD BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by SCD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCD BINDING SITE, designated SEQ ID:3800, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31089] Another function of GAM189 is therefore inhibition of Stearoyl-coa desaturase (delta-9-desaturase) (SCD, Accession NP_005054.2), a gene which functions in the synthesis of unsaturated fatty acids. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCD.

[31090] The function of SCD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Sex comb on midleg-like 2 (drosophila) (SCML2, Accession NP_006080.1) is another GAM189 target gene, herein designated TARGET GENE. SCML2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCML2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of SCML2 BINDING SITE, designated SEQ ID:3898, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31091] Another function of GAM189 is therefore inhibition of Sex comb on midleg-like 2 (drosophila) (SCML2, Accession NP_006080.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCML2.

[31092] Sodium channel, voltage-gated, type ii, beta polypeptide (SCN2B, Accession NP_004579.1) is another GAM189 target gene, herein designated TARGET GENE. SCN2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN2B BINDING SITE, designated SEQ ID:13704, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31093] Another function of GAM189 is therefore inhibition of Sodium channel, voltage-gated, type ii, beta polypeptide (SCN2B, Accession NP_004579.1), a gene which modulates

channel properties. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN2B.

[31094] The function of SCN2B has been established by previous studies. Jones et al. (1996) used a rat brain Scn2b cDNA to map the mouse gene in interspecific backcrosses. They found that it is linked to markers from the central region of mouse chromosome 9 and noted that the neurologic mutation 'staggerer' (Imai and Kingsley, 1994) had been mapped there also. No recombination was found with the Il10r gene (OMIM Ref. No. 146933). Thus, mouse Scn2b is located within a conserved linkage group with orthologs on human chromosome 11q22- qter. By fluorescence in situ hybridization, Eubanks et al. (1997) mapped the SCN2B gene to 11q23. Bolino et al. (1998) reported that the SCN2B gene consists of 4 exons and 3 introns spanning a region of approximately 12 kb

[31095]

[31096] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31097] Bolino, A.; Seri, M.; Caroli, F.; Eubanks, J.; Srinivasan, J.; Mandich, P.; Schenone, A.; Quattrone, A.; Romeo, G.; Cat-

terall, W. A.; Devoto, M. : Exclusion of the SCN2B gene as candidate for CMT4B. Europ. J. Hum. Genet. 6: 629- 634, 1998. ; and

[31098] Eubanks, J.; Srinivasan, J.; Dinulos, M. B.; Disteche, C. M.; Catterall, W. A. : Structure and chromosomal localization of the beta2 subunit of the human brain sodium channel. Neurorepo.

[31099] Further studies establishing the function and utilities of SCN2B are found in John Hopkins OMIM database record ID 601327, and in cited publications listed in Table 5, which are hereby incorporated by reference.SCN3B (Accession NP_060870.1) is another GAM189 target gene, herein designated TARGET GENE. SCN3B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCN3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN3B BINDING SITE, designated SEQ ID:4399, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31100] Another function of GAM189 is therefore inhibition of SCN3B (Accession NP_060870.1) . Accordingly, utilities of

GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN3B.

[31101] SDS-RS1 (Accession NP_612441.1) is another GAM189 target gene, herein designated TARGET GENE. SDS-RS1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SDS-RS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SDS-RS1 BINDING SITE, designated SEQ ID:14127, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31102] Another function of GAM189 is therefore inhibition of SDS-RS1 (Accession NP_612441.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SDS-RS1.

[31103] Spondyloepiphyseal dysplasia, late (SEDL, Accession NP_055378.1) is another GAM189 target gene, herein designated TARGET GENE. SEDL BINDING SITE1 through SEDL BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by SEDL, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEDL BINDING SITE1 through SEDL BINDING SITE3, designated SEQ ID:15576, SEQ ID:11591 and SEQ ID:926 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31104] Another function of GAM189 is therefore inhibition of Spondyloepiphyseal dysplasia, late (SEDL, Accession NP_055378.1), a gene which may play role in vesicular transport from endoplasmic reticulum to golgi. and therefore may be associated with Spondyloepiphyseal dysplasia. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Spondyloepiphyseal dysplasia, and of other diseases and clinical conditions associated with SEDL.

[31105] The function of SEDL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3e (SEMA3E, Accession NP_036563.1) is another GAM189 target gene, herein designated TARGET GENE. SEMA3E BINDING SITE is a target binding site found in the 3` untranslated region

of mRNA encoded by SEMA3E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEMA3E BINDING SITE, designated SEQ ID:13353, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31106] Another function of GAM189 is therefore inhibition of Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3e (SEMA3E, Accession NP_036563.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA3E.

[31107] Selenoprotein n, 1 (SEPN1, Accession NP_065184.1) is another GAM189 target gene, herein designated TARGET GENE. SEPN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEPN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEPN1 BINDING SITE, designated SEQ ID:18255, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31108] Another function of GAM189 is therefore inhibition of Selenoprotein n, 1 (SEPN1, Accession NP_065184.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEPN1.

[31109] Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) is another GAM189 target gene, herein designated TARGET GENE. SERF1A BINDING SITE1 and SERF1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERF1A, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1A BINDING SITE1 and SERF1A BINDING SITE2, designated SEQ ID:15849 and SEQ ID:9219 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31110] Another function of GAM189 is therefore inhibition of Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1A.

[31111] Small edrk-rich factor 1b (centromeric) (SERF1B, Accession

NP_075267.1) is another GAM189 target gene, herein designated TARGET GENE. SERF1B BINDING SITE1 and SERF1B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERF1B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1B BINDING SITE1 and SERF1B BINDING SITE2, designated SEQ ID:15849 and SEQ ID:9219 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31112] Another function of GAM189 is therefore inhibition of Small edrk-rich factor 1b (centromeric) (SERF1B, Accession NP_075267.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1B.

[31113] Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 9 (SERPINB9, Accession NP_004146.1) is another GAM189 target gene, herein designated TARGET GENE. SERPINB9 BINDING SITE1 and SERPINB9 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERPINB9, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINB9 BINDING SITE1 and SERPINB9 BINDING SITE2, designated SEQ ID:4363 and SEQ ID:9152 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31114] Another function of GAM189 is therefore inhibition of Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 9 (SERPINB9, Accession NP_004146.1), a gene which may be a serpin serine protease inhibitor that interacts with granzyme B (GZMB). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINB9.

[31115] The function of SERPINB9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM88.2.Sideroflexin 2 (SFXN2, Accession XP_058359.2) is another GAM189 target gene, herein designated TARGET GENE. SFXN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SFXN2, corresponding to a target binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SFXN2 BINDING SITE, designated SEQ ID:3678, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31116] Another function of GAM189 is therefore inhibition of Sideroflexin 2 (SFXN2, Accession XP_058359.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFXN2.

[31117] Sideroflexin 2 (SFXN2, Accession NP_849189.1) is another GAM189 target gene, herein designated TARGET GENE. SFXN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SFXN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SFXN2 BINDING SITE, designated SEQ ID:3678, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31118] Another function of GAM189 is therefore inhibition of Sideroflexin 2 (SFXN2, Accession NP_849189.1) . Accordingly, utilities of GAM189 include diagnosis, prevention

and treatment of diseases and clinical conditions associated with SFXN2.

[31119] Sh3 domain binding glutamic acid-rich protein like 2 (SH3BGRL2, Accession NP_113657.1) is another GAM189 target gene, herein designated TARGET GENE. SH3BGRL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SH3BGRL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3BGRL2 BINDING SITE, designated SEQ ID:2741, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31120] Another function of GAM189 is therefore inhibition of Sh3 domain binding glutamic acid-rich protein like 2 (SH3BGRL2, Accession NP_113657.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BGRL2.

[31121] Sh3-domain binding protein 2 (SH3BP2, Accession NP_003014.2) is another GAM189 target gene, herein designated TARGET GENE. SH3BP2 BINDING SITE1 through SH3BP2 BINDING SITE3 are target binding sites found in

untranslated regions of mRNA encoded by SH3BP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3BP2 BINDING SITE1 through SH3BP2 BINDING SITE3, designated SEQ ID:3836, SEQ ID:9440 and SEQ ID:1122 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31122] Another function of GAM189 is therefore inhibition of Sh3-domain binding protein 2 (SH3BP2, Accession NP_003014.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BP2.

[31123] Short stature homeobox (SHOX, Accession NP_006874.1) is another GAM189 target gene, herein designated TARGET GENE. SHOX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SHOX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHOX BINDING SITE, designated SEQ ID:4375, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:246.

[31124] Another function of GAM189 is therefore inhibition of Short stature homeobox (SHOX, Accession NP_006874.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHOX.

[31125] Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1) is another GAM189 target gene, herein designated TARGET GENE. SIGLEC8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIGLEC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIGLEC8 BINDING SITE, designated SEQ ID:4513, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31126] Another function of GAM189 is therefore inhibition of Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1), a gene which is a cell adhesion molecule for postnatal neural development. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIGLEC8.

[31127] The function of SIGLEC8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Tal1 (scl) interrupting locus (SIL, Accession NP_003026.1) is another GAM189 target gene, herein designated TARGET GENE. SIL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIL BINDING SITE, designated SEQ ID:12411, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31128] Another function of GAM189 is therefore inhibition of Tal1 (scl) interrupting locus (SIL, Accession NP_003026.1), a gene which may be required for axial development and left- right specification and therefore may be associated with Prominent midline neural tube defects, abnormal left- right development. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Prominent midline neural tube defects, abnormal left- right development, and of other diseases and clinical conditions associated with SIL.

[31129] The function of SIL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Signal-regulatory protein beta 1 (SIRPB1, Accession NP_006056.1) is another GAM189 target gene, herein designated TARGET GENE. SIRPB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIRPB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIRPB1 BINDING SITE, designated SEQ ID:14771, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31130] Another function of GAM189 is therefore inhibition of Signal-regulatory protein beta 1 (SIRPB1, Accession NP_006056.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIRPB1.

[31131] Src-like-adaptor 2 (SLA2, Accession NP_115590.1) is another GAM189 target gene, herein designated TARGET GENE. SLA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of

mRNA encoded by SLA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLA2 BINDING SITE, designated SEQ ID:19573, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31132] Another function of GAM189 is therefore inhibition of Src-like-adaptor 2 (SLA2, Accession NP_115590.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLA2.

[31133] Src-like-adaptor 2 (SLA2, Accession NP_778252.1) is another GAM189 target gene, herein designated TARGET GENE. SLA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SLA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLA2 BINDING SITE, designated SEQ ID:19573, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31134] Another function of GAM189 is therefore inhibition of Src-like-adaptor 2 (SLA2, Accession NP_778252.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLA2.

[31135] Solute carrier family 12 (potassium/chloride transporters), member 8 (SLC12A8, Accession NP_078904.1) is another GAM189 target gene, herein designated TARGET GENE. SLC12A8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC12A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC12A8 BINDING SITE, designated SEQ ID:5190, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31136] Another function of GAM189 is therefore inhibition of Solute carrier family 12 (potassium/chloride transporters), member 8 (SLC12A8, Accession NP_078904.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC12A8.

[31137] Solute carrier family 13 (sodium/sulfate symporters),

member 1 (SLC13A1, Accession NP_071889.2) is another GAM189 target gene, herein designated TARGET GENE. SLC13A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC13A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC13A1 BINDING SITE, designated SEQ ID:4370, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31138] Another function of GAM189 is therefore inhibition of Solute carrier family 13 (sodium/sulfate symporters), member 1 (SLC13A1, Accession NP_071889.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC13A1.

[31139] Solute carrier family 14 (urea transporter), member 2 (SLC14A2, Accession NP_009094.2) is another GAM189 target gene, herein designated TARGET GENE. SLC14A2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC14A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of SLC14A2 BINDING SITE, designated SEQ ID:4514, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31140] Another function of GAM189 is therefore inhibition of Solute carrier family 14 (urea transporter), member 2 (SLC14A2, Accession NP_009094.2), a gene which is a renal urea transporter 2. and therefore may be associated with Orthostatic hypotension. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Orthostatic hypotension, and of other diseases and clinical conditions associated with SLC14A2.

[31141] The function of SLC14A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM97.1.Solute carrier family 15 (oligopeptide transporter), member 1 (SLC15A1, Accession NP_005064.1) is another GAM189 target gene, herein designated TARGET GENE. SLC15A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC15A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of SLC15A1 BINDING SITE, designated SEQ ID:18930, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31142] Another function of GAM189 is therefore inhibition of Solute carrier family 15 (oligopeptide transporter), member 1 (SLC15A1, Accession NP_005064.1), a gene which is a H(+)- coupled peptide transporter. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC15A1.

[31143] The function of SLC15A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Solute carrier family 16 (monocarboxylic acid transporters), member 4 (SLC16A4, Accession NP_004687.1) is another GAM189 target gene, herein designated TARGET GENE. SLC16A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC16A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC16A4 BIND-

ING SITE, designated SEQ ID:611, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31144] Another function of GAM189 is therefore inhibition of Solute carrier family 16 (monocarboxylic acid transporters), member 4 (SLC16A4, Accession NP_004687.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC16A4.

[31145] Solute carrier family 19, member 3 (SLC19A3, Accession NP_079519.1) is another GAM189 target gene, herein designated TARGET GENE. SLC19A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC19A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC19A3 BINDING SITE, designated SEQ ID:6713, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31146] Another function of GAM189 is therefore inhibition of Solute carrier family 19, member 3 (SLC19A3, Accession NP_079519.1) . Accordingly, utilities of GAM189 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC19A3.

[31147] Solute carrier family 1 (neutral amino acid transporter), member 5 (SLC1A5, Accession NP_005619.1) is another GAM189 target gene, herein designated TARGET GENE. SLC1A5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC1A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC1A5 BINDING SITE, designated SEQ ID:1277, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31148] Another function of GAM189 is therefore inhibition of Solute carrier family 1 (neutral amino acid transporter), member 5 (SLC1A5, Accession NP_005619.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC1A5.

[31149] Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1) is another GAM189 target gene, herein designated TARGET GENE. SLC24A1 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by SLC24A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC24A1 BINDING SITE, designated SEQ ID:10966, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31150] Another function of GAM189 is therefore inhibition of Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1), a gene which is a critical component of the visual transduction cascade, controlling the calcium concentration of outer segments during light and darkness. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC24A1.

[31151] The function of SLC24A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.SLC30A5 (Accession NP_076960.1) is another GAM189 target gene, herein designated TARGET GENE. SLC30A5 BINDING SITE is a target binding site

found in the 3` untranslated region of multiple transcripts of mRNA encoded by SLC30A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC30A5 BINDING SITE, designated SEQ ID:3692, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31152] Another function of GAM189 is therefore inhibition of SLC30A5 (Accession NP_076960.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC30A5.

[31153] SLC30A6 (Accession NP_060434.2) is another GAM189 target gene, herein designated TARGET GENE. SLC30A6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC30A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC30A6 BINDING SITE, designated SEQ ID:5362, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31154] Another function of GAM189 is therefore inhibition of SLC30A6 (Accession NP_060434.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC30A6.

[31155] SLC35E2 (Accession XP_049733.6) is another GAM189 target gene, herein designated TARGET GENE. SLC35E2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC35E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E2 BINDING SITE, designated SEQ ID:13336, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31156] Another function of GAM189 is therefore inhibition of SLC35E2 (Accession XP_049733.6) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E2.

[31157] Solute carrier family 39 (zinc transporter), member 1 (SLC39A1, Accession NP_055252.2) is another GAM189 target gene, herein designated TARGET GENE. SLC39A1

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC39A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC39A1 BINDING SITE, designated SEQ ID:9528, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31158] Another function of GAM189 is therefore inhibition of Solute carrier family 39 (zinc transporter), member 1 (SLC39A1, Accession NP_055252.2), a gene which is a divalent (zinc/iron) metal ion transporter. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC39A1.

[31159] The function of SLC39A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1.Solute carrier family 4, sodium bicarbonate transporter-like, member 11 (SLC4A11, Accession NP_114423.1) is another GAM189 target gene, herein designated TARGET GENE. SLC4A11 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by SLC4A11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC4A11 BINDING SITE, designated SEQ ID:806, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31160] Another function of GAM189 is therefore inhibition of Solute carrier family 4, sodium bicarbonate transporter-like, member 11 (SLC4A11, Accession NP_114423.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC4A11.

[31161] Solute carrier family 5 (sodium/glucose cotransporter), member 1 (SLC5A1, Accession NP_000334.1) is another GAM189 target gene, herein designated TARGET GENE. SLC5A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC5A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC5A1 BINDING SITE, designated SEQ ID:2571, to the nucleotide sequence of GAM189 RNA, herein designated

GAM RNA, also designated SEQ ID:246.

[31162] Another function of GAM189 is therefore inhibition of Solute carrier family 5 (sodium/glucose cotransporter), member 1 (SLC5A1, Accession NP_000334.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC5A1.

[31163] Solute carrier family 6 (neurotransmitter transporter), member 14 (SLC6A14, Accession NP_009162.1) is another GAM189 target gene, herein designated TARGET GENE. SLC6A14 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A14 BINDING SITE, designated SEQ ID:13830, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31164] Another function of GAM189 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter), member 14 (SLC6A14, Accession NP_009162.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with SLC6A14.

[31165] Solute carrier family 6 (neurotransmitter transporter, dopamine), member 3 (SLC6A3, Accession NP_001035.1) is another GAM189 target gene, herein designated TARGET GENE. SLC6A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A3 BINDING SITE, designated SEQ ID:12941, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31166] Another function of GAM189 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter, dopamine), member 3 (SLC6A3, Accession NP_001035.1), a gene which terminates the action of dopamine by its high affinity sodium- dependent reuptake into presynaptic terminals. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A3.

[31167] The function of SLC6A3 has been established by previous studies. Giros et al. (1996) found that the disruption of

the mouse dopamine transporter gene results in spontaneous hyperlocomotion despite major adaptive changes such as decreases in neurotransmitter and receptor levels. In homozygous mice, dopamine persisted at least 100 times longer in the extracellular space, providing a biochemical explanation of the hyperdopaminergic phenotype and demonstrating the critical role of the transporter in regulating neurotransmission. The authors noted that the dopamine transporter is an obligatory target of cocaine and amphetamine, as demonstrated by the fact that these psychostimulants had no effect on locomotor activity or dopamine release and uptake in mice lacking the transporter. Giros et al. (1996) stated that the DAT knockout mice should be an excellent tool for the study and development of drugs used in the management of dopaminergic dysfunction. There are similarities between the hyperdopaminergic phenotype of the knockout mice and some of the positive symptoms of schizophrenic patients. Specific blockade of the dopamine transporter with high-affinity inhibitors may be beneficial in illnesses such as Parkinson disease, where the effective levels of dopamine are markedly reduced.

[31168]

[31169] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31170] Gainetdinov, R. R.; Wetsel, W. C.; Jones, S. R.; Levin, E. D.; Jaber, M.; Caron, M. G. : Role of serotonin in the paradoxical calming effect of psychostimulants on hyperactivity. Science 283: 397- 401, 1999. ; and

[31171] Giros, B.; Jaber, M.; Jones, S. R.; Wightman, R. M.; Caron, M. G. : Hyperlocomotion and indifference to cocaine and amphetamine in mice lacking the dopamine receptor. Nature 370: 606- 612, 1.

[31172] Further studies establishing the function and utilities of SLC6A3 are found in John Hopkins OMIM database record ID 126455, and in cited publications listed in Table 5, which are hereby incorporated by reference.SMAC (Accession NP_620308.1) is another GAM189 target gene, herein designated TARGET GENE. SMAC BINDING SITE1 and SMAC BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SMAC, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMAC BINDING SITE1 and SMAC

BINDING SITE2, designated SEQ ID:18165 and SEQ ID:1861 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31173] Another function of GAM189 is therefore inhibition of SMAC (Accession NP_620308.1), a gene which promotes apoptosis via caspase activation. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMAC.

[31174] The function of SMAC and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_570710.1) is another GAM189 target gene, herein designated TARGET GENE. SNAP23 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNAP23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNAP23 BINDING SITE, designated SEQ ID:19007, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31175] Another function of GAM189 is therefore inhibition of Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_570710.1), a gene which is essential component of the high affinity receptor for the general membrane fusion machinery. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAP23.

[31176] The function of SNAP23 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_003816.2) is another GAM189 target gene, herein designated TARGET GENE. SNAP23 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNAP23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNAP23 BINDING SITE, designated SEQ ID:19007, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31177] Another function of GAM189 is therefore inhibition of

Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_003816.2), a gene which is essential component of the high affinity receptor for the general membrane fusion machinery. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAP23.

[31178] The function of SNAP23 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.SNARK (Accession NP_112214.1) is another GAM189 target gene, herein designated TARGET GENE. SNARK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNARK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNARK BINDING SITE, designated SEQ ID:18622, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31179] Another function of GAM189 is therefore inhibition of SNARK (Accession NP_112214.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNARK.

[31180] Syntaphilin (SNPH, Accession NP_055538.1) is another GAM189 target gene, herein designated TARGET GENE. SNPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNPH BINDING SITE, designated SEQ ID:15041, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31181] Another function of GAM189 is therefore inhibition of Syntaphilin (SNPH, Accession NP_055538.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNPH.

[31182] Sorting nexin 15 (SNX15, Accession NP_037438.2) is another GAM189 target gene, herein designated TARGET GENE. SNX15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX15 BINDING SITE,

designated SEQ ID:7625, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31183] Another function of GAM189 is therefore inhibition of Sorting nexin 15 (SNX15, Accession NP_037438.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX15.

[31184] Sorting nexin 15 (SNX15, Accession NP_680086.1) is another GAM189 target gene, herein designated TARGET GENE. SNX15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX15 BINDING SITE, designated SEQ ID:7625, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31185] Another function of GAM189 is therefore inhibition of Sorting nexin 15 (SNX15, Accession NP_680086.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with SNX15.

[31186] SNX22 (Accession NP_079074.1) is another GAM189 target gene, herein designated TARGET GENE. SNX22 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNX22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX22 BINDING SITE, designated SEQ ID:13596, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31187] Another function of GAM189 is therefore inhibition of SNX22 (Accession NP_079074.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX22.

[31188] SNX27 (Accession NP_112180.4) is another GAM189 target gene, herein designated TARGET GENE. SNX27 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNX27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX27 BINDING SITE, designated SEQ ID:16941, to the nucleotide

sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31189] Another function of GAM189 is therefore inhibition of SNX27 (Accession NP_112180.4) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX27.

[31190] Sialophorin (gpl115, leukosialin, cd43) (SPN, Accession NP_003114.1) is another GAM189 target gene, herein designated TARGET GENE. SPN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPN BINDING SITE, designated SEQ ID:16209, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31191] Another function of GAM189 is therefore inhibition of Sialophorin (gpl115, leukosialin, cd43) (SPN, Accession NP_003114.1), a gene which plays a role in the physico-chemical properties of the t- cell surface and in lectin binding. presents carbohydrate ligands to selectins. . and therefore may be associated with Wiskott- aldrich syn-

drome. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Wiskott- aldrich syndrome, and of other diseases and clinical conditions associated with SPN.

[31192] The function of SPN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Speckle-type poz protein (SPOP, Accession NP_003554.1) is another GAM189 target gene, herein designated TARGET GENE. SPOP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SPOP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPOP BINDING SITE, designated SEQ ID:5610, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31193] Another function of GAM189 is therefore inhibition of Speckle-type poz protein (SPOP, Accession NP_003554.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPOP.

[31194] SQV7L (Accession XP_047287.1) is another GAM189 target

gene, herein designated TARGET GENE. SQV7L BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SQV7L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SQV7L BINDING SITE, designated SEQ ID:7375, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31195] Another function of GAM189 is therefore inhibition of SQV7L (Accession XP_047287.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SQV7L.

[31196] Sarcalumenin (SRL, Accession XP_064152.3) is another GAM189 target gene, herein designated TARGET GENE. SRL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SRL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRL BINDING SITE, designated SEQ ID:6681, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31197] Another function of GAM189 is therefore inhibition of Sarcalumenin (SRL, Accession XP_064152.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRL.

[31198] Serine/arginine repetitive matrix 2 (SRRM2, Accession NP_057417.2) is another GAM189 target gene, herein designated TARGET GENE. SRRM2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SRRM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRRM2 BINDING SITE, designated SEQ ID:18975, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31199] Another function of GAM189 is therefore inhibition of Serine/arginine repetitive matrix 2 (SRRM2, Accession NP_057417.2), a gene which RELATED NUCLEAR MATRIX PROTEIN. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRRM2.

[31200] The function of SRRM2 has been established by previous

studies. For background information on SRM proteins, see SRM160 (OMIM Ref. No. 605975). By biochemical purification, micropeptide sequence analysis, EST database searching, and screening a monocytoid cDNA library, Blencowe et al. (2000) isolated a cDNA encoding SRM300. Like SRM160, the deduced 2,296- amino acid SRM300 protein is rich in serine (S), arginine (R), and proline (P), has numerous SR dipeptides and 2 long polyserine domains, and lacks an RNA recognition domain. A portion of the SRM300 protein is identical to a partial protein, KIAA0324, identified by Nagase et al. (1997). By RT- PCR analysis, Nagase et al. (1997) detected ubiquitous expression of KIAA0324. Using immunoblot and immunoprecipitation analyses and confocal microscopy, Blencowe et al. (2000) confirmed that SRM300 associates with SRM160 and pre- mRNA and is localized in nuclear speckles. Reconstitution of SRM160/SRM300- depleted splicing reactions with recombinant SRM160 restored splicing activity, suggesting that SRM160 is the more important component of the complex. By screening a cDNA library for RNA ligands, Sawada et al. (2000) identified a cDNA encoding SRM300, which they termed SRL300. The deduced 2,752- amino acid protein has multiple R, S, and P residues, nu-

merous phosphorylation sites, and a predicted molecular mass of 300 kD, suggesting that it may be the full- length protein. Immunoblot analysis detected GST fusion proteins of greater than 300 kD in human and rat cells. Northern blot analysis revealed expression of a 9.0- to 10.0- kb SRL300 transcript in all tissues and cell lines tested. By radiation hybrid analysis, Nagase et al. (1997) mapped the SRM300 gene, or KIAA0324, to chromosome 16. By genomic sequence analysis, Blencowe et al. (2000) mapped the SRM300 gene to chromosome 16.

[31201]

[31202] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31203] Blencowe, B. J.; Bauren, G.; Eldridge, A. G.; Issner, R.; Nickerson, J. A.; Rosonina, E.; Sharp, P. A. : The SRm160/300 splicing coactivator subunits. RNA 6: 111-120, 2000. ; and

[31204] Sawada, Y.; Miura, Y.; Umeki, K.; Tamaoki, T.; Fujinaga, K.; Ohtaki, S. : Cloning and characterization of a novel RNA-binding protein SRL300 with RS domains. Biochim. Biophys. Acta 1492.

[31205] Further studies establishing the function and utilities of

SRRM2 are found in John Hopkins OMIM database record ID 606032, and in cited publications listed in Table 5, which are hereby incorporated by reference.Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1) is another GAM189 target gene, herein designated TARGET GENE. SS18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SS18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SS18 BINDING SITE, designated SEQ ID:17762, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31206] Another function of GAM189 is therefore inhibition of Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1), a gene which is a putative transcriptional activator. and therefore is associated with Human synovial sarcomas. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Human synovial sarcomas., and of other diseases and clinical conditions associated with SS18.

[31207] The function of SS18 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.STAF65(gamma) (Accession NP_055675.1) is another GAM189 target gene, herein designated TARGET GENE. STAF65(gamma) BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STAF65(gamma), corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAF65(gamma) BINDING SITE, designated SEQ ID:2196, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31208] Another function of GAM189 is therefore inhibition of STAF65(gamma) (Accession NP_055675.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAF65(gamma).

[31209] Staufen, rna binding protein (drosophila) (STAU, Accession NP_004593.1) is another GAM189 target gene, herein designated TARGET GENE. STAU BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by STAU, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAU BINDING SITE, designated SEQ ID:3950, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31210] Another function of GAM189 is therefore inhibition of Staufen, rna binding protein (drosophila) (STAU, Accession NP_004593.1), a gene which may play a role in specific positioning of mrnas at given sites in the cell and in stimulating their translation at the site. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU.

[31211] The function of STAU and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM37.1.Sulfotransferase, estrogen-preferring (STE, Accession NP_005411.1) is another GAM189 target gene, herein designated TARGET GENE. STE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of STE BINDING SITE, designated SEQ ID:3303, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31212] Another function of GAM189 is therefore inhibition of Sulfotransferase, estrogen-preferring (STE, Accession NP_005411.1), a gene which sulfates estrone and dehydroepiandrosterone, but not dopamine. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STE.

[31213] The function of STE has been established by previous studies. Sulfation is an important pathway in the biotransformation of steroid hormones such as estrogens. Human liver contains 2 different types of sulfotransferases, dehydroepiandrosterone (DHEA) sulfotransferase (OMIM Ref. No. 125263) and phenol sulfotransferase (STP1; 171150). Aksoy et al. (1994) set out to test the possibility that human tissues may contain 1 or more estrogen sulfotransferases orthologous to the proteins encoded by EST cDNAs that had been cloned from other mammalian species. They succeeded in cloning a cDNA for human liver EST and studied selected properties of the protein that it encodes. Estrone sulfate is the predominant form of estro-

gen found in the circulation in women and could thus serve as precursor for active estrogens in target tissues by removal of the sulfate group through the action of endogenous steroid sulfatase. Bernier et al. (1994) used a cDNA encoding human placental estrogen sulfotransferase as a probe for isolating a clone containing almost the whole genomic sequence. The gene contains 9 short exons separated by 8 introns in an expanse of approximately 7.7 kb. The first 2 exons, named exon 1a and exon 1b, are noncoding and correspond to the 5- prime untranslated sequences of human brain and human placental estrogen sulfotransferase cDNAs, respectively. Transfection of chloramphenicol acetyltransferase reporter gene vectors containing the 5- prime flanking sequence upstream from exon 1a and exon 1b into human adrenal adenocarcinoma cells indicated that both sequences possess promoter activity. The results were interpreted as indicating that human brain aryl sulfotransferase and placental estrogen sulfotransferase mRNA species are transcribed from a single gene by alternate exon 1a and exon 1b promoters, respectively. Using DNA from panels of human- rodent somatic cell hybrids and amplification of the gene by PCR, Bernier et al. (1994) assigned the placental

estrogen sulfotransferase gene to chromosome 16. On the other hand, Her et al. (1995) mapped liver estrogen sulfotransferase cDNA to 4q13.1 by fluorescence in situ hybridization, suggesting that these may be 2 separate genes. They found that the liver STE gene spans approximately 20 kb and consists of 8 exons, ranging in length from 95 to 181 bp. The locations of most exon- intron splice junctions within STE were identical to those found in a human phenol ST gene (STM; 600641). (The STM gene maps to chromosome 16p11.2. Indeed, STM is the same as the 'placental estrogen sulfotransferase' gene mapped by Bernier et al. (1994) to chromosome 16 (Weinshilboum, 1995).) In addition, the locations of 5 STE introns were conserved in the human DHEA- sulfotransferase gene, which is located on chromosome 19. Weinshilboum et al. (1997) reviewed the genes in the mouse corresponding to the sulfotransferase genes in the human. The Ste gene is located on mouse chromosome 5.

[31214]

[31215] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31216] Aksoy, I. A.; Wood, T. C.; Weinshilboum, R. : Human liver

estrogen sulfotransferase: identification by cDNA cloning and expression. Biochem. Biophys. Res. Commun. 200: 1621- 1629, 1994. ; and

[31217] Bernier, F.; Leblanc, G.; Labrie, F.; Luu- The, V. : Structure of human estrogen and aryl sulfotransferase gene: two mRNA species issued from a single gene. J. Biol. Chem. 269: 28200- 282.

[31218] Further studies establishing the function and utilities of STE are found in John Hopkins OMIM database record ID 600043, and in cited publications listed in Table 5, which are hereby incorporated by reference.Six transmembrane epithelial antigen of prostate 2 (STEAP2, Accession NP_694544.1) is another GAM189 target gene, herein designated TARGET GENE. STEAP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STEAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STEAP2 BINDING SITE, designated SEQ ID:9147, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31219] Another function of GAM189 is therefore inhibition of Six

transmembrane epithelial antigen of prostate 2 (STEAP2, Accession NP_694544.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STEAP2.

[31220] Stomatin (STOM, Accession NP_004090.3) is another GAM189 target gene, herein designated TARGET GENE. STOM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STOM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STOM BINDING SITE, designated SEQ ID:2907, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31221] Another function of GAM189 is therefore inhibition of Stomatin (STOM, Accession NP_004090.3) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STOM.

[31222] Syntaxin 12 (STX12, Accession NP_803173.1) is another GAM189 target gene, herein designated TARGET GENE. STX12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STX12, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STX12 BINDING SITE, designated SEQ ID:12575, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31223] Another function of GAM189 is therefore inhibition of Syntaxin 12 (STX12, Accession NP_803173.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STX12.

[31224] Synaptotagmin xi (SYT11, Accession NP_689493.2) is another GAM189 target gene, herein designated TARGET GENE. SYT11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SYT11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT11 BINDING SITE, designated SEQ ID:9033, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31225] Another function of GAM189 is therefore inhibition of Synaptotagmin xi (SYT11, Accession NP_689493.2) . Ac-

cordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT11.

[31226] Synaptotagmin xiii (SYT13, Accession NP_065877.1) is another GAM189 target gene, herein designated TARGET GENE. SYT13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SYT13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT13 BINDING SITE, designated SEQ ID:15294, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31227] Another function of GAM189 is therefore inhibition of Synaptotagmin xiii (SYT13, Accession NP_065877.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT13.

[31228] TADA3L (Accession NP_597814.1) is another GAM189 target gene, herein designated TARGET GENE. TADA3L BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TADA3L, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TADA3L BINDING SITE, designated SEQ ID:9087, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31229] Another function of GAM189 is therefore inhibition of TADA3L (Accession NP_597814.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TADA3L.

[31230] T-cell acute lymphocytic leukemia 1 (TAL1, Accession NP_003180.1) is another GAM189 target gene, herein designated TARGET GENE. TAL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TAL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAL1 BINDING SITE, designated SEQ ID:18260, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31231] Another function of GAM189 is therefore inhibition of T-cell acute lymphocytic leukemia 1 (TAL1, Accession

NP_003180.1), a gene which may help control cell growth and differentiation. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAL1.

[31232] The function of TAL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tap binding protein (tapasin) (TAPBP, Accession NP_003181.3) is another GAM189 target gene, herein designated TARGET GENE. TAPBP BINDING SITE1 through TAPBP BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TAPBP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAPBP BINDING SITE1 through TAPBP BINDING SITE3, designated SEQ ID:11523, SEQ ID:12247 and SEQ ID:16940 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31233] Another function of GAM189 is therefore inhibition of Tap binding protein (tapasin) (TAPBP, Accession NP_003181.3), a gene which is involved in MHC class I-

restricted antigen processing. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAPBP.

[31234] The function of TAPBP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Tyrosine aminotransferase (TAT, Accession NP_000344.1) is another GAM189 target gene, herein designated TARGET GENE. TAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAT BINDING SITE, designated SEQ ID:18942, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31235] Another function of GAM189 is therefore inhibition of Tyrosine aminotransferase (TAT, Accession NP_000344.1), a gene which is tyrosine aminotransferase and strongly similar to rat Rn.9947, which plays a role in gluconeogenesis. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with TAT.

[31236] The function of TAT has been established by previous studies. Richner (1938) and Hanhart (1947) described an oculocutaneous syndrome characterized by herpetiform corneal ulcers and painful punctate keratoses of digits, palms, and soles. Richner (1938) described skin lesions in brother and sister. Only the brother had corneal lesions. Hanhart (1947) reported that the parents of his patient were second cousins. Hanhart (1947) also described associated severe mental and somatic retardation. The pedigree he reported was reproduced by Waardenburg et al. (1961). Waardenburg et al. (1961) described children of a first- cousin marriage, one with the full syndrome and one with only corneal changes. Ventura et al. (1965) described the syndrome in 2 sons of first- cousin parents. Buist (1967) referred to studies of a child with tyrosinemia and tyrosine transaminase deficiency, but normal p- hydroxyphenylpyruvic acid oxidase. Phenylalanine level was normal. Hydroxyphenylpyruvic acid was elevated in the urine. Fellman et al. (1969) reported chemical studies on the same patient. Only the mitochondrial form of tyrosine aminotransferase (TAT) was present in the liver. The soluble form of TAT (EC 2.6.1.5) was lacking. The patient had

markedly elevated tyrosine blood levels and an increase in urinary p- hydroxyphenylpyruvate and p- hydroxyphenyl-lactate. A regulator gene for tyrosine transaminase is X-linked (OMIM Ref. No. 314350). Goldsmith et al. (1973) demonstrated tyrosinemia and phenylaceticacidemia in this disorder. Their patient was the 14- year- old son of consanguineous Italian parents. The urine contained excessive P- hydroxyphenylactic acid. Urinary P- hydroxyphenylpyruvic acid was normal. Clinical and biochemical improvement accompanied low phenylalanine- low tyrosine diet. They suggested that soluble TAT may be deficient. Mitochondrial tyrosine transaminase is normal. Beinfang et al. (1976) described the ophthalmologic findings in the patient reported by Goldsmith et al. (1973). This condition is also known as tyrosinemia with palmar and plantar keratosis and keratitis. Garibaldi et al. (1977) observed this disorder, which they called oculocutaneous tyrosinosis, in a 42- month- old girl and her maternal aunt. The parents of the maternal aunt were first cousins. They emphasized the importance of early diagnosis in order to prevent mental retardation by means of a diet restricted in phenylalanine and tyrosine. Hunziker (1980) reported brother and sister with unusually late onset (about age

15). Their patients' skin lesions were improved with a diet restricted in phenylalanine and tyrosine. In a consanguineous sibship, Rehak et al. (1981) reported 4 cases of Richner- Hanhart syndrome. Cutaneous manifestations were typical but the eyes were not involved, suggesting heterogeneity in this disorder. Bohnert and Anton- Lamprecht (1982) reported unique ultrastructural changes: thickening of the granular layer and increased synthesis of tonofibrils and keratohyalin; in the ridged palmar or plantar skin, large numbers of microtubules and unusually tight packing of tonofibrillar masses, which contained tubular channels or inclusions of microtubules. The authors assumed that increased cohesion and tight packing of tonofilaments prevent normal spreading of keratohyalin and result in its globular appearance. Further, they suggested that excessive amounts of intracellular tyrosine enhance crosslinks between aggregated tonofilaments. In an Ashkenazi Jewish family, Chitayat et al. (1992) observed 2 adult sibs, offspring of a first- cousin marriage, with persistent hypertyrosinemia. A curious feature was that the affected female sib, aged 41 years, had hypertyrosinemia and characteristic oculocutaneous signs; the brother, aged 39 years, had hypertyrosinemia but no ocu-

locutaneous disease. Both sibs had 2 children; none had signs of metabolic fetopathy.

[31237]

[31238] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31239] Goldsmith, L. A.; Kang, E. S.; Bienfang, D. C.; Jimbow, K.; Gerald, P. S.; Baden, H. P. : Tyrosinemia with plantar and palmar keratosis and keratitis. J. Pediat. 83: 798- 805, 1973. ; and

[31240] Hunziker, N. : Richner- Hanhart syndrome and tyrosinemia type II. Dermatologica 160: 180- 189, 1980.

[31241] Further studies establishing the function and utilities of TAT are found in John Hopkins OMIM database record ID 276600, and in cited publications listed in Table 5, which are hereby incorporated by reference.Tbc1 domain family, member 5 (TBC1D5, Accession NP_055559.1) is another GAM189 target gene, herein designated TARGET GENE. TBC1D5 BINDING SITE1 and TBC1D5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TBC1D5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of TBC1D5 BINDING SITE1 and TBC1D5 BINDING SITE2, designated SEQ ID:14859 and SEQ ID:16449 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31242] Another function of GAM189 is therefore inhibition of Tbc1 domain family, member 5 (TBC1D5, Accession NP_055559.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBC1D5.

[31243] T-box 3 (ulnar mammary syndrome) (TBX3, Accession NP_005987.2) is another GAM189 target gene, herein designated TARGET GENE. TBX3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TBX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX3 BINDING SITE, designated SEQ ID:19690, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31244] Another function of GAM189 is therefore inhibition of T-box 3 (ulnar mammary syndrome) (TBX3, Accession

NP_005987.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX3.

[31245] T-box 3 (ulnar mammary syndrome) (TBX3, Accession NP_057653.2) is another GAM189 target gene, herein designated TARGET GENE. TBX3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TBX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX3 BINDING SITE, designated SEQ ID:19690, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31246] Another function of GAM189 is therefore inhibition of T-box 3 (ulnar mammary syndrome) (TBX3, Accession NP_057653.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX3.

[31247] Transcription factor 2, hepatic; lf-b3; variant hepatic nuclear factor (TCF2, Accession NP_006472.1) is another GAM189 target gene, herein designated TARGET GENE. TCF2 BINDING SITE is a target binding site found in the 3`

untranslated region of multiple transcripts of mRNA encoded by TCF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCF2 BINDING SITE, designated SEQ ID:625, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31248] Another function of GAM189 is therefore inhibition of Transcription factor 2, hepatic; lf-b3; variant hepatic nuclear factor (TCF2, Accession NP_006472.1), a gene which probably binds to the inverted palindrome 5'- gttaatnattaac- 3'. and therefore is associated with Maturity- onset diabetes of the young type 5 (mody5), familial hypoplastic glomerulocystic kidney disease (gckd). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Maturity- onset diabetes of the young type 5 (mody5), familial hypoplastic glomerulocystic kidney disease (gckd), and of other diseases and clinical conditions associated with TCF2.

[31249] The function of TCF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.T-cell leukemia/lymphoma 6 (TCL6, Acces-

sion NP_065575.1) is another GAM189 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:17450, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31250] Another function of GAM189 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065575.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[31251] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_036600.2) is another GAM189 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6

BINDING SITE, designated SEQ ID:17450, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31252] Another function of GAM189 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_036600.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[31253] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) is another GAM189 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:17450, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31254] Another function of GAM189 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with TCL6.

[31255] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) is another GAM189 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:17450, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31256] Another function of GAM189 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[31257] Teratocarcinoma-derived growth factor 1 (TDGF1, Accession NP_003203.1) is another GAM189 target gene, herein designated TARGET GENE. TDGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TDGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TDGF1 BINDING SITE, designated SEQ ID:8563, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31258] Another function of GAM189 is therefore inhibition of Teratocarcinoma-derived growth factor 1 (TDGF1, Accession NP_003203.1), a gene which can play a role in the determination of the epiblastic cells that subsequently give rise to the mesoderm. and therefore may be associated with Forebrain defects. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Forebrain defects, and of other diseases and clinical conditions associated with TDGF1.

[31259] The function of TDGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.TERA (Accession NP_067061.1) is another GAM189 target gene, herein designated TARGET GENE. TERA BINDING SITE1 and TERA BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TERA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of TERA BINDING SITE1 and TERA BINDING SITE2, designated SEQ ID:17755 and SEQ ID:14491 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31260] Another function of GAM189 is therefore inhibition of TERA (Accession NP_067061.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TERA.

[31261] Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_059523.1) is another GAM189 target gene, herein designated TARGET GENE. TERF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TERF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TERF1 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31262] Another function of GAM189 is therefore inhibition of Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_059523.1), a gene which negatively

regulates telomere length, involves in regulation of the mitotic spindle. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TERF1.

[31263] The function of TERF1 has been established by previous studies. Human chromosomes carry at their termini long arrays of double- stranded hexamers (OMIM Ref. No. TTAGGG) that are maintained by the enzyme telomerase (OMIM Ref. No. 187270). Chong et al. (1995) noted that telomeric DNA is thought to form a protective nucleoprotein cap through its association with telomere- specific proteins; also see review by Zakian (1995). Because the loss of telomere function can induce cell cycle arrest and genome instability, the telomeric complex is probably required in all human cells. Changes in the structure and function of human telomeres are thought to play a role in malignant transformation and cellular senescence. Protein components of the telomeric complex had been identified in ciliates and yeast, but not in vertebrate systems. Quests for vertebrate telomeric proteins had yielded a single candidate that could potentially bind along the length of the telomeric TTAGGG repeat array. This protein, called TRF (telomeric repeat- binding factor) by Chong et al. (1995),

was shown by the authors to associate with double-stranded TTAGGG repeat arrays in vitro. TRF displays strong specificity for vertebrate telomere DNA. Human TRF activity is detectable in HeLa cell nuclear extracts on the basis of its ability to alter the mobility of double-stranded DNA fragments containing the sequence (OMIM Ref. No. TTAGGG)12. Using this assay, Chong et al. (1995) purified HeLa TRF to near homogeneity. Three independent preparations of purified TRF contained a protein in the 60- kD apparent molecular mass range, which copurified with TRF activity over a column containing double-stranded TTAGGG repeats. Amino acid sequences revealed sequence identity to an anonymous partial cDNA in the GenBank database. On the basis of this nucleotide sequence, cDNAs were isolated from a HeLa cell library, sequenced, and found to contain an open reading frame encoding all sequence peptides. The cDNA hybridized 2 mRNAs of approximately 1.8 and 3.0 kb that are expressed in a variety of human tissues. The cDNA derived from the larger mRNA revealed an open reading frame encoding a 439- amino acid protein. In vitro transcription and translation of the cloned cDNA produced a protein of the same size as purified HeLa TRF. Comparison with the sequence

information in the databases indicated that human TRF is a novel protein with 3 previously recognized sequence motifs. There is one DNA- binding repeat resembling that of MYB (OMIM Ref. No. 189990) and an N- terminal acidic domain. Immunofluorescent labeling showed that TRF specifically colocalizes with telomeric DNA in human metaphase cells and is located at chromosome ends during metaphase. Chong et al. (1995) stated that the presence of TRF along the telomeric TTAGGG repeat array demonstrates that human telomeres form a specialized nuclear protein complex. In yeast, Marcand et al. (1997) demonstrated a protein- counting mechanism for regulation of the length of telomeres. This mechanism involves the telomere repeat- binding protein Rap1p. Because the structural and functional properties of telomeres appear to be highly conserved, Marcand et al. (1997) suggested that their findings may be relevant to telomere length regulation in humans, which has been associated with aging and cancer. Okabe et al. (2000) investigated cellular factors required for telomere formation using the frequency of telomere seeding as an index and identified TRF1 as an essential transacting factor. The exogenous telomere repeat induced telomere formation at a fre-

quency determined by the availability of TRF1, even in telomerase- negative cells. The authors concluded that TRF1 has a novel physiologic significance distinct from its role as a regulator of telomere length in the endogenous chromosome.

[31264]

[31265] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31266] Chong, L.; van Steensel, B.; Broccoli, D.; Erdjument- Bromage, H.; Hanish, J.; Tempst, P.; de Lange, T. : A human telomeric protein. Science 270: 1663- 1667, 1995. ; and

[31267] Okabe, J.; Eguchi, A.; Masago, A.; Hayakawa, T.; Nakanishi, M. : TRF1 is a critical trans- acting factor required for de novo telomere formation in human cells. Hum. Molec. Genet. 9: 263.

[31268] Further studies establishing the function and utilities of TERF1 are found in John Hopkins OMIM database record ID 600951, and in cited publications listed in Table 5, which are hereby incorporated by reference.Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_003209.1) is another GAM189 target gene, herein designated TARGET GENE. TERF1 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TERF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TERF1 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31269] Another function of GAM189 is therefore inhibition of Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_003209.1), a gene which negatively regulates telomere length, involves in regulation of the mitotic spindle. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TERF1.

[31270] The function of TERF1 has been established by previous studies. Human chromosomes carry at their termini long arrays of double- stranded hexamers (OMIM Ref. No. TTAGGG) that are maintained by the enzyme telomerase (OMIM Ref. No. 187270). Chong et al. (1995) noted that telomeric DNA is thought to form a protective nucleoprotein cap through its association with telomere- specific proteins; also see review by Zakian (1995). Because the

loss of telomere function can induce cell cycle arrest and genome instability, the telomeric complex is probably required in all human cells. Changes in the structure and function of human telomeres are thought to play a role in malignant transformation and cellular senescence. Protein components of the telomeric complex had been identified in ciliates and yeast, but not in vertebrate systems. The authors concluded that TRF1 has a novel physiologic significance distinct from its role as a regulator of telomere length in the endogenous chromosome.

[31271]

[31272] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31273] Chong, L.; van Steensel, B.; Broccoli, D.; Erdjument- Bromage, H.; Hanish, J.; Tempst, P.; de Lange, T. : A human telomeric protein. Science 270: 1663- 1667, 1995. ; and

[31274] Okabe, J.; Eguchi, A.; Masago, A.; Hayakawa, T.; Nakanishi, M. : TRF1 is a critical trans- acting factor required for de novo telomere formation in human cells. Hum. Molec. Genet. 9: 263.

[31275] Further studies establishing the function and utilities of TERF1 are found in John Hopkins OMIM database record ID 600951, and in cited publications listed in Table 5, which are hereby incorporated by reference.Telomeric repeat binding factor 2 (TERF2, Accession NP_005643.1) is another GAM189 target gene, herein designated TARGET GENE. TERF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TERF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TERF2 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31276] Another function of GAM189 is therefore inhibition of Telomeric repeat binding factor 2 (TERF2, Accession NP_005643.1), a gene which plays a key role in the protective activity of telomeres. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with TERF2.

[31277] The function of TERF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM133.2.Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) is another GAM189 target gene, herein designated TARGET GENE. TGIF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGIF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TGIF2 BINDING SITE, designated SEQ ID:6881, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31278] Another function of GAM189 is therefore inhibition of Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TGIF2.

[31279] Tigger transposable element derived 6 (TIGD6, Accession NP_112215.1) is another GAM189 target gene, herein designated TARGET GENE. TIGD6 BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by TIGD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIGD6 BINDING SITE, designated SEQ ID:4933, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31280] Another function of GAM189 is therefore inhibition of Tigger transposable element derived 6 (TIGD6, Accession NP_112215.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIGD6.

[31281] TIM50L (Accession XP_053074.2) is another GAM189 target gene, herein designated TARGET GENE. TIM50L BINDING SITE1 and TIM50L BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TIM50L, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIM50L BINDING SITE1 and TIM50L BINDING SITE2, designated SEQ ID:5989 and SEQ ID:10157 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31282] Another function of GAM189 is therefore inhibition of TIM50L (Accession XP_053074.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIM50L.

[31283] Tousled-like kinase 1 (TLK1, Accession NP_036422.2) is another GAM189 target gene, herein designated TARGET GENE. TLK1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TLK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLK1 BINDING SITE, designated SEQ ID:6551, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31284] Another function of GAM189 is therefore inhibition of Tousled-like kinase 1 (TLK1, Accession NP_036422.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLK1.

[31285] Toll-like receptor 5 (TLR5, Accession NP_003259.2) is another GAM189 target gene, herein designated TARGET GENE. TLR5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TLR5,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLR5 BINDING SITE, designated SEQ ID:16229, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31286] Another function of GAM189 is therefore inhibition of Toll-like receptor 5 (TLR5, Accession NP_003259.2), a gene which participates in the innate immune response to bacterial flagellins. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLR5.

[31287] The function of TLR5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Transmembrane, cochlear expressed, 1 (TMC1, Accession NP_619636.2) is another GAM189 target gene, herein designated TARGET GENE. TMC1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TMC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMC1 BIND-

ING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31288] Another function of GAM189 is therefore inhibition of Transmembrane, cochlear expressed, 1 (TMC1, Accession NP_619636.2), a gene which is required for normal function of cochlear hair cells and therefore may be associated with Autosomal recessive nonsyndromic neurosensory deafness and autosomal dominant nonsyndromic sensorineural hearing loss . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Autosomal recessive nonsyndromic neurosensory deafness and autosomal dominant nonsyndromic sensorineural hearing loss ., and of other diseases and clinical conditions associated with TMC1.

[31289] The function of TMC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.TMEM14A (Accession NP_054770.1) is another GAM189 target gene, herein designated TARGET GENE. TMEM14A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TMEM14A, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMEM14A BINDING SITE, designated SEQ ID:5271, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31290] Another function of GAM189 is therefore inhibition of TMEM14A (Accession NP_054770.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM14A.

[31291] Transmembrane protease, serine 3 (TMPRSS3, Accession NP_076927.1) is another GAM189 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE, designated SEQ ID:6625, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31292] Another function of GAM189 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession

NP_076927.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[31293] Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115777.1) is another GAM189 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE, designated SEQ ID:6625, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31294] Another function of GAM189 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115777.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[31295] Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115780.1) is another GAM189 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by TMPRSS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE, designated SEQ ID:6625, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31296] Another function of GAM189 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115780.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[31297] Tumor necrosis factor, alpha-induced protein 2 (TNFAIP2, Accession NP_006282.2) is another GAM189 target gene, herein designated TARGET GENE. TNFAIP2 BINDING SITE1 and TNFAIP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TNFAIP2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFAIP2 BINDING SITE1 and TNFAIP2 BINDING SITE2, designated SEQ ID:13948 and SEQ ID:17621 respectively, to the nucleotide sequence of GAM189 RNA,

herein designated GAM RNA, also designated SEQ ID:246.

[31298] Another function of GAM189 is therefore inhibition of Tumor necrosis factor, alpha-induced protein 2 (TNFAIP2, Accession NP_006282.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFAIP2.

[31299] Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_003833.3) is another GAM189 target gene, herein designated TARGET GENE. TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF10B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2, designated SEQ ID:4398 and SEQ ID:4398 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31300] Another function of GAM189 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_003833.3), a gene which forms complex that induces apoptosis. and therefore may be as-

sociated with Squamous cell carcinoma . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Squamous cell carcinoma ., and of other diseases and clinical conditions associated with TNFRSF10B.

[31301] The function of TNFRSF10B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_671716.1) is another GAM189 target gene, herein designated TARGET GENE. TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TNFRSF10B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF10B BINDING SITE1 and TNFRSF10B BINDING SITE2, designated SEQ ID:15107 and SEQ ID:15107 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31302] Another function of GAM189 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 10b

(TNFRSF10B, Accession NP_671716.1), a gene which forms complex that induces apoptosis. and therefore may be associated with Squamous cell carcinoma . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Squamous cell carcinoma ., and of other diseases and clinical conditions associated with TNFRSF10B.

[31303] The function of TNFRSF10B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tumor necrosis factor receptor superfamily, member 11a, activator of nfkb (TNFRSF11A, Accession NP_003830.1) is another GAM189 target gene, herein designated TARGET GENE. TNFRSF11A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF11A BINDING SITE, designated SEQ ID:2200, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31304] Another function of GAM189 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 11a,

activator of nfkb (TNFRSF11A, Accession NP_003830.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF11A.

[31305] Tumor necrosis factor receptor superfamily, member 21 (TNFRSF21, Accession NP_055267.1) is another GAM189 target gene, herein designated TARGET GENE. TNFRSF21 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF21 BINDING SITE, designated SEQ ID:16759, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31306] Another function of GAM189 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 21 (TNFRSF21, Accession NP_055267.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF21.

[31307] Tumor necrosis factor receptor superfamily, member 9 (TNFRSF9, Accession NP_001552.2) is another GAM189

target gene, herein designated TARGET GENE. TNFRSF9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF9 BINDING SITE, designated SEQ ID:13464, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31308] Another function of GAM189 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 9 (TNFRSF9, Accession NP_001552.2), a gene which inhibits proliferation of activated T lymphocytes. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF9.

[31309] The function of TNFRSF9 has been established by previous studies. Schwarz et al. (1996) reported that ILA inhibits proliferation of activated T lymphocytes and induces programmed cell death. Loo et al. (1997) reported that, unlike its mouse counterpart, human 4- 1BB binds only to its ligand, TNFSF9, and not to extracellular matrix proteins such as laminin (see OMIM Ref. No. 150240). The authors

attributed this species distinction to sequence differences in the N- terminal laminin- homologous domain of human 4- 1BB.

[31310]

[31311] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31312] Loo, D. T.; Chalupny, N. J.; Bajorath, J.; Shuford, W. W.; Mittler, R. S.; Aruffo, A. : Analysis of 4- 1BBL and laminin binding to murine 4- 1BB, a member of the tumor necrosis factor receptor superfamily, and comparison with human 4- 1BB. J. Biol. Chem. 272: 6448- 6456, 1997. ; and

[31313] Schwarz, H.; Arden, K.; Lotz, M. : CD137, a member of the tumor necrosis factor receptor family, is located on chromosome 1p36, in a cluster of related genes, and colocalizes with sever.

[31314] Further studies establishing the function and utilities of TNFRSF9 are found in John Hopkins OMIM database record ID 602250, and in cited publications listed in Table 5, which are hereby incorporated by reference.Tensin (TNS, Accession NP_072174.2) is another GAM189 target gene, herein designated TARGET GENE. TNS BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by TNS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNS BINDING SITE, designated SEQ ID:8787, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31315] Another function of GAM189 is therefore inhibition of Tensin (TNS, Accession NP_072174.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNS.

[31316] TOLLIP (Accession NP_061882.2) is another GAM189 target gene, herein designated TARGET GENE. TOLLIP BINDING SITE1 and TOLLIP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TOLLIP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOLLIP BINDING SITE1 and TOLLIP BINDING SITE2, designated SEQ ID:13694 and SEQ ID:3306 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31317] Another function of GAM189 is therefore inhibition of TOLLIP (Accession NP_061882.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOLLIP.

[31318] Topoisomerase (dna) iii beta (TOP3B, Accession NP_003926.1) is another GAM189 target gene, herein designated TARGET GENE. TOP3B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TOP3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOP3B BINDING SITE, designated SEQ ID:4495, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31319] Another function of GAM189 is therefore inhibition of Topoisomerase (dna) iii beta (TOP3B, Accession NP_003926.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOP3B.

[31320] Torsin family 1, member b (torsin b) (TOR1B, Accession NP_055321.1) is another GAM189 target gene, herein designated TARGET GENE. TOR1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by TOR1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOR1B BINDING SITE, designated SEQ ID:14221, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31321] Another function of GAM189 is therefore inhibition of Torsin family 1, member b (torsin b) (TOR1B, Accession NP_055321.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOR1B.

[31322] TOSO (Accession NP_005440.1) is another GAM189 target gene, herein designated TARGET GENE. TOSO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TOSO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOSO BINDING SITE, designated SEQ ID:5682, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31323] Another function of GAM189 is therefore inhibition of

TOSO (Accession NP_005440.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOSO.

[31324] Tumor protein p53 (li-fraumeni syndrome) (TP53, Accession NP_000537.2) is another GAM189 target gene, herein designated TARGET GENE. TP53 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TP53, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53 BINDING SITE, designated SEQ ID:4654, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31325] Another function of GAM189 is therefore inhibition of Tumor protein p53 (li-fraumeni syndrome) (TP53, Accession NP_000537.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TP53.

[31326] TP53I11 (Accession XP_029347.6) is another GAM189 target gene, herein designated TARGET GENE. TP53I11 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TP53I11, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53I11 BINDING SITE, designated SEQ ID:14987, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31327] Another function of GAM189 is therefore inhibition of TP53I11 (Accession XP_029347.6) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TP53I11.

[31328] Thiopurine s-methyltransferase (TPMT, Accession NP_000358.1) is another GAM189 target gene, herein designated TARGET GENE. TPMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TPMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPMT BINDING SITE, designated SEQ ID:19670, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31329] Another function of GAM189 is therefore inhibition of

Thiopurine s-methyltransferase (TPMT, Accession NP_000358.1), a gene which catalyzes the s- methylation of thiopurine drugs such as 6- mercaptopurine. and therefore may be associated with Thiopurine s- methyl-transferase polymorphism. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Thiopurine s- methyltransferase polymorphism, and of other diseases and clinical conditions associated with TPMT.

[31330] The function of TPMT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Tnf receptor-associated factor 5 (TRAF5, Accession NP_004610.1) is another GAM189 target gene, herein designated TARGET GENE. TRAF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRAF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAF5 BINDING SITE, designated SEQ ID:7045, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31331] Another function of GAM189 is therefore inhibition of Tnf receptor-associated factor 5 (TRAF5, Accession NP_004610.1), a gene which Member of a family of proteins that interact with TNF receptors; binds the lymphotoxin beta receptor (LTBR). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF5.

[31332] The function of TRAF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Tnf receptor-associated factor 5 (TRAF5, Accession NP_665702.1) is another GAM189 target gene, herein designated TARGET GENE. TRAF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRAF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAF5 BINDING SITE, designated SEQ ID:7045, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31333] Another function of GAM189 is therefore inhibition of Tnf receptor-associated factor 5 (TRAF5, Accession

NP_665702.1), a gene which Member of a family of proteins that interact with TNF receptors; binds the lymphotoxin beta receptor (LTBR). Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF5.

[31334] The function of TRAF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Tripartite motif-containing 16 (TRIM16, Accession NP_006461.2) is another GAM189 target gene, herein designated TARGET GENE. TRIM16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIM16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM16 BINDING SITE, designated SEQ ID:4601, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31335] Another function of GAM189 is therefore inhibition of Tripartite motif-containing 16 (TRIM16, Accession NP_006461.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with TRIM16.

[31336] Tripartite motif-containing 5 (TRIM5, Accession NP_149023.1) is another GAM189 target gene, herein designated TARGET GENE. TRIM5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRIM5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM5 BINDING SITE, designated SEQ ID:5879, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31337] Another function of GAM189 is therefore inhibition of Tripartite motif-containing 5 (TRIM5, Accession NP_149023.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM5.

[31338] Tripartite motif-containing 6 (TRIM6, Accession NP_477514.1) is another GAM189 target gene, herein designated TARGET GENE. TRIM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM6 BINDING SITE, designated SEQ ID:13572, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31339] Another function of GAM189 is therefore inhibition of Tripartite motif-containing 6 (TRIM6, Accession NP_477514.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM6.

[31340] TRIP-Br2 (Accession NP_055570.1) is another GAM189 target gene, herein designated TARGET GENE. TRIP-Br2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIP-Br2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIP-Br2 BINDING SITE, designated SEQ ID:19574, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31341] Another function of GAM189 is therefore inhibition of TRIP-Br2 (Accession NP_055570.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with TRIP-Br2.

[31342] Transient receptor potential cation channel, subfamily m, member 6 (TRPM6, Accession NP_060132.3) is another GAM189 target gene, herein designated TARGET GENE. TRPM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM6 BINDING SITE, designated SEQ ID:18177, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31343] Another function of GAM189 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 6 (TRPM6, Accession NP_060132.3), a gene which contains a predicted ion channel domain and a protein kinase domain. and therefore is associated with Hypomagnesemia with secondary hypocalcemia. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Hypomagnesemia with secondary hypocalcemia, and of other diseases and clinical conditions associated with TRPM6.

[31344] The function of TRPM6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1) is another GAM189 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:16980 and SEQ ID:19833 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31345] Another function of GAM189 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[31346] The function of TRPV1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542437.1) is another GAM189 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:16980 and SEQ ID:16980 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31347] Another function of GAM189 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542437.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[31348] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1) is another GAM189 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:19833 and SEQ ID:19833 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31349] Another function of GAM189 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[31350] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542435.1) is another GAM189 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:19833 and SEQ ID:16980 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31351] Another function of GAM189 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542435.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[31352] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Tuberous sclerosis 1 (TSC1, Accession

NP_000359.1) is another GAM189 target gene, herein designated TARGET GENE. TSC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TSC1 BINDING SITE, designated SEQ ID:15082, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31353] Another function of GAM189 is therefore inhibition of Tuberous sclerosis 1 (TSC1, Accession NP_000359.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSC1.

[31354] Tspy-like (TSPYL, Accession XP_166325.1) is another GAM189 target gene, herein designated TARGET GENE. TSPYL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TSPYL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TSPYL BINDING SITE, designated SEQ ID:15042, to the nu-

cleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31355] Another function of GAM189 is therefore inhibition of Tspy-like (TSPYL, Accession XP_166325.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSPYL.

[31356] TTY7 (Accession NP_114132.1) is another GAM189 target gene, herein designated TARGET GENE. TTY7 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TTY7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTY7 BINDING SITE, designated SEQ ID:1016, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31357] Another function of GAM189 is therefore inhibition of TTY7 (Accession NP_114132.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTY7.

[31358] TU12B1-TY (Accession NP_057659.1) is another GAM189 target gene, herein designated TARGET GENE. TU12B1-TY

BINDING SITE1 through TU12B1-TY BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by TU12B1-TY, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TU12B1-TY BINDING SITE1 through TU12B1-TY BINDING SITE3, designated SEQ ID:4256, SEQ ID:16036 and SEQ ID:15780 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31359] Another function of GAM189 is therefore inhibition of TU12B1-TY (Accession NP_057659.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TU12B1-TY.

[31360] TUCAN (Accession NP_055774.1) is another GAM189 target gene, herein designated TARGET GENE. TUCAN BINDING SITE1 and TUCAN BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TUCAN, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUCAN BINDING SITE1 and TUCAN

BINDING SITE2, designated SEQ ID:9530 and SEQ ID:7106 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31361] Another function of GAM189 is therefore inhibition of TUCAN (Accession NP_055774.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUCAN.

[31362] TXL-2 (Accession NP_835231.1) is another GAM189 target gene, herein designated TARGET GENE. TXL-2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TXL-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TXL-2 BINDING SITE, designated SEQ ID:15381, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31363] Another function of GAM189 is therefore inhibition of TXL-2 (Accession NP_835231.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TXL-2.

[31364] Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) is another GAM189 target gene, herein designated TARGET

GENE. TXNL2 BINDING SITE1 and TXNL2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TXNL2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TXNL2 BINDING SITE1 and TXNL2 BINDING SITE2, designated SEQ ID:19232 and SEQ ID:9147 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31365] Another function of GAM189 is therefore inhibition of Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TXNL2.

[31366] U1SNRNPBP (Accession NP_851034.1) is another GAM189 target gene, herein designated TARGET GENE. U1SNRNPBP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of U1SNRNPBP BINDING SITE, desig-

nated SEQ ID:9590, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31367] Another function of GAM189 is therefore inhibition of U1SNRNPBP (Accession NP_851034.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with U1SNRNPBP.

[31368] U1SNRNPBP (Accession NP_851030.1) is another GAM189 target gene, herein designated TARGET GENE. U1SNRNPBP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of U1SNRNPBP BINDING SITE, designated SEQ ID:9590, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31369] Another function of GAM189 is therefore inhibition of U1SNRNPBP (Accession NP_851030.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

U1SNRNPBP.

[31370] U1SNRNPBP (Accession NP_008951.1) is another GAM189 target gene, herein designated TARGET GENE. U1SNRNPBP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of U1SNRNPBP BINDING SITE, designated SEQ ID:9590, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31371] Another function of GAM189 is therefore inhibition of U1SNRNPBP (Accession NP_008951.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with U1SNRNPBP.

[31372] UCK1 (Accession NP_113620.1) is another GAM189 target gene, herein designated TARGET GENE. UCK1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UCK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of UCK1 BINDING SITE, designated SEQ ID:11791, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31373] Another function of GAM189 is therefore inhibition of UCK1 (Accession NP_113620.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UCK1.

[31374] Udp-glucose dehydrogenase (UGDH, Accession NP_003350.1) is another GAM189 target gene, herein designated TARGET GENE. UGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGDH BINDING SITE, designated SEQ ID:7909, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31375] Another function of GAM189 is therefore inhibition of Udp-glucose dehydrogenase (UGDH, Accession NP_003350.1), a gene which is an UDP- glucose dehydrogenase. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical con-

ditions associated with UGDH.

[31376] The function of UGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Udp glycosyltransferase 1 family, polypeptide a1 (UGT1A1, Accession NP_000454.1) is another GAM189 target gene, herein designated TARGET GENE. UGT1A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A1 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31377] Another function of GAM189 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a1 (UGT1A1, Accession NP_000454.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A1.

[31378] Udp glycosyltransferase 1 family, polypeptide a10 (UGT1A10, Accession NP_061948.1) is another GAM189 target gene, herein designated TARGET GENE. UGT1A10

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A10 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31379] Another function of GAM189 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a10 (UGT1A10, Accession NP_061948.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A10.

[31380] Udp glycosyltransferase 1 family, polypeptide a4 (UGT1A4, Accession NP_009051.1) is another GAM189 target gene, herein designated TARGET GENE. UGT1A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A4 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM189 RNA, herein designated

GAM RNA, also designated SEQ ID:246.

[31381] Another function of GAM189 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a4 (UGT1A4, Accession NP_009051.1), a gene which is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. and therefore may be associated with Gilbert's syndrome, crigler- najjar. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Gilbert's syndrome, crigler- najjar, and of other diseases and clinical conditions associated with UGT1A4.

[31382] The function of UGT1A4 has been established by previous studies. By screening a liver cDNA library with a probe to a conserved transferase C- terminal sequence, followed by 5- prime RACE, Ritter et al. (1991) obtained cDNAs encoding UGT1A1 and UGT1A4, which they termed HUGBR1 and HUGBR2, respectively. The deduced 534- amino acid UGT1A4 protein shares 66% sequence similarity with UGT1A1 in the N terminus, which contains potential N-linked glycosylation sites, and complete identity after codon 287. Northern blot analysis revealed expression of a 2.6- kb transcript in liver. Unlike UGT1A1, expression of UGT1A4 is normal in type I Crigler- Najjar syndrome

(OMIM Ref. No. 218800). Functional analysis showed that UGT1A4 has glucuronidating activity although, in a review of the UGTs, Tukey and Strassburg (2000) found that UGT1A4 activity with bilirubin is rather modest compared to that of UGT1A1. UGT1A4 is relatively active with amines, steroids, and sapogenins. By Northern blot analysis, Ritter et al. (1992) determined that UGT1A4, then termed UGT1D, is expressed at lower levels than UGT1A1 in liver. By Southern blot analysis, Ritter et al. (1992) determined that all of the UGT1A genes map to the same locus on chromosome 2.

[31383]

[31384] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31385] Ritter, J. K.; Chen, F.; Sheen, Y. Y.; Tran, H. M.; Kimura, S.; Yeatman, M. T.; Owens, I. S. : A novel complex locus UGT1 encodes human bilirubin, phenol, and other UDP- glucuronosyltransferase isozymes with identical carboxyl termini. J. Biol. Chem. 267: 3257- 3261, 1992. ; and

[31386] Tukey, R. H.; Strassburg, C. P. : Human UDP- glucuronosyltransferases: metabolism, expression, and disease. Annu. Rev. Pharm. Toxicol. 40: 581- 616, 2000.

[31387] Further studies establishing the function and utilities of UGT1A4 are found in John Hopkins OMIM database record ID 606429, and in cited publications listed in Table 5, which are hereby incorporated by reference.Udp glycosyltransferase 1 family, polypeptide a6 (UGT1A6, Accession NP_001063.1) is another GAM189 target gene, herein designated TARGET GENE. UGT1A6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A6 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31388] Another function of GAM189 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a6 (UGT1A6, Accession NP_001063.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A6.

[31389] Udp glycosyltransferase 1 family, polypeptide a8 (UGT1A8, Accession NP_061949.3) is another GAM189 target gene, herein designated TARGET GENE. UGT1A8

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A8 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31390] Another function of GAM189 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a8 (UGT1A8, Accession NP_061949.3), a gene which is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A8.

[31391] The function of UGT1A8 has been established by previous studies. By screening colon cDNA libraries with UGT- specific primers, Mojarrabi and Mackenzie (1998) detected and sequenced UGT1A1, UGT1A3 (OMIM Ref. No. 606428), UGT1A4 (OMIM Ref. No. 606429), UGT1A6 (OMIM Ref. No. 606431), UGT1A8, UGT1A9 (OMIM Ref. No. 606434), and UGT1A10 (OMIM Ref. No. 606435). Of

these forms, only UGT1A8 and UGT1A10 are expressed predominantly in colon; the others are found in liver and other extrahepatic tissues. Sequence analysis predicted that the catalytically active form of UGT1A8 has lys132, thr202, and met212, instead of arg, ala, and leu, respectively, at these positions. Western blot analysis showed expression of a 56- kD protein that is most active towards hydroxylated metabolites of carcinogenic coumarins. RT-PCR analysis revealed expression in colon but not in liver, kidney, and several other tissues. Mojarrabi and Mackenzie (1998) suggested that UGT1A8 may be of particular importance in the glucuronidation of drugs given orally or as suppositories as well as in the elimination of ingested dietary mutagens and toxins. No 2 tissues contain the same identical complement of UGT proteins. This observation suggests that the functional properties of the proteins may have evolved to meet the unique challenges necessary for glucuronidation in different tissues. This is best represented by the extrahepatic expression of UGT1A7, UGT1A8, and UGT1A10, all 3 of which are found in different tissues of the intestinal tract. With the high concentration of UGTs in the intestinal tract, these proteins may play an important role in first- pass

metabolism, and thus alterations in function resulting from pharmacogenetic differences may influence systemic drug levels and therapeutic outcome. Huang et al. (2002) identified 4 genotypes at the UGT1A8 locus in 69 individuals. Their results indicated that the functional properties of the proteins encoded by UGT1A8*1 and UGT1A8*2 differ significantly in catalytic potential from UGT1A8*3.

[31392]

[31393] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31394] Huang, Y.- H.; Galijatovic, A.; Nguyen, N.; Geske, D.; Beaton, D.; Green, J.; Green, M.; Peters, W. H.; Tukey, R. H. : Identification and functional characterization of UDP-glucuronosyltransferases UGT1A8*1, UGT1A8*2 and UGT1A8*3. Pharmacogenetics 12: 287- 297, 2002. ; and

[31395] Mojarrabi, B.; Mackenzie, P. I. : Characterization of two UDP glucuronosyltransferases that are predominantly expressed in human colon. Biochem. Biophys. Res. Commun. 247: 704- 709, 199.

[31396] Further studies establishing the function and utilities of UGT1A8 are found in John Hopkins OMIM database record ID 606433, and in cited publications listed in Table 5,

which are hereby incorporated by reference.Udp glycosyltransferase 1 family, polypeptide a9 (UGT1A9, Accession NP_066307.1) is another GAM189 target gene, herein designated TARGET GENE. UGT1A9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A9 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31397] Another function of GAM189 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a9 (UGT1A9, Accession NP_066307.1), a gene which is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A9.

[31398] The function of UGT1A9 has been established by previous studies. By screening a liver cDNA library with a UGT1A6 (OMIM Ref. No. 606431) probe, Wooster et al. (1991) iso-

lated a cDNA encoding UGT1A9, which they termed HLUGP4. The deduced 531- amino acid protein shares 67% overall sequence identity with UGT1A1 but only 38% in the N terminus. Western blot analysis showed expression of a 56- kD protein. Functional analysis indicated that, like UGT1A6, UGT1A9 is most active towards halogenated phenols with higher UGT1A9 activity with simple phenols. Findlay et al. (2000) reported that the predominant thyroid hormone released from the thyroid gland, T4, and the inactive rat T3 were glucuronidated by cloned expressed bilirubin UGT1A1 and also phenol UGT1A9. Results from Crigler- Najjar (see OMIM Ref. No. 218800) microsomal samples indicated that UGT1A1 was the main contributor to thyroid hormone glucuronidation in the liver, with rat T3 being the preferential substrate. In kidney microsomes, thyroid hormone glucuronidation was more complex, suggesting that more than just the UGT1A9 isoform may be involved. Bioactive T3 was not significantly glucuronidated by these isoforms and other UGTs, and sulfotransferases may have been involved.

[31399]

[31400] Full details of the abovementioned studies are described in the following publications, the disclosure of which are

hereby incorporated by reference:

[31401] Wooster, R.; Sutherland, L.; Ebner, T.; Clarke, D.; Da Cruz e Silva, O.; Burchell, B. : Cloning and stable expression of a new member of the human liver phenol/bilirubin:UDP-glucuronosyltransferase cDNA family. Biochem. J. 278: 465- 469, 1991. ; and

[31402] Findlay, K. A. B.; Kaptein, E.; Visser, T. J.; Burchell, B. : Characterization of the uridine diphosphate- glucurono-syltransferase- catalyzing thyroid hormone glucuronida-tion in man. J. C.

[31403] Further studies establishing the function and utilities of UGT1A9 are found in John Hopkins OMIM database record ID 606434, and in cited publications listed in Table 5, which are hereby incorporated by reference.Uridine monophosphate synthetase (orotate phosphoribosyl transferase and orotidine-5'-decarboxylase) (UMPS, Ac-cession NP_000364.1) is another GAM189 target gene, herein designated TARGET GENE. UMPS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UMPS, corresponding to a target bind-ing site such as BINDING SITE I, BINDING SITE II or BIND-ING SITE III of Fig.8. Table 4 illustrates the complementar-ity of the nucleotide sequences of UMPS BINDING SITE,

designated SEQ ID:2144, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31404] Another function of GAM189 is therefore inhibition of Uridine monophosphate synthetase (orotate phosphoribosyl transferase and orotidine-5'-decarboxylase) (UMPS, Accession NP_000364.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UMPS.

[31405] Unc-84 homolog a (c. elegans) (UNC84B, Accession XP_039332.1) is another GAM189 target gene, herein designated TARGET GENE. UNC84B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by UNC84B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC84B BINDING SITE, designated SEQ ID:13541, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31406] Another function of GAM189 is therefore inhibition of Unc-84 homolog a (c. elegans) (UNC84B, Accession XP_039332.1) . Accordingly, utilities of GAM189 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC84B.

[31407] Unc-84 homolog a (c. elegans) (UNC84B, Accession NP_056189.1) is another GAM189 target gene, herein designated TARGET GENE. UNC84B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by UNC84B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC84B BINDING SITE, designated SEQ ID:13541, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31408] Another function of GAM189 is therefore inhibition of Unc-84 homolog a (c. elegans) (UNC84B, Accession NP_056189.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC84B.

[31409] URG4 (Accession NP_060390.2) is another GAM189 target gene, herein designated TARGET GENE. URG4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by URG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II

or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of URG4 BINDING SITE, designated SEQ ID:6788, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31410] Another function of GAM189 is therefore inhibition of URG4 (Accession NP_060390.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with URG4.

[31411] Ubiquitin specific protease 22 (USP22, Accession XP_042698.2) is another GAM189 target gene, herein designated TARGET GENE. USP22 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by USP22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP22 BINDING SITE, designated SEQ ID:11288, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31412] Another function of GAM189 is therefore inhibition of Ubiquitin specific protease 22 (USP22, Accession XP_042698.2) . Accordingly, utilities of GAM189 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with USP22.

[31413] VDU1 (Accession NP_055832.2) is another GAM189 target gene, herein designated TARGET GENE. VDU1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VDU1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VDU1 BINDING SITE, designated SEQ ID:3187, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31414] Another function of GAM189 is therefore inhibition of VDU1 (Accession NP_055832.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VDU1.

[31415] Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) is another GAM189 target gene, herein designated TARGET GENE. VENTX2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VENTX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of VENTX2 BINDING SITE, designated SEQ ID:19331, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31416] Another function of GAM189 is therefore inhibition of Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VENTX2.

[31417] Von hippel-lindau syndrome (VHL, Accession NP_000542.1) is another GAM189 target gene, herein designated TARGET GENE. VHL BINDING SITE1 and VHL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by VHL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VHL BINDING SITE1 and VHL BINDING SITE2, designated SEQ ID:3873 and SEQ ID:8786 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31418] Another function of GAM189 is therefore inhibition of Von hippel-lindau syndrome (VHL, Accession NP_000542.1), a

gene which may control rna stability through the selective degradation of rna- bound proteins. and therefore is associated with Von hippel- lindau disease. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Von hippel- lindau disease, and of other diseases and clinical conditions associated with VHL.

[31419] The function of VHL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Vasoactive intestinal peptide receptor 2 (VIPR2, Accession NP_003373.2) is another GAM189 target gene, herein designated TARGET GENE. VIPR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VIPR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIPR2 BINDING SITE, designated SEQ ID:7754, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31420] Another function of GAM189 is therefore inhibition of Vasoactive intestinal peptide receptor 2 (VIPR2, Accession NP_003373.2) . Accordingly, utilities of GAM189 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with VIPR2.

[31421] VPS39 (Accession XP_031720.2) is another GAM189 target gene, herein designated TARGET GENE. VPS39 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VPS39, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VPS39 BINDING SITE, designated SEQ ID:18246, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31422] Another function of GAM189 is therefore inhibition of VPS39 (Accession XP_031720.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS39.

[31423] Vesicle transport through interaction with t-snares homolog 1a (yeast) (VTI1A, Accession NP_660207.1) is another GAM189 target gene, herein designated TARGET GENE. VTI1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VTI1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of VTI1A BINDING SITE, designated SEQ ID:2313, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31424] Another function of GAM189 is therefore inhibition of Vesicle transport through interaction with t-snares homolog 1a (yeast) (VTI1A, Accession NP_660207.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VTI1A.

[31425] Williams beuren syndrome chromosome region 18 (WBSCR18, Accession NP_115693.2) is another GAM189 target gene, herein designated TARGET GENE. WBSCR18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by WBSCR18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR18 BINDING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31426] Another function of GAM189 is therefore inhibition of Williams beuren syndrome chromosome region 18

(WBSCR18, Accession NP_115693.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WB-SCR18.

[31427] Wd repeat domain 6 (WDR6, Accession NP_439891.1) is another GAM189 target gene, herein designated TARGET GENE. WDR6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by WDR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR6 BINDING SITE, designated SEQ ID:12628, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31428] Another function of GAM189 is therefore inhibition of Wd repeat domain 6 (WDR6, Accession NP_439891.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR6.

[31429] Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579889.1) is another GAM189 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:9245, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31430] Another function of GAM189 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579889.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[31431] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Wingless-type mmtv integration site family, member 5a (WNT5A, Accession NP_003383.1) is another GAM189 target gene, herein designated TARGET GENE. WNT5A BINDING SITE is a target binding site found in the

5` untranslated region of mRNA encoded by WNT5A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WNT5A BINDING SITE, designated SEQ ID:10269, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31432] Another function of GAM189 is therefore inhibition of Wingless-type mmtv integration site family, member 5a (WNT5A, Accession NP_003383.1), a gene which is a ligand for members of the frizzled family of seven transmembrane receptors and is probablely a developmental protein. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WNT5A.

[31433] The function of WNT5A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1) is another GAM189 target gene, herein designated TARGET GENE. XRCC2 BINDING SITE1 through XRCC2 BINDING SITE3 are target binding sites found in

untranslated regions of mRNA encoded by XRCC2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of XRCC2 BINDING SITE1 through XRCC2 BINDING SITE3, designated SEQ ID:10148, SEQ ID:12605 and SEQ ID:9688 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31434] Another function of GAM189 is therefore inhibition of X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1), a gene which involves in the homologous recombination repair (hrr) pathway of double- stranded dna. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC2.

[31435] The function of XRCC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.V-yes-1 yamaguchi sarcoma viral oncogene homolog 1 (YES1, Accession NP_005424.1) is another GAM189 target gene, herein designated TARGET GENE. YES1 BINDING SITE is a target binding site found in the 3`

untranslated region of mRNA encoded by YES1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YES1 BINDING SITE, designated SEQ ID:16112, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31436] Another function of GAM189 is therefore inhibition of V-yes-1 yamaguchi sarcoma viral oncogene homolog 1 (YES1, Accession NP_005424.1), a gene which is a putative protein- tyrosine kinase. Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YES1.

[31437] The function of YES1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.ZAP (Accession NP_064504.2) is another GAM189 target gene, herein designated TARGET GENE. ZAP BINDING SITE1 and ZAP BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ZAP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of ZAP BINDING SITE1 and ZAP BINDING SITE2, designated SEQ ID:508 and SEQ ID:3071 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31438] Another function of GAM189 is therefore inhibition of ZAP (Accession NP_064504.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAP.

[31439] ZFP30 (Accession NP_055713.1) is another GAM189 target gene, herein designated TARGET GENE. ZFP30 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZFP30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP30 BINDING SITE, designated SEQ ID:9331, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31440] Another function of GAM189 is therefore inhibition of ZFP30 (Accession NP_055713.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP30.

[31441] ZFP42 (Accession NP_777560.1) is another GAM189 target gene, herein designated TARGET GENE. ZFP42 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZFP42, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP42 BINDING SITE, designated SEQ ID:10587, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31442] Another function of GAM189 is therefore inhibition of ZFP42 (Accession NP_777560.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP42.

[31443] Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_060667.1) is another GAM189 target gene, herein designated TARGET GENE. ZFP64 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP64, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP64 BINDING SITE, designated SEQ ID:15043, to the nucleotide

sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31444] Another function of GAM189 is therefore inhibition of Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_060667.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP64.

[31445] Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_071371.2) is another GAM189 target gene, herein designated TARGET GENE. ZFP64 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP64, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP64 BINDING SITE, designated SEQ ID:15043, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31446] Another function of GAM189 is therefore inhibition of Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_071371.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP64.

[31447] ZFYVE26 (Accession XP_031077.1) is another GAM189 target gene, herein designated TARGET GENE. ZFYVE26 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZFYVE26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFYVE26 BINDING SITE, designated SEQ ID:12160, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31448] Another function of GAM189 is therefore inhibition of ZFYVE26 (Accession XP_031077.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFYVE26.

[31449] ZMYND17 (Accession NP_848546.1) is another GAM189 target gene, herein designated TARGET GENE. ZMYND17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZMYND17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZMYND17 BINDING SITE, designated SEQ ID:456, to the

nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31450] Another function of GAM189 is therefore inhibition of ZMYND17 (Accession NP_848546.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZMYND17.

[31451] Zinc finger protein 18 (kox 11) (ZNF18, Accession XP_085596.2) is another GAM189 target gene, herein designated TARGET GENE. ZNF18 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF18 BINDING SITE, designated SEQ ID:19151, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31452] Another function of GAM189 is therefore inhibition of Zinc finger protein 18 (kox 11) (ZNF18, Accession XP_085596.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF18.

[31453] Zinc finger protein 253 (ZNF253, Accession NP_066385.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF253 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF253, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF253 BINDING SITE, designated SEQ ID:19746, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31454] Another function of GAM189 is therefore inhibition of Zinc finger protein 253 (ZNF253, Accession NP_066385.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF253.

[31455] Zinc finger protein 264 (ZNF264, Accession NP_003408.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF264 BINDING SITE1 and ZNF264 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZNF264, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of ZNF264 BINDING SITE1 and ZNF264 BINDING SITE2, designated SEQ ID:3319 and SEQ ID:9147 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31456] Another function of GAM189 is therefore inhibition of Zinc finger protein 264 (ZNF264, Accession NP_003408.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF264.

[31457] Zinc finger protein 273 (ZNF273, Accession XP_088082.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF273 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF273, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF273 BINDING SITE, designated SEQ ID:18868, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31458] Another function of GAM189 is therefore inhibition of Zinc finger protein 273 (ZNF273, Accession XP_088082.1) .

Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF273.

[31459] Zinc finger protein 281 (ZNF281, Accession NP_036614.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF281 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF281, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF281 BINDING SITE, designated SEQ ID:16434, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31460] Another function of GAM189 is therefore inhibition of Zinc finger protein 281 (ZNF281, Accession NP_036614.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF281.

[31461] Zinc finger protein 289, id1 regulated (ZNF289, Accession NP_115765.2) is another GAM189 target gene, herein designated TARGET GENE. ZNF289 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by ZNF289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF289 BINDING SITE, designated SEQ ID:13159, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31462] Another function of GAM189 is therefore inhibition of Zinc finger protein 289, id1 regulated (ZNF289, Accession NP_115765.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF289.

[31463] Zinc finger protein 305 (ZNF305, Accession NP_055539.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF305 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF305, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF305 BINDING SITE, designated SEQ ID:18505, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31464] Another function of GAM189 is therefore inhibition of Zinc finger protein 305 (ZNF305, Accession NP_055539.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF305.

[31465] Zinc finger protein 334 (ZNF334, Accession NP_060572.2) is another GAM189 target gene, herein designated TARGET GENE. ZNF334 BINDING SITE1 and ZNF334 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZNF334, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF334 BINDING SITE1 and ZNF334 BINDING SITE2, designated SEQ ID:9628 and SEQ ID:5064 respectively, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31466] Another function of GAM189 is therefore inhibition of Zinc finger protein 334 (ZNF334, Accession NP_060572.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF334.

[31467] Zinc finger protein 339 (ZNF339, Accession NP_067043.1)

is another GAM189 target gene, herein designated TARGET GENE. ZNF339 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF339, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF339 BINDING SITE, designated SEQ ID:1729, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31468] Another function of GAM189 is therefore inhibition of Zinc finger protein 339 (ZNF339, Accession NP_067043.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF339.

[31469] Zinc finger protein 345 (ZNF345, Accession NP_003410.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF345 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF345, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF345 BINDING SITE, designated SEQ ID:1011, to the nucleotide sequence of GAM189 RNA,

herein designated GAM RNA, also designated SEQ ID:246.

[31470] Another function of GAM189 is therefore inhibition of Zinc finger protein 345 (ZNF345, Accession NP_003410.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF345.

[31471] Zinc finger protein 398 (ZNF398, Accession NP_065832.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF398 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ZNF398, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF398 BINDING SITE, designated SEQ ID:8530, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31472] Another function of GAM189 is therefore inhibition of Zinc finger protein 398 (ZNF398, Accession NP_065832.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF398.

[31473] ZNF409 (Accession NP_055709.1) is another GAM189 tar-

get gene, herein designated TARGET GENE. ZNF409 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF409, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF409 BINDING SITE, designated SEQ ID:2388, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31474] Another function of GAM189 is therefore inhibition of ZNF409 (Accession NP_055709.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF409.

[31475] ZNF431 (Accession XP_086098.2) is another GAM189 target gene, herein designated TARGET GENE. ZNF431 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF431, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF431 BINDING SITE, designated SEQ ID:8477, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA,

also designated SEQ ID:246.

[31476] Another function of GAM189 is therefore inhibition of ZNF431 (Accession XP_086098.2) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF431.

[31477] ZNF432 (Accession NP_055465.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF432 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF432 BINDING SITE, designated SEQ ID:5065, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31478] Another function of GAM189 is therefore inhibition of ZNF432 (Accession NP_055465.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF432.

[31479] ZNF440 (Accession NP_689570.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF440 BINDING SITE is a target binding site found in the 3` untrans-

lated region of mRNA encoded by ZNF440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF440 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31480] Another function of GAM189 is therefore inhibition of ZNF440 (Accession NP_689570.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF440.

[31481] Zinc finger protein 70 (cos17) (ZNF70, Accession NP_068735.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF70 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZNF70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF70 BINDING SITE, designated SEQ ID:17076, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31482] Another function of GAM189 is therefore inhibition of Zinc finger protein 70 (cos17) (ZNF70, Accession NP_068735.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF70.

[31483] Zinc finger protein 70 (cos17) (ZNF70, Accession NP_852101.1) is another GAM189 target gene, herein designated TARGET GENE. ZNF70 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZNF70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF70 BINDING SITE, designated SEQ ID:17076, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31484] Another function of GAM189 is therefore inhibition of Zinc finger protein 70 (cos17) (ZNF70, Accession NP_852101.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF70.

[31485] Zinc finger protein 74 (cos52) (ZNF74, Accession NP_003417.1) is another GAM189 target gene, herein

designated TARGET GENE. ZNF74 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ZNF74, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF74 BINDING SITE, designated SEQ ID:12340, to the nucleotide sequence of GAM189 RNA, herein designated GAM RNA, also designated SEQ ID:246.

[31486] Another function of GAM189 is therefore inhibition of Zinc finger protein 74 (cos52) (ZNF74, Accession NP_003417.1) . Accordingly, utilities of GAM189 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF74.

[31487]

[31488] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 190 (GAM190), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[31489] GAM190 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method

by which GAM190 was detected is described hereinabove with reference to Figs. 8-15.

[31490] GAM190 gene, herein designated GAM GENE, and GAM190 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[31491] GAM190 gene encodes a GAM190 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM190 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM190 precursor RNA is designated SEQ ID:99, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:99 is located at position 151667587 relative to chromosome 3.

[31492] GAM190 precursor RNA folds onto itself, forming GAM190 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[31493] GAM190 precursor RNA folds onto itself, forming GAM190 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[31494] Nucleotide sequence of GAM190 precursor RNA, designated SEQ-ID: 99, and a schematic representation of a predicted secondary folding of GAM190 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[31495] An enzyme complex designated DICER COMPLEX, `dices` the GAM190 folded precursor RNA into GAM190 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM190 RNA is desig-

nated SEQ ID:289, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[31496] GAM190 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM190 target RNA, herein designated GAM TARGET RNA. GAM190 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[31497] GAM190 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM190 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM190 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM190 RNA may have a different number of target

binding sites in untranslated regions of a GAM190 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[31498] The complementary binding of GAM190 RNA, herein designated GAM RNA, to target binding sites on GAM190 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM190 target RNA into GAM190 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[31499] It is appreciated that GAM190 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM190 target genes. The mRNA of each one of this plurality of GAM190 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM190 RNA, herein designated GAM RNA, and which when bound by GAM190 RNA causes inhibition of translation of respective one or more GAM190 target proteins.

[31500] It is further appreciated by one skilled in the art that the

mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM190 gene, herein designated GAM GENE, on one or more GAM190 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[31501] It is appreciated that specific functions and accordingly utilities of GAM190 correlate with, and may be deduced from, the identity of the target genes which GAM190 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[31502]

[31503]

[31504] Atp-binding cassette, sub-family c (cftr/mrp), member 3 (ABCC3, Accession NP_064422.1) is a GAM190 target gene, herein designated TARGET GENE. ABCC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ABCC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC3 BINDING SITE, designated SEQ ID:1929, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31505] A function of GAM190 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 3 (ABCC3, Accession NP_064422.1), a gene which may act as an inducible transporter in the biliary and intestinal excretion of organic anions. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC3.

[31506] The function of ABCC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Acidic repeat containing (ACRC, Accession NP_443189.1) is another GAM190 target gene, herein

designated TARGET GENE. ACRC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ACRC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACRC BINDING SITE, designated SEQ ID:16426, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31507] Another function of GAM190 is therefore inhibition of Acidic repeat containing (ACRC, Accession NP_443189.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACRC.

[31508] Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1) is another GAM190 target gene, herein designated TARGET GENE. ADCY1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADCY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY1 BINDING SITE, designated SEQ ID:16609, to the

nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31509] Another function of GAM190 is therefore inhibition of Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1), a gene which a calmodulin- sensitive adenylyl cyclase. it may play a role in memory acquisition and learning. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY1.

[31510] The function of ADCY1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Amylo-1, 6-glucosidase, 4-alpha-glucanotransferase (glycogen debranching enzyme, glycogen storage disease type iii) (AGL, Accession NP_000636.1) is another GAM190 target gene, herein designated TARGET GENE. AGL BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by AGL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGL BINDING SITE, designated SEQ ID:9569, to the nucleotide

sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31511] Another function of GAM190 is therefore inhibition of Amylo-1, 6-glucosidase, 4-alpha-glucanotransferase (glycogen debranching enzyme, glycogen storage disease type iii) (AGL, Accession NP_000636.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGL.

[31512] AGS3 (Accession NP_056412.1) is another GAM190 target gene, herein designated TARGET GENE. AGS3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AGS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGS3 BINDING SITE, designated SEQ ID:16761, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31513] Another function of GAM190 is therefore inhibition of AGS3 (Accession NP_056412.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGS3.

[31514] Ankyrin-like with transmembrane domains 1 (ANKTM1, Accession NP_015628.1) is another GAM190 target gene, herein designated TARGET GENE. ANKTM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ANKTM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKTM1 BINDING SITE, designated SEQ ID:10754, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31515] Another function of GAM190 is therefore inhibition of Ankyrin-like with transmembrane domains 1 (ANKTM1, Accession NP_015628.1), a gene which attaches integral membrane proteins to cytoskeletal elements. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKTM1.

[31516] The function of ANKTM1 has been established by previous studies. A set of transformation- sensitive proteins that are expressed by normal fibroblasts but are specifically repressed after oncogenic transformation has emerged from studies of tumor virus- transformed fibroblasts. To

identify proteins that are lost during the establishment of the transformed phenotype of a tumor cell, Schenker and Trueb (1998) prepared a subtracted cDNA library with mRNA from normal human fibroblasts and from their matched SV40- transformed counterparts. They identified more than 40 clones that showed a dramatic reduction in their relative expression after oncogenic transformation, including a partial cDNA encoding a novel ankyrin- like protein, which has been named ANKTM1. ANKTM1 gene expression was consistently downregulated in a variety of cell lines derived from spontaneous mesenchymal tumors. By screening a human lung fibroblast cDNA library with the partial ANKTM1 cDNA, followed by 5- prime RACE, Jaquemar et al. (1999) isolated the complete ANKTM1 coding sequence. The deduced 1,119- amino acid ANKTM1 protein has a calculated molecular mass of 127.4 kD; the authors called it p120. ANKTM1 protein from fibroblast and liposarcoma cell extracts migrated as a 130-kD polypeptide on Western blots. The predicted ANKTM1 protein can be divided into 2 parts, an N- terminal portion that is related to the cytoskeletal protein ankyrin (see OMIM Ref. No. ANK1; 182900) and a C- terminal portion that is related to transmembrane proteins. The N- termi-

nal region contains eighteen 33- amino acid repeats, 15 of which share 21 to 52% sequence identity with the consensus motif derived from the repeats of ankyrin- like proteins and 3 of which share only partial similarity with the consensus repeat sequence. The C- terminal region contains 7 hydrophobic segments, 6 of which are putative transmembrane domains and 1 of which may enter the lipid bilayer only partially, possibly as a pore loop structure. ANKTM1 is predicted to assume a type II membrane orientation, with the N terminus located cytoplasmically. The overall structure of ANKTM1 is reminiscent of TRP- like proteins (e.g., TRPC7; 603749), which function as store- operated calcium channels. ANKTM1 contains 5 potential N- glycosylation sites, but 3 are situated cytoplasmically and are unlikely to be used. ANKTM1 does not contain an N- terminal signal peptide. Northern blot analysis detected a 4.6- kb ANKTM1 transcript in human fibroblasts. ANKTM1 expression was not observed in SV40- transformed fibroblasts or in cell lines derived from the following spontaneous mesenchymal tumors: 4 rhabdomyosarcomas, 2 fibrosarcomas, 1 osteosarcoma, and 1 chondrosarcoma. ANKTM1 was expressed in cells from a liposarcoma and in 1 of 2 leiomyosarcoma cell lines.

Northern blot analysis did not detect ANKTM1 expression in any of several adult or fetal human tissues. However, RT- PCR of RNA from a 12- week- old human embryo showed an extremely low level of ANKTM1 expression. Overexpression of recombinant ANKTM1 protein in eukaryotic cells appeared to interfere with normal growth. Jaquemar et al. (1999) suggested that ANKTM1 may play a direct or indirect role in signal transduction and growth control. By FISH, Jaquemar et al. (1999) mapped the ANKTM1 gene to 8q13.

[31517]

[31518] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31519] Jaquemar, D.; Schenker, T.; Trueb, B. : An ankyrin- like protein with transmembrane domains is specifically lost after oncogenic transformation of human fibroblasts. J. Biol. Chem. 274: 7325- 7333, 1999. ; and

[31520] Schenker, T.; Trueb, B. : Down- regulated proteins of mesenchymal tumor cells. Exp. Cell Res. 239: 161- 168, 1998.

[31521] Further studies establishing the function and utilities of ANKTM1 are found in John Hopkins OMIM database record

ID 604775, and in cited publications listed in Table 5, which are hereby incorporated by reference.Annexin a10 (ANXA10, Accession NP_009124.1) is another GAM190 target gene, herein designated TARGET GENE. ANXA10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ANXA10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANXA10 BINDING SITE, designated SEQ ID:6862, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31522] Another function of GAM190 is therefore inhibition of Annexin a10 (ANXA10, Accession NP_009124.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANXA10.

[31523] Rho gtpase activating protein 6 (ARHGAP6, Accession NP_001165.1) is another GAM190 target gene, herein designated TARGET GENE. ARHGAP6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ARHGAP6, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP6 BINDING SITE, designated SEQ ID:2102, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31524] Another function of GAM190 is therefore inhibition of Rho gtpase activating protein 6 (ARHGAP6, Accession NP_001165.1), a gene which activates the rho- type GTPases by converting them to an inactive GTP- bound state. and therefore may be associated with Skin defects syndrome. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Skin defects syndrome., and of other diseases and clinical conditions associated with ARHGAP6.

[31525] The function of ARHGAP6 has been established by previous studies. In a search for the genetic defect in microphthalmia with linear skin defects syndrome (MLS; 309801), Schaefer et al. (1997) trapped exons from 14 overlapping cosmids from the 500- kb MLS critical region in Xp22.3. Using exon connection followed by cDNA library screening, they identified a 2.4- kb contig of cDNA clones spanning 170 kb of genomic sequence in the MLS deletion region. Northern analysis of this cDNA detected a prominent

transcript of approximately 4.2 kb and a less abundant transcript of approximately 6 kb in all tissues examined, with additional transcripts in skeletal muscle. Sequence analysis revealed a coding region of 601 amino acids contained in 12 exons, with a splice variant isoform of 495 amino acids. The predicted protein sequence of the gene, symbolized ARHGAP6, contains homology to the GTPase-activating (GAP) domain of the Rho- GAP family of proteins (e.g., 300023), which has been implicated in the regulation of actin polymerization at the plasma membrane in several cellular processes. Schaefer et al. (1997) discussed reasons for thinking that a defect in the Rho pathway may play a role in the pathogenesis of MLS syndrome. Prakash et al. (2000) investigated the function of ARHGAP6 by generating Arhgap6 null mice and also by in vitro expression studies. Surprisingly, loss of the rhoGAP function of Arhgap6 did not cause any detectable phenotypic or behavioral abnormalities in the mutant mice. Transfected mammalian cells expressing ARHGAP6 lost their actin stress fibers, retracted from the growth surface, and extended thin, branching processes resembling filopodia. The ARHGAP6 protein colocalized with actin filaments through an N- terminal domain and recruited fila-

mentous actin into the growing processes. Mutation of a conserved arginine residue in the rhoGAP domain prevented the loss of stress fibers but had little effect on process outgrowth. The authors concluded that ARHGAP6 has 2 independent functions: one as a GAP with specificity for RhoA and the other as a cytoskeletal protein that promotes actin remodeling.

[31526]

[31527] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31528] Prakash, S. K.; Paylor, R.; Jenna, S.; Lamarche- Vane, N.; Armstrong, D. L.; Xu, B.; Mancini, M. A.; Zoghbi, H. Y. : Functional analysis of ARHGAP6, a novel GTPase- activating protein for RhoA. Hum. Molec. Genet. 9: 477- 488, 2000. ; and

[31529] Schaefer, L.; Prakash, S.; Zoghbi, H. Y. : Cloning and characterization of a novel rho- type GTPase- activating protein gene (ARHGAP6) from the critical region for microphthalmia with li.

[31530] Further studies establishing the function and utilities of ARHGAP6 are found in John Hopkins OMIM database record ID 300118, and in cited publications listed in Table

5, which are hereby incorporated by reference.Rho guanine nucleotide exchange factor (gef) 7 (ARHGEF7, Accession NP_003890.1) is another GAM190 target gene, herein designated TARGET GENE. ARHGEF7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARHGEF7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF7 BINDING SITE, designated SEQ ID:3061, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31531] Another function of GAM190 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 7 (ARHGEF7, Accession NP_003890.1), a gene which acts as a rac1 guanine nucleotide exchange factor (gef) and can induce membrane ruffling. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF7.

[31532] The function of ARHGEF7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.2.Atpase, class vi, type 11b (ATP11B, Accession

XP_087254.2) is another GAM190 target gene, herein designated TARGET GENE. ATP11B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP11B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP11B BINDING SITE, designated SEQ ID:10635, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31533] Another function of GAM190 is therefore inhibition of Atpase, class vi, type 11b (ATP11B, Accession XP_087254.2), a gene which is phosphorylated in their intermediate state, drives uphill transport of ions across membranes. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP11B.

[31534] The function of ATP11B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Atpase, h+ transporting, lysosomal 13kda, v1 subunit g isoform 2 (ATP6V1G2, Accession NP_612139.1) is another GAM190 target gene, herein designated TAR-

GET GENE. ATP6V1G2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ATP6V1G2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP6V1G2 BINDING SITE, designated SEQ ID:1415, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31535] Another function of GAM190 is therefore inhibition of Atpase, h+ transporting, lysosomal 13kda, v1 subunit g isoform 2 (ATP6V1G2, Accession NP_612139.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V1G2.

[31536] Atpase, h+ transporting, lysosomal 13kda, v1 subunit g isoform 2 (ATP6V1G2, Accession NP_569730.1) is another GAM190 target gene, herein designated TARGET GENE. ATP6V1G2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ATP6V1G2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of ATP6V1G2 BINDING SITE, designated SEQ ID:1415, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31537] Another function of GAM190 is therefore inhibition of Atpase, h+ transporting, lysosomal 13kda, v1 subunit g isoform 2 (ATP6V1G2, Accession NP_569730.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V1G2.

[31538] Atpase, cu++ transporting, beta polypeptide (wilson disease) (ATP7B, Accession NP_000044.1) is another GAM190 target gene, herein designated TARGET GENE. ATP7B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP7B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP7B BINDING SITE, designated SEQ ID:1270, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31539] Another function of GAM190 is therefore inhibition of Atpase, cu++ transporting, beta polypeptide (wilson dis-

ease) (ATP7B, Accession NP_000044.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP7B.

[31540] Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 5 (B4GALT5, Accession NP_004767.1) is another GAM190 target gene, herein designated TARGET GENE. B4GALT5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B4GALT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT5 BINDING SITE, designated SEQ ID:2973, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31541] Another function of GAM190 is therefore inhibition of Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 5 (B4GALT5, Accession NP_004767.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT5.

[31542] Bromodomain adjacent to zinc finger domain, 2a (BAZ2A, Accession NP_038477.1) is another GAM190 target gene,

herein designated TARGET GENE. BAZ2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BAZ2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAZ2A BINDING SITE, designated SEQ ID:6467, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31543] Another function of GAM190 is therefore inhibition of Bromodomain adjacent to zinc finger domain, 2a (BAZ2A, Accession NP_038477.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAZ2A.

[31544] C14orf132 (Accession NP_064600.1) is another GAM190 target gene, herein designated TARGET GENE. C14orf132 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf132 BINDING SITE, designated SEQ ID:10053, to the nucleotide sequence of GAM190 RNA, herein designated

GAM RNA, also designated SEQ ID:289.

[31545] Another function of GAM190 is therefore inhibition of C14orf132 (Accession NP_064600.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf132.

[31546] C1q and tumor necrosis factor related protein 5 (C1QTNF5, Accession NP_056460.1) is another GAM190 target gene, herein designated TARGET GENE. C1QTNF5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1QTNF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1QTNF5 BINDING SITE, designated SEQ ID:19062, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31547] Another function of GAM190 is therefore inhibition of C1q and tumor necrosis factor related protein 5 (C1QTNF5, Accession NP_056460.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QTNF5.

[31548] Carbohydrate kinase-like (CARKL, Accession

NP_037408.1) is another GAM190 target gene, herein designated TARGET GENE. CARKL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CARKL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARKL BINDING SITE, designated SEQ ID:13528, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31549] Another function of GAM190 is therefore inhibition of Carbohydrate kinase-like (CARKL, Accession NP_037408.1), a gene which is a putative carbohydrate kinase and may be a modifier for the cystinosis phenotype. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARKL.

[31550] The function of CARKL has been established by previous studies. Touchman et al. (2000) sequenced 200 kb surrounding the gene encoding cystinosin (CTNS; 606272), which is mutated in nephropathic cystinosis (OMIM Ref. No. 219800), on chromosome 17p13. They found that genomic sequence in this region matched known ESTs. Us-

ing PCR primers to amplify a human fetal kidney cDNA library, the authors cloned a cDNA, which they designated CARKL (carbohydrate kinase- like), encoding a deduced 478- amino acid protein. The CARKL protein contains motifs showing weak similarity to 2 domains of the FGGY family of carbohydrate kinases. It does not appear to contain a signal sequence, suggesting that it is localized in the cytoplasm. Northern blot analysis detected expression of a 3.9- kb CARKL transcript predominantly in liver, kidney, and pancreas, with weaker expression in heart, placenta, brain, and lung. Additionally, a 2.7- kb transcript was detected in liver and, to a lesser extent, in heart. By sequence analysis, Touchman et al. (2000) determined that the CARKL gene maps within the telomeric end of a 57- kb segment on 17p13 that is commonly deleted in cystinosis. They hypothesized that CARKL may be a modifier for the cystinosis phenotype.

[31551]

[31552] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31553] Touchman, J. W.; Anikster, Y.; Dietrich, N. L.; Braden Maduro, V. V.; McDowell, G.; Shotelersuk, V.; Bouffard, G.

G.; Beckstrom- Sternberg, S. M.; Gahl, W. A.; Green, E. D. : The genomic region encompassing the nephropathic cystinosis gene (CTNS): complete sequencing of a 200- kb segment and discovery of a novel gene within the common cystinosis- causing deletion. Genome Res. 10: 165-173, 2000. ; and

[31554] Phornphutkul, C.; Anikster, Y.; Huizing, M.; Braun, P.; Brodie, C.; Chou, J. Y.; Gahl, W. A. : The promoter of a lysosomal membrane transporter gene, CTNS, binds Sp-1, shares sequences.

[31555] Further studies establishing the function and utilities of CARKL are found in John Hopkins OMIM database record ID 605060, and in cited publications listed in Table 5, which are hereby incorporated by reference.CAS1 (Accession NP_075051.2) is another GAM190 target gene, herein designated TARGET GENE. CAS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAS1 BINDING SITE, designated SEQ ID:16002, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:289.

[31556] Another function of GAM190 is therefore inhibition of CAS1 (Accession NP_075051.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAS1.

[31557] Cyclin f (CCNF, Accession NP_001752.1) is another GAM190 target gene, herein designated TARGET GENE. CCNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNF BINDING SITE, designated SEQ ID:2161, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31558] Another function of GAM190 is therefore inhibition of Cyclin f (CCNF, Accession NP_001752.1), a gene which likely to be involved in the control of the cell cycle during s phase and g2. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNF.

[31559] The function of CCNF and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM130.1.Chemokine (c-c motif) receptor 2 (CCR2, Accession NP_000638.1) is another GAM190 target gene, herein designated TARGET GENE. CCR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CCR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR2 BINDING SITE, designated SEQ ID:8836, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31560] Another function of GAM190 is therefore inhibition of Chemokine (c-c motif) receptor 2 (CCR2, Accession NP_000638.1), a gene which binds chemokines and transduces a signal by increasing the intracellular calcium ions level. and therefore may be associated with Hiv- 1 infection. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Hiv- 1 infection, and of other diseases and clinical conditions associated with CCR2.

[31561] The function of CCR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM175.1.Cd209 antigen (CD209, Accession NP_066978.1) is another GAM190 target gene, herein designated TARGET GENE. CD209 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD209 BINDING SITE, designated SEQ ID:1357, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31562] Another function of GAM190 is therefore inhibition of Cd209 antigen (CD209, Accession NP_066978.1), a gene which may play an important role in the CD4- independent association of HIV with cells. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD209.

[31563] The function of CD209 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Cd4 antigen (p55) (CD4, Accession NP_000607.1) is another GAM190 target gene, herein designated TARGET GENE. CD4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by CD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD4 BINDING SITE, designated SEQ ID:4243, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31564] Another function of GAM190 is therefore inhibition of Cd4 antigen (p55) (CD4, Accession NP_000607.1), a gene which is T- cell surface glycoprotein and has role in cell-cell interactions and may act in signal transduction and therefore may be associated with Infectious and immune-mediated diseases. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Infectious and immune- mediated diseases, and of other diseases and clinical conditions associated with CD4.

[31565] The function of CD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Cdc14 cell division cycle 14 homolog a (s. cerevisiae) (CDC14A, Accession NP_003663.2) is another GAM190 target gene, herein designated TARGET GENE. CDC14A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA

encoded by CDC14A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC14A BINDING SITE, designated SEQ ID:12880, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31566] Another function of GAM190 is therefore inhibition of Cdc14 cell division cycle 14 homolog a (s. cerevisiae) (CDC14A, Accession NP_003663.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC14A.

[31567] Centaurin, delta 2 (CENTD2, Accession NP_056057.1) is another GAM190 target gene, herein designated TARGET GENE. CENTD2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CENTD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENTD2 BINDING SITE, designated SEQ ID:5185, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA,

also designated SEQ ID:289.

[31568] Another function of GAM190 is therefore inhibition of Centaurin, delta 2 (CENTD2, Accession NP_056057.1), a gene which involved in cell signaling/communication. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENTD2.

[31569] The function of CENTD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Centaurin, delta 2 (CENTD2, Accession NP_631920.1) is another GAM190 target gene, herein designated TARGET GENE. CENTD2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CENTD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENTD2 BINDING SITE, designated SEQ ID:5185, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31570] Another function of GAM190 is therefore inhibition of Centaurin, delta 2 (CENTD2, Accession NP_631920.1), a

gene which involved in cell signaling/communication. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENTD2.

[31571] The function of CENTD2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Chloride channel 6 (CLCN6, Accession NP_068504.1) is another GAM190 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:15103, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31572] Another function of GAM190 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_068504.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with CLCN6.

[31573] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Chloride channel 6 (CLCN6, Accession NP_068503.1) is another GAM190 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:15103, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31574] Another function of GAM190 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_068503.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN6.

[31575] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM40.1.Chloride channel 6 (CLCN6, Accession NP_001277.1) is another GAM190 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:15103, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31576] Another function of GAM190 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_001277.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN6.

[31577] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Chloride channel 6 (CLCN6, Accession NP_068505.1) is another GAM190 target gene, herein

designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:15103, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31578] Another function of GAM190 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NP_068505.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN6.

[31579] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 9 (CLECSF9, Accession NP_055173.1) is another GAM190 target gene, herein designated TARGET GENE. CLECSF9 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by CLECSF9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF9 BINDING SITE, designated SEQ ID:15211, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31580] Another function of GAM190 is therefore inhibition of C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 9 (CLECSF9, Accession NP_055173.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF9.

[31581] Clock homolog (mouse) (CLOCK, Accession NP_004889.1) is another GAM190 target gene, herein designated TARGET GENE. CLOCK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLOCK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLOCK BINDING SITE, designated SEQ ID:16410, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ

ID:289.

[31582] Another function of GAM190 is therefore inhibition of Clock homolog (mouse) (CLOCK, Accession NP_004889.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLOCK.

[31583] Carboxypeptidase a1 (pancreatic) (CPA1, Accession NP_001859.1) is another GAM190 target gene, herein designated TARGET GENE. CPA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPA1 BINDING SITE, designated SEQ ID:8808, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31584] Another function of GAM190 is therefore inhibition of Carboxypeptidase a1 (pancreatic) (CPA1, Accession NP_001859.1), a gene which is a monomeric pancreatic metalloprotease. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPA1.

[31585] The function of CPA1 has been established by previous

studies. Carboxypeptidase A (EC 3.4.2.1) is a pancreatic exopeptidase. Three different forms of human pancreatic procarboxypeptidase A have been isolated. The A1 and A2 (OMIM Ref. No. 600688) forms are monomeric proteins with different biochemical properties. Honey et al. (1984, 1986) found that an 8.6- kb human DNA fragment (detected by means of a rat cDNA probe for CPA) cosegregated with chromosome 7. The assignment was narrowed by demonstration of absence of the human DNA fragment in cells with a deletion of 7q22- qter. By studying mouse-hamster hybrid cells, Honey et al. (1986) assigned the CPA gene to mouse chromosome 6. Trypsin (OMIM Ref. No. 276000) is also on human 7q22- qter and on mouse 6. Stewart et al. (1990) concluded from multipoint linkage analysis with established chromosome 7 markers that the most likely location of carboxypeptidase is 7q31- qter. It lies distal to cystic fibrosis at a distance of approximately 12 cM Carboxypeptidase A1 is one of the genes whose expression in the pancreas was demonstrated by Velculescu et al. (1995) with a novel method for serial analysis of gene expression (SAGE). The method allowed the quantitative and simultaneous analysis of a large number of transcripts. To demonstrate the strategy, short diag-

nostic sequence tags (SSTs) were isolated from pancreas, concatenated, and cloned. Manual sequencing of 1,000 tags revealed a gene expression pattern characteristic of pancreas. New pancreatic transcripts corresponding to novel tags were also identified. SAGE is based on 2 principles: first, that a short nucleotide sequence tag (9 to 10 bp) contained sufficient information to uniquely identify a transcript; and second, that concatenation of SSTs allows the efficient analysis of transcripts in a serial manner by the sequencing of multiple tags within a single clone. Using SAGE, Velculescu et al. (1995) found that procarboxypeptidase A1 was the gene represented by the tag found most frequently in the pancreatic transcripts (7.6%). The authors suggested that SAGE should allow a direct readout of expression in any given cell type or tissue. They envisioned a major application to be the comparison of gene expression patterns in various developmental and disease states. Any laboratory with the capability to perform PCR and manual sequencing could perform SAGE for this purpose. Adaptation of this technique to an automated sequencer would allow the analysis of over 1,000 transcripts in a single 3- hour run

[31586]

[31587] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31588] Honey, N. K.; Sakaguchi, A. Y.; Lalley, P. A.; Quinto, C.; Rutter, W. J.; Naylor, S. L. : Assignment of the gene for carboxypeptidase A to human chromosome 7q22- qter and to mouse chromosome 6. Hum. Genet. 72: 27- 31, 1986. ; and

[31589] Velculescu, V. E.; Zhang, L.; Vogelstein, B.; Kinzler, K. W. : Serial analysis of gene expression. Science 270: 484- 487, 1995.

[31590] Further studies establishing the function and utilities of CPA1 are found in John Hopkins OMIM database record ID 114850, and in cited publications listed in Table 5, which are hereby incorporated by reference.Carboxypeptidase a5 (CPA5, Accession NP_525124.2) is another GAM190 target gene, herein designated TARGET GENE. CPA5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPA5 BINDING SITE, designated SEQ ID:16798, to the nucleotide se-

quence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31591] Another function of GAM190 is therefore inhibition of Carboxypeptidase a5 (CPA5, Accession NP_525124.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPA5.

[31592] Copine iii (CPNE3, Accession NP_003900.1) is another GAM190 target gene, herein designated TARGET GENE. CPNE3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPNE3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPNE3 BINDING SITE, designated SEQ ID:16717, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31593] Another function of GAM190 is therefore inhibition of Copine iii (CPNE3, Accession NP_003900.1), a gene which may function in membrane traffiking. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPNE3.

[31594] The function of CPNE3 has been established by previous

studies. By screening human brain cDNAs for the potential to encode proteins larger than 50 kD, Ishikawa et al. (1998) identified a CPNE3 cDNA, which they called KIAA0636. The deduced 537- amino acid CPNE3 protein is 65.7% identical to CPNE1. By SDS- PAGE, the in vitro transcribed/translated product of the CPNE3 cDNA had a molecular mass of 65 kD. RT- PCR detected CPNE3 expression in all human tissues examined By immunoprecipitation and kinase assays, Caudell et al. (2000) serendipitously identified a 60- kD protein identical to CPNE3. CPNE3 contains 2 N- terminal C2 domains, like CPNE1, CPNE6 (OMIM Ref. No. 605688), and CPNE7 (OMIM Ref. No. 605689), but these 4 copines have divergent C termini. CPNE3 is 63%, 52%, and 47% identical to CPNE1, CPNE6, and CPNE7, respectively. Northern blot analysis revealed ubiquitous expression of a 5.0- kb transcript. Biochemical analysis showed that CPNE3 appears to possess endogenous kinase activity, although it lacks a classic kinase domain. CPNE3 is phosphorylated on both serine and threonine residues but not on tyrosine residues.

[31595]

[31596] Full details of the abovementioned studies are described in the following publications, the disclosure of which are

hereby incorporated by reference:

[31597] Creutz, C. E.; Tomsig, J. L.; Snyder, S. L.; Gautier, M.- C.; Skouri, F.; Beisson, J.; Cohen, J. : The copines, a novel class of C2 domain- containing, calcium- dependent, phospholipid- binding proteins conserved from Paramecium to humans. J. Biol. Chem. 273: 1393- 1402, 1998. ; and

[31598] Caudell, E. G.; Caudell, J. J.; Tang, C.- H.; Yu, T.- K.; Frederick, M. J.; Grimm, E. A. : Characterization of human copine III as a phosphoprotein with associated kinase activity. Biochem.

[31599] Further studies establishing the function and utilities of CPNE3 are found in John Hopkins OMIM database record ID 604207, and in cited publications listed in Table 5, which are hereby incorporated by reference.Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_005102.2) is another GAM190 target gene, herein designated TARGET GENE. CRYZL1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRYZL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CRYZL1 BINDING SITE, designated SEQ ID:7391, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31600] Another function of GAM190 is therefore inhibition of Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_005102.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRYZL1.

[31601] Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_665857.1) is another GAM190 target gene, herein designated TARGET GENE. CRYZL1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRYZL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRYZL1 BINDING SITE, designated SEQ ID:7391, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31602] Another function of GAM190 is therefore inhibition of Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_665857.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with CRYZL1.

[31603] Digeorge syndrome critical region gene 2 (DGCR2, Accession NP_005128.1) is another GAM190 target gene, herein designated TARGET GENE. DGCR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DGCR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DGCR2 BINDING SITE, designated SEQ ID:16760, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31604] Another function of GAM190 is therefore inhibition of Digeorge syndrome critical region gene 2 (DGCR2, Accession NP_005128.1), a gene which is putative adhesion receptor and intervenes in cell- cell or cell- matrix interactions and therefore may be associated with Digeorge syndrome . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Digeorge syndrome ., and of other diseases and clinical conditions associated with DGCR2.

[31605] The function of DGCR2 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM84.1.DKFZp313G1735 (Accession XP_087728.2) is another GAM190 target gene, herein designated TARGET GENE. DKFZp313G1735 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp313G1735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp313G1735 BINDING SITE, designated SEQ ID:13429, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31606] Another function of GAM190 is therefore inhibition of DKFZp313G1735 (Accession XP_087728.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp313G1735.

[31607] DKFZP434E2135 (Accession NP_110431.1) is another GAM190 target gene, herein designated TARGET GENE. DKFZP434E2135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434E2135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434E2135 BINDING SITE, designated SEQ ID:14814, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31608] Another function of GAM190 is therefore inhibition of DKFZP434E2135 (Accession NP_110431.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434E2135.

[31609] DKFZp434L142 (Accession NP_057697.1) is another GAM190 target gene, herein designated TARGET GENE. DKFZp434L142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434L142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434L142 BINDING SITE, designated SEQ ID:14147, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31610] Another function of GAM190 is therefore inhibition of DKFZp434L142 (Accession NP_057697.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434L142.

[31611] DKFZP586D0919 (Accession NP_056248.1) is another GAM190 target gene, herein designated TARGET GENE. DKFZP586D0919 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586D0919, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586D0919 BINDING SITE, designated SEQ ID:19113, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31612] Another function of GAM190 is therefore inhibition of DKFZP586D0919 (Accession NP_056248.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586D0919.

[31613] DKFZP727G051 (Accession XP_045308.2) is another GAM190 target gene, herein designated TARGET GENE.

DKFZP727G051 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP727G051, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP727G051 BINDING SITE, designated SEQ ID:12451, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31614] Another function of GAM190 is therefore inhibition of DKFZP727G051 (Accession XP_045308.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP727G051.

[31615] DKFZP727M111 (Accession NP_056355.2) is another GAM190 target gene, herein designated TARGET GENE. DKFZP727M111 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP727M111, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP727M111 BINDING SITE, designated SEQ ID:12399, to the nucleotide sequence of

GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31616] Another function of GAM190 is therefore inhibition of DKFZP727M111 (Accession NP_056355.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP727M111.

[31617] DPF3 (Accession NP_036206.1) is another GAM190 target gene, herein designated TARGET GENE. DPF3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DPF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DPF3 BINDING SITE, designated SEQ ID:14462, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31618] Another function of GAM190 is therefore inhibition of DPF3 (Accession NP_036206.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPF3.

[31619] E2IG5 (Accession NP_055182.2) is another GAM190 target gene, herein designated TARGET GENE. E2IG5 BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by E2IG5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of E2IG5 BINDING SITE, designated SEQ ID:3520, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31620] Another function of GAM190 is therefore inhibition of E2IG5 (Accession NP_055182.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with E2IG5.

[31621] Extra spindle poles like 1 (s. cerevisiae) (ESPL1, Accession NP_036423.1) is another GAM190 target gene, herein designated TARGET GENE. ESPL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ESPL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ESPL1 BINDING SITE, designated SEQ ID:7872, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31622] Another function of GAM190 is therefore inhibition of Ex-

tra spindle poles like 1 (s. cerevisiae) (ESPL1, Accession NP_036423.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ESPL1.

[31623] Ets variant gene 1 (ETV1, Accession NP_004947.2) is another GAM190 target gene, herein designated TARGET GENE. ETV1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ETV1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ETV1 BINDING SITE, designated SEQ ID:18488, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31624] Another function of GAM190 is therefore inhibition of Ets variant gene 1 (ETV1, Accession NP_004947.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ETV1.

[31625] Exostoses (multiple)-like 2 (EXTL2, Accession NP_001430.1) is another GAM190 target gene, herein designated TARGET GENE. EXTL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by EXTL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EXTL2 BINDING SITE, designated SEQ ID:3245, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31626] Another function of GAM190 is therefore inhibition of Exostoses (multiple)-like 2 (EXTL2, Accession NP_001430.1), a gene which is homologous to the EXT and EXTL genes. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EXTL2.

[31627] The function of EXTL2 has been established by previous studies. In patients with multiple exostoses, mutations in 2 different genes have been found: EXT1 (OMIM Ref. No. 133700) on 8q and EXT2 (OMIM Ref. No. 133701) on 11p. In addition, linkage has demonstrated a third locus, EXT3 (OMIM Ref. No. 600209), on 19p as the site of mutations causing multiple exostoses. The family of EXT genes was extended by the identification of an EXT- like gene (EXTL1; 601738) showing a high degree of homology with the EXT genes. Wuyts et al. (1997) described a second EXT- like gene, EXTL2, that is homologous to the EXT and

EXTL genes. EXTL2 was found to consist of 5 exons encoding a ubiquitously expressed 330- amino acid protein. In addition, a putative pseudogene, EXTL2P, was identified. Saito et al. (1998) also cloned an EXTL2 cDNA, which they called EXTR2. By Northern blot analysis, they detected a 3.4- kb transcript in all tissues tested except leukocyte, where the gene was hardly transcribed. Its expression was relatively constant among tissues, but was weak in liver, lung, and thymus. By fluorescence in situ hybridization, Wuyts et al. (1997) mapped the EXTL2 gene to 1p12- p11 and the EXTL2 pseudogene to 2q24- q31. By somatic cell hybrid and radiation hybrid analyses, Saito et al. (1998) mapped the EXTL2 gene to chromosome 1p21. Wuyts and Van Hul (2000) cloned mouse Extl2, which has the same genomic structure as the human gene, encodes a protein identical in size, and has a sequence that is 87% identical to the human sequence. By radiation hybrid analysis, they mapped the mouse gene to chromosome 3.

[31628]

[31629] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31630] Wuyts, W.; Van Hul, W.; Hendrickx, J.; Speleman, F.; Wauters, J.; De Boulle, K.; Van Roy, N.; Van Agtmael, T.; Bossuyt, P.; Willems, P. J. : Identification and characterization of a novel member of the EXT gene family, EXTL2. Europ. J. Hum. Genet. 5: 382- 389, 1997. ; and

[31631] Wuyts, W.; Van Hul, W. : Characterization and genomic localization of the mouse Extl2 gene. Cytogenet. Cell Genet. 89: 185- 188, 2000.

[31632] Further studies establishing the function and utilities of EXTL2 are found in John Hopkins OMIM database record ID 602411, and in cited publications listed in Table 5, which are hereby incorporated by reference.FLJ00007 (Accession NP_258260.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ00007 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ00007, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00007 BINDING SITE, designated SEQ ID:9436, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31633] Another function of GAM190 is therefore inhibition of

FLJ00007 (Accession NP_258260.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00007.

[31634] FLJ12425 (Accession XP_098290.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ12425 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12425, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12425 BINDING SITE, designated SEQ ID:16869, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31635] Another function of GAM190 is therefore inhibition of FLJ12425 (Accession XP_098290.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12425.

[31636] FLJ13114 (Accession NP_078817.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ13114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13114, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13114 BINDING SITE, designated SEQ ID:6552, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31637] Another function of GAM190 is therefore inhibition of FLJ13114 (Accession NP_078817.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13114.

[31638] FLJ13744 (Accession NP_079287.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ13744 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13744, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13744 BINDING SITE, designated SEQ ID:5728, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31639] Another function of GAM190 is therefore inhibition of FLJ13744 (Accession NP_079287.1) . Accordingly, utilities

of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13744.

[31640] FLJ13962 (Accession NP_079138.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ13962 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13962, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13962 BINDING SITE, designated SEQ ID:3592, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31641] Another function of GAM190 is therefore inhibition of FLJ13962 (Accession NP_079138.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13962.

[31642] FLJ14779 (Accession NP_116227.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ14779 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14779, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14779 BINDING SITE, designated SEQ ID:10085, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31643] Another function of GAM190 is therefore inhibition of FLJ14779 (Accession NP_116227.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14779.

[31644] FLJ20035 (Accession NP_060101.2) is another GAM190 target gene, herein designated TARGET GENE. FLJ20035 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20035, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20035 BINDING SITE, designated SEQ ID:7692, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31645] Another function of GAM190 is therefore inhibition of FLJ20035 (Accession NP_060101.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20035.

[31646] FLJ20189 (Accession NP_060174.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ20189 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20189, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20189 BINDING SITE, designated SEQ ID:6742, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31647] Another function of GAM190 is therefore inhibition of FLJ20189 (Accession NP_060174.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20189.

[31648] FLJ20618 (Accession NP_060373.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ20618 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20618, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20618 BINDING SITE, designated SEQ ID:6968, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31649] Another function of GAM190 is therefore inhibition of FLJ20618 (Accession NP_060373.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20618.

[31650] FLJ21687 (Accession NP_079135.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ21687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21687 BINDING SITE, designated SEQ ID:11614, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31651] Another function of GAM190 is therefore inhibition of FLJ21687 (Accession NP_079135.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ21687.

[31652] FLJ22688 (Accession NP_079405.2) is another GAM190 target gene, herein designated TARGET GENE. FLJ22688 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22688, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22688 BINDING SITE, designated SEQ ID:18629, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31653] Another function of GAM190 is therefore inhibition of FLJ22688 (Accession NP_079405.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22688.

[31654] FLJ22955 (Accession NP_079095.2) is another GAM190 target gene, herein designated TARGET GENE. FLJ22955 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22955, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ22955 BINDING SITE, designated SEQ ID:11826, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31655] Another function of GAM190 is therefore inhibition of FLJ22955 (Accession NP_079095.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22955.

[31656] FLJ23235 (Accession NP_079219.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ23235 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23235 BINDING SITE, designated SEQ ID:2723, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31657] Another function of GAM190 is therefore inhibition of FLJ23235 (Accession NP_079219.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23235.

[31658] FLJ30046 (Accession NP_653196.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ30046 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30046, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30046 BINDING SITE, designated SEQ ID:2890, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31659] Another function of GAM190 is therefore inhibition of FLJ30046 (Accession NP_653196.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30046.

[31660] FLJ33318 (Accession NP_694961.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ33318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33318 BINDING SITE, designated SEQ ID:5940, to the

nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31661] Another function of GAM190 is therefore inhibition of FLJ33318 (Accession NP_694961.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33318.

[31662] FLJ33708 (Accession NP_775946.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ33708 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33708 BINDING SITE, designated SEQ ID:7549, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31663] Another function of GAM190 is therefore inhibition of FLJ33708 (Accession NP_775946.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33708.

[31664] FLJ38865 (Accession NP_689907.1) is another GAM190

target gene, herein designated TARGET GENE. FLJ38865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38865 BINDING SITE, designated SEQ ID:17233, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31665] Another function of GAM190 is therefore inhibition of FLJ38865 (Accession NP_689907.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38865.

[31666] FLJ39378 (Accession NP_847884.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ39378 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39378, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39378 BINDING SITE, designated SEQ ID:15804, to the nucleotide sequence of GAM190 RNA, herein designated

GAM RNA, also designated SEQ ID:289.

[31667] Another function of GAM190 is therefore inhibition of FLJ39378 (Accession NP_847884.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39378.

[31668] FLJ39873 (Accession NP_776160.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ39873 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39873, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39873 BINDING SITE, designated SEQ ID:16670, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31669] Another function of GAM190 is therefore inhibition of FLJ39873 (Accession NP_776160.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39873.

[31670] FLJ40597 (Accession NP_689828.1) is another GAM190 target gene, herein designated TARGET GENE. FLJ40597

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ40597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ40597 BINDING SITE, designated SEQ ID:10738, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31671] Another function of GAM190 is therefore inhibition of FLJ40597 (Accession NP_689828.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ40597.

[31672] Forkhead box o1a (rhabdomyosarcoma) (FOXO1A, Accession NP_002006.2) is another GAM190 target gene, herein designated TARGET GENE. FOXO1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOXO1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXO1A BINDING SITE, designated SEQ ID:9586, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA,

also designated SEQ ID:289.

[31673] Another function of GAM190 is therefore inhibition of Forkhead box o1a (rhabdomyosarcoma) (FOXO1A, Accession NP_002006.2), a gene which is a probable transcription factor. and therefore may be associated with Alveolar rhabdomyosarcoma- 2. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Alveolar rhabdomyosarcoma- 2., and of other diseases and clinical conditions associated with FOXO1A.

[31674] The function of FOXO1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Fyve and coiled-coil domain containing 1 (FYCO1, Accession NP_078789.1) is another GAM190 target gene, herein designated TARGET GENE. FYCO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FYCO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FYCO1 BINDING SITE, designated SEQ ID:17030, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31675] Another function of GAM190 is therefore inhibition of Fyve and coiled-coil domain containing 1 (FYCO1, Accession NP_078789.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FYCO1.

[31676] Growth arrest-specific 2 like 1 (GAS2L1, Accession NP_006469.2) is another GAM190 target gene, herein designated TARGET GENE. GAS2L1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by GAS2L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAS2L1 BINDING SITE, designated SEQ ID:11278, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31677] Another function of GAM190 is therefore inhibition of Growth arrest-specific 2 like 1 (GAS2L1, Accession NP_006469.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAS2L1.

[31678] GMPPA (Accession NP_037467.1) is another GAM190 target gene, herein designated TARGET GENE. GMPPA BIND-

ING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GMPPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GMPPA BINDING SITE, designated SEQ ID:709, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31679] Another function of GAM190 is therefore inhibition of GMPPA (Accession NP_037467.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GMPPA.

[31680] G protein-coupled receptor 56 (GPR56, Accession NP_005673.2) is another GAM190 target gene, herein designated TARGET GENE. GPR56 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR56, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR56 BINDING SITE, designated SEQ ID:5394, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31681] Another function of GAM190 is therefore inhibition of G

protein-coupled receptor 56 (GPR56, Accession NP_005673.2), a gene which transduces extracellular signals through heterotrimeric G proteins. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR56.

[31682] The function of GPR56 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Glutamate receptor, ionotropic, n-methyl-d-aspartate 3a (GRIN3A, Accession NP_597702.1) is another GAM190 target gene, herein designated TARGET GENE. GRIN3A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRIN3A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIN3A BINDING SITE, designated SEQ ID:14895, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31683] Another function of GAM190 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl-d-aspartate 3a

(GRIN3A, Accession NP_597702.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIN3A.

[31684] Histone deacetylase 6 (HDAC6, Accession NP_006035.2) is another GAM190 target gene, herein designated TARGET GENE. HDAC6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HDAC6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HDAC6 BINDING SITE, designated SEQ ID:11395, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31685] Another function of GAM190 is therefore inhibition of Histone deacetylase 6 (HDAC6, Accession NP_006035.2), a gene which plays an important role in transcriptional regulation, cell cycle progression and developmental events (by similarity). Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HDAC6.

[31686] The function of HDAC6 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.HECA (Accession NP_057301.1) is another GAM190 target gene, herein designated TARGET GENE. HECA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HECA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HECA BINDING SITE, designated SEQ ID:13430, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31687] Another function of GAM190 is therefore inhibition of HECA (Accession NP_057301.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HECA.

[31688] Human immunodeficiency virus type i enhancer binding protein 2 (HIVEP2, Accession NP_006725.2) is another GAM190 target gene, herein designated TARGET GENE. HIVEP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HIVEP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of HIVEP2 BINDING SITE, designated SEQ ID:3062, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31689] Another function of GAM190 is therefore inhibition of Human immunodeficiency virus type i enhancer binding protein 2 (HIVEP2, Accession NP_006725.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIVEP2.

[31690] Heat shock 70kda protein 4 (HSPA4, Accession XP_114482.1) is another GAM190 target gene, herein designated TARGET GENE. HSPA4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPA4 BINDING SITE, designated SEQ ID:10608, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31691] Another function of GAM190 is therefore inhibition of Heat shock 70kda protein 4 (HSPA4, Accession

XP_114482.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPA4.

[31692] Islet amyloid polypeptide (IAPP, Accession NP_000406.1) is another GAM190 target gene, herein designated TARGET GENE. IAPP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IAPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IAPP BINDING SITE, designated SEQ ID:10420, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31693] Another function of GAM190 is therefore inhibition of Islet amyloid polypeptide (IAPP, Accession NP_000406.1), a gene which selectively inhibits insulin- stimulated glucose utilization and glycogen deposition and therefore may be associated with Type ii diabetes . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Type ii diabetes ., and of other diseases and clinical conditions associated with IAPP.

[31694] The function of IAPP has been established by previous studies. IAPP has cysteine residues in positions 2 and 7, a

feature found in all known calcitonin gene- related peptides (OMIM Ref. No. 114130). IAPP shows 46% amino acid sequence homology with CGRP II (OMIM Ref. No. 114160). Since IAPP has been demonstrated immunochemically in normal beta cells of several mammals, it probably has an important role in respect to pancreatic islet function. Cooper et al. (1988) presented evidence that the 37-amino acid peptide may be a hormone present in normal individuals; hence, 'diabetes- associated peptide' is an inappropriate designation. Cooper et al. (1988) synthesized whole amylin by using solid- phase techniques, with formation of the disulfide linkage by oxidation in dilute aqueous solution and recovery of the peptide by lyophilization. The effects of amylin on glucose metabolism were studied by 2 in vitro preparations: isolated rat soleus muscle strips and isolated rat adipocytes. In skeletal muscle, amylin resulted in a marked decrease in insulin- stimulated glycogen synthesis with resulting reduction in insulin- stimulated glucose uptake. In muscle, amylin resulted in a failure of response to the concentration of insulin required to stimulate glucose uptake half- maximally in untreated muscles. No effects were observed in isolated adipocytes. Amylin may be a factor in

the etiology of the insulin resistance in type II diabetes mellitus. A correlation has been observed between the extent of islet amyloid deposition and the clinical severity of type II diabetes. Mosselman et al. (1988) isolated and partially characterized the human IAPP gene. By hybridization to DNA from human- rodent somatic cell hybrids, Mosselman et al. (1988) demonstrated that the IAPP gene is located on 12pter- q14. Because of the striking parallelism in the genetic constitution of chromosomes 11 and 12, suggesting an ancient tetraploidization, the mapping of this calcitonin- related gene to 12 is of interest; 2 calcitonin genes are located on 11p. The amyloid in amyloid-producing medullary carcinoma of the thyroid, a feature of multiple endocrine neoplasia type II (OMIM Ref. No. 171400), is derived from calcitonin. Sanke et al. (1988) showed that the islet amyloid polypeptide is derived from an 89- amino acid precursor by proteolytic processing. The processed peptide, 37- amino acids long, is bracketed at its NH(2) and COOH termini by lys- arg and gly-lys- arg, respectively. The data indicated that this amyloid peptide is generated by proteolytic processing similar to that for proinsulin and other islet prohormones and also that the peptide may be carboxyamidated. Mosselman et

al. (1989) found that 2 exons, which are approximately 5 kb apart, encode the 89- amino acid pre- pro- IAPP. A putative signal sequence at the amino- terminus of the precursor suggested that IAPP is a secreted protein. From the DNA sequence of a partial cDNA clone and a phage lambda genomic clone of the coding region of the amylin gene, Roberts et al. (1989) concluded that this peptide is synthesized as a precursor peptide called proamylin. The sequences of the genes for amylin and the calcitonin gene- related peptides show strong similarity, especially in their 5- prime coding regions, where these peptides have a conserved intramolecular disulfide bridge, and also in their 3- prime coding regions, where the presence of a glycine codon strongly suggests that the carboxyl- terminal residue, like that of CGRP, is amidated. In a study of the biologic activity of amylin synthesized with or without the disulfide bridge and/or amidation, Roberts et al. (1989) demonstrated that both features are necessary for full biologic activity, thereby confirming the functional importance of those regions of the molecule that have been conserved at both protein and genetic levels.

[31695] Animal model experiments lend further support to the function of IAPP. Janson et al. (1996) created homozygous

transgenic mice with a high level of expression of human IAPP. Male transgenic mice spontaneously developed diabetes mellitus by 8 weeks of age, which was associated with selective beta- cell death and impaired insulin secretion. Approximately 20% of female transgenic mice spontaneously developed diabetes at 30+ weeks of age when beta- cell degeneration and both amorphous and amyloid deposits of IAPP were present. Large deposits of IAPP- derived amyloid did not appear to be important to the cytotoxicity, but early, small amorphous intra- and extracellular aggregates of human IAPP were consistently present at the time of beta- cell death and therefore may be the most cytotoxic form of IAPP.

[31696] It is appreciated that the abovementioned animal model for IAPP is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[31697] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31698] Cooper, G. J.; Willis, A. C.; Clark, A.; Turner, R. C.; Sim, R. B.; Reid, K. B. : Purification and characterization of a peptide from amyloid- rich pancreases of type 2 diabetic pa-

tients. Proc. Nat. Acad. Sci. 84: 8628- 8632, 1987. ; and

[31699] Cooper, G. J. S.; Leighton, B.; Dimitriadis, G. D.; Parry-Billings, M.; Kowalchuk, J. M.; Howland, K.; Rothbard, J. B.; Willis, A. C.; Reid, K. B. M. : Amylin found in amyloid deposits.

[31700] Further studies establishing the function and utilities of IAPP are found in John Hopkins OMIM database record ID 147940, and in cited publications listed in Table 5, which are hereby incorporated by reference.Interleukin 10 receptor, alpha (IL10RA, Accession NP_001549.1) is another GAM190 target gene, herein designated TARGET GENE. IL10RA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL10RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL10RA BINDING SITE, designated SEQ ID:2291, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31701] Another function of GAM190 is therefore inhibition of Interleukin 10 receptor, alpha (IL10RA, Accession NP_001549.1), a gene which is a receptor for il- 10. Accordingly, utilities of GAM190 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with IL10RA.

[31702] The function of IL10RA has been established by previous studies. Interleukin- 10 (OMIM Ref. No. 124092) is a cytokine produced by B cells, T helper cells, and cells of the monocyte/macrophage lineage that exhibits diverse activities on different cell lines. Tan et al. (1993) showed that the protein can be enzymatically iodinated to high specific radioactivity with retention of biologic activity. The radiolabeled ligand was found to bind specifically to its receptor in several mouse and human cell lines. For both mouse and human cell lines examined, there appeared to be at most only a few hundred IL10 receptors per cell. Mouse IL10 was capable of blocking binding of human IL10 to mouse but not human cells. Ho et al. (1993) found that mouse il- 10r is structurally related to interferon receptors. Since IL- 10 inhibits macrophage activation by interferon- gamma, a possible implication of this relationship is interaction of IL- 10R and IFN- gamma- R or their signaling pathways. Liu et al. (1994) assigned the IL10R gene to chromosome 11 by analysis of DNAs from human/hamster hybrid cell lines. Taniyama et al. (1995) regionalized the assignment to 11q23.3 by fluorescence in situ

hybridization.

[31703]

[31704] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31705] Ho, A. S. Y.; Liu, Y.; Khan, T. A.; Hsu, D.- H.; Bazan, J. F.; Moore, K. W. : A receptor for interleukin 10 is related to interferon receptors. Proc. Nat. Acad. Sci. 90: 11267- 11271, 1993. ; and

[31706] Liu, Y.; Wei, S. H.- Y.; Ho, A. S.- Y.; de Waal Malefyt, R.; Moore, K. W. : Expression cloning and characterization of a human Il- 10 receptor. J. Immun. 152: 1821- 1829, 1994.

[31707] Further studies establishing the function and utilities of IL10RA are found in John Hopkins OMIM database record ID 146933, and in cited publications listed in Table 5, which are hereby incorporated by reference.Interleukin 18 receptor 1 (IL18R1, Accession NP_003846.1) is another GAM190 target gene, herein designated TARGET GENE. IL18R1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL18R1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of IL18R1 BINDING SITE, designated SEQ ID:10177, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31708] Another function of GAM190 is therefore inhibition of Interleukin 18 receptor 1 (IL18R1, Accession NP_003846.1), a gene which is required for dorsal- ventral embryonic polarity and promotes heterophilic cellular adhesion. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL18R1.

[31709] The function of IL18R1 has been established by previous studies. Using a YAC template known to contain IL1R1 (OMIM Ref. No. 147810), Parnet et al. (1996) cloned by PCR with degenerate primers what was thought to be a member of the interleukin- 1 receptor family, which they called IL1 receptor- related protein (OMIM Ref. No. IL1RRP). The gene encodes a 541- amino acid protein. Although the sequence was similar to that of IL1Rs, the extracellular portion failed to bind IL1A (OMIM Ref. No. 147760), IL1B (OMIM Ref. No. 147720), or IL1RN (OMIM Ref. No. 147679). When the cytoplasmic domain was fused to mouse IL1 extracellular and transmembrane por-

tions, it activated NF- kappa- B (OMIM Ref. No. 164011) in response to IL1. Northern blot analysis revealed that IL1RRP is expressed in lung, leukocytes, spleen, liver, thymus, prostate, small intestine, colon, placenta, and heart, and is absent from brain, skeletal muscle, pancreas, and kidney. Torigoe et al. (1997) purified human IL18R, symbolized IL18R1, by selecting a Hodgkin disease cell line, L428, that was the best binder in IL18 (OMIM Ref. No. 600953) binding assays. The binding of radiolabeled IL18 was inhibited by IL18 but not by IL1B, with which it has 15% amino acid homology but no functional resemblance. The authors raised a monoclonal antibody against L428 cells and used it to purify IL18R from solubilized cells after wheat germ lectin chromatography. They found that the internal amino acid sequence matched that of IL1RRP. When expressed in COS- 1 cells, the cDNA of IL1RRP conferred IL18 binding properties and the ability to activate NF- kappa- B in response to IL18 but not IL1B.

[31710]

[31711] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31712] Dale, M.; Nicklin, M. J. : Interleukin- 1 receptor cluster:

gene organization of IL1R2, IL1R1, IL1RL2 (IL- 1Rrp2), IL1RL1 (T1/ST2), and IL18R1 (IL- 1Rrp) on human chromosome 2q. Genomics 57: 177- 179, 1999. ; and

[31713] Parnet, P.; Garka, K. E.; Bonnert, T. P.; Dower, S. K.; Sims, J. E. : IL- 1Rrp is a novel receptor- like molecule similar to the type I interleukin- 1 receptor and its homologues T1/ST2 an.

[31714] Further studies establishing the function and utilities of IL18R1 are found in John Hopkins OMIM database record ID 604494, and in cited publications listed in Table 5, which are hereby incorporated by reference.Insulin receptor-related receptor (INSRR, Accession XP_043563.2) is another GAM190 target gene, herein designated TARGET GENE. INSRR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by INSRR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INSRR BINDING SITE, designated SEQ ID:19916, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31715] Another function of GAM190 is therefore inhibition of In-

sulin receptor-related receptor (INSRR, Accession XP_043563.2), a gene which phosphorylates the insulin receptor substrates irs- 1 and irs- 2. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INSRR.

[31716] The function of INSRR has been established by previous studies. Shier and Watt (1989) isolated genomic DNA that appeared to encode a novel receptor that was structurally as similar to the insulin receptor (OMIM Ref. No. 147670) and the IGF1 receptor (OMIM Ref. No. 147370) as the last two are to each other. This similarity suggested that the insulin receptor- related receptor (IRR) mediates the action of a ligand that is identical or very similar to insulin, IGF1, or IGF2. Kurachi et al. (1992) isolated IRR cDNA from rat brain and examined the expression of IRR mRNA in a variety of rat tissues. They demonstrated that, in contrast to the wide distribution of the insulin receptor and the IGF1 receptor mRNAs, the IRR mRNA is expressed preferentially in the kidney, which indicates that it has unique functions as a member of the insulin receptor family. Using genomic DNA encoding part of IRR in Southern blot analysis of DNA from human- mouse cell hybrids, Shier et al. (1990) assigned the INSRR gene to human chromo-

some 1. By radiation hybrid analysis, Whitmore et al. (1999) mapped the gene to chromosome 1q21- q23

[31717]

[31718] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31719] Shier, P.; Willard, H. F.; Watt, V. M. : Localization of the insulin receptor- related receptor gene to human chromosome 1. Cytogenet. Cell Genet. 54: 80- 81, 1990. ; and

[31720] Whitmore, T. E.; Maurer, M. F.; Day, H. L.; Jelmberg, A. C.; Dasovich, M. M.; Sundborg, L. M.; Burkhead, S. K.; Heipel, M. D.; Madden, K. L.; Kramer, J. M.; Kuijper, J. L.; Xu, W. F.; Ja.

[31721] Further studies establishing the function and utilities of INSRR are found in John Hopkins OMIM database record ID 147671, and in cited publications listed in Table 5, which are hereby incorporated by reference.Insulin receptor substrate 2 (IRS2, Accession XP_007095.5) is another GAM190 target gene, herein designated TARGET GENE. IRS2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IRS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of IRS2 BINDING SITE, designated SEQ ID:13393, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31722] Another function of GAM190 is therefore inhibition of Insulin receptor substrate 2 (IRS2, Accession XP_007095.5), a gene which may mediate the control of various cellular processes by insulin. and therefore may be associated with Diabetes, type ii, susceptibility to. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Diabetes, type ii, susceptibility to, and of other diseases and clinical conditions associated with IRS2.

[31723] The function of IRS2 has been established by previous studies. The protein IRS1 (OMIM Ref. No. 147545) acts as an interface between signaling proteins with Src homology- 2 domains (SH2 proteins) and the receptors for insulin (INS; 176730), IGF2 (OMIM Ref. No. 147470), growth hormone (GH1; 139250), several interleukins (IL4, 147780; IL9, 146931; IL13, 147683), and other cytokines. It regulates gene expression and stimulates mitogenesis and appears to mediate insulin/IGF1- stimulated glucose transport. Thus, the finding that survival of the homozygous Irs1 knockout mouse with only mild resistance to

hypertension was surprising. This dilemma was provisionally resolved by the discovery by Sun et al. (1995) of a second IRS signaling protein in mouse. They purified and cloned a likely candidate from mouse myeloid progenitor cells and, because of its resemblance to IRS1, they designated it IRS2. Alignment of the sequences of IRS2 and IRS1 demonstrated a highly conserved N terminus containing a pleckstrin- homology domain and a phosphotyrosine-binding (PTB) domain, and a poorly conserved C terminus containing several tyrosine phosphorylation motifs. IRS2 is expressed in many cells, including tissues from the homozygous IRS1 knockout mouse. Sun et al. (1995) suggested that IRS2 may be essential for signaling by several receptor systems. Mammarella et al. (2000) genotyped 193 Italian patients with type II diabetes (OMIM Ref. No. 125853) and 206 control subjects for the IRS2 G1057D polymorphism (600797.0001). They found evidence for a strong association between type II diabetes and the polymorphism, which appears to be protective against type II diabetes in a codominant fashion

[31724] Animal model experiments lend further support to the function of IRS2. Tobe et al. (2001) observed that Irs2-deficient mice (Kubota et al. (2000)) showed increased

adiposity with increased serum leptin level, suggesting leptin resistance before the mice developed diabetes. Using oligonucleotide microarray and Northern blot analyses to analyze gene expression, Tobe et al. (2001) detected increased expression of SREBP1, a downstream target of insulin, in Irs2- deficient mouse liver. Using high dose leptin administration, They provided evidence that leptin resistance in Irs2- deficient mice is causally related to SREBP1 gene induction. The authors concluded that Irs2 gene disruption results in leptin resistance, causing SREBP1 gene induction, obesity, fatty liver, and diabetes

[31725] It is appreciated that the abovementioned animal model for IRS2 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[31726] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31727] Sun, X. J.; Wang, L.- M.; Zhang, Y.; Yenush, L.; Myers, M. G., Jr.; Glasheen, E.; Lane, W. S.; Pierce, J. H.; White, M. F. : Role of IRS- 2 in insulin and cytokine signalling. Nature 377: 173- 177, 1995. ; and

[31728] Tobe, K.; Suzuki, R.; Aoyama, M.; Yamauchi, T.; Kamon, J.;

Kubota, N.; Terauchi, Y.; Matsui, J.; Akanuma, Y.; Kimura, S.; Tanaka, J.; Abe, M.; Ohsumi, J.; Nagai, R.; Kadowaki, T. : Incre.

[31729] Further studies establishing the function and utilities of IRS2 are found in John Hopkins OMIM database record ID 600797, and in cited publications listed in Table 5, which are hereby incorporated by reference.Inter-alpha (globulin) inhibitor, h1 polypeptide (ITIH1, Accession NP_002206.1) is another GAM190 target gene, herein designated TARGET GENE. ITIH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITIH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITIH1 BINDING SITE, designated SEQ ID:16797, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31730] Another function of GAM190 is therefore inhibition of Inter-alpha (globulin) inhibitor, h1 polypeptide (ITIH1, Accession NP_002206.1), a gene which may act as a carrier of hyaluronan in serum or as a binding protein between hyaluronan and other matrix protein. Accordingly, utilities

of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITIH1.

[31731] The function of ITIH1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Potassium channel, subfamily k, member 5 (KCNK5, Accession NP_003731.1) is another GAM190 target gene, herein designated TARGET GENE. KCNK5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KCNK5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNK5 BINDING SITE, designated SEQ ID:14350, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31732] Another function of GAM190 is therefore inhibition of Potassium channel, subfamily k, member 5 (KCNK5, Accession NP_003731.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNK5.

[31733] KEO4 (Accession NP_006450.1) is another GAM190 target gene, herein designated TARGET GENE. KEO4 BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KEO4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KEO4 BINDING SITE, designated SEQ ID:12625, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31734] Another function of GAM190 is therefore inhibition of KEO4 (Accession NP_006450.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KEO4.

[31735] KIAA0179 (Accession XP_035973.4) is another GAM190 target gene, herein designated TARGET GENE. KIAA0179 BINDING SITE1 and KIAA0179 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0179, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0179 BINDING SITE1 and KIAA0179 BINDING SITE2, designated SEQ ID:16659 and SEQ ID:5898 respectively, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:289.

[31736] Another function of GAM190 is therefore inhibition of KIAA0179 (Accession XP_035973.4) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0179.

[31737] KIAA1001 (Accession NP_055775.1) is another GAM190 target gene, herein designated TARGET GENE. KIAA1001 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1001 BINDING SITE, designated SEQ ID:2770, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31738] Another function of GAM190 is therefore inhibition of KIAA1001 (Accession NP_055775.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1001.

[31739] KIAA1007 (Accession NP_057368.1) is another GAM190 target gene, herein designated TARGET GENE. KIAA1007

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1007, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1007 BINDING SITE, designated SEQ ID:17180, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31740] Another function of GAM190 is therefore inhibition of KIAA1007 (Accession NP_057368.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1007.

[31741] KIAA1025 (Accession XP_034056.6) is another GAM190 target gene, herein designated TARGET GENE. KIAA1025 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1025, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1025 BINDING SITE, designated SEQ ID:11253, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31742] Another function of GAM190 is therefore inhibition of KIAA1025 (Accession XP_034056.6) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1025.

[31743] KIAA1200 (Accession XP_031054.4) is another GAM190 target gene, herein designated TARGET GENE. KIAA1200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1200, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1200 BINDING SITE, designated SEQ ID:8002, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31744] Another function of GAM190 is therefore inhibition of KIAA1200 (Accession XP_031054.4) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1200.

[31745] KIAA1432 (Accession XP_039698.3) is another GAM190 target gene, herein designated TARGET GENE. KIAA1432 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by KIAA1432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1432 BINDING SITE, designated SEQ ID:20070, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31746] Another function of GAM190 is therefore inhibition of KIAA1432 (Accession XP_039698.3) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1432.

[31747] KIAA1613 (Accession XP_035946.3) is another GAM190 target gene, herein designated TARGET GENE. KIAA1613 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1613, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1613 BINDING SITE, designated SEQ ID:8531, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31748] Another function of GAM190 is therefore inhibition of

KIAA1613 (Accession XP_035946.3) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1613.

[31749] KIAA1813 (Accession XP_046743.2) is another GAM190 target gene, herein designated TARGET GENE. KIAA1813 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1813 BINDING SITE, designated SEQ ID:13394, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31750] Another function of GAM190 is therefore inhibition of KIAA1813 (Accession XP_046743.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1813.

[31751] KIAA1894 (Accession XP_058025.2) is another GAM190 target gene, herein designated TARGET GENE. KIAA1894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1894, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1894 BINDING SITE, designated SEQ ID:7357, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31752] Another function of GAM190 is therefore inhibition of KIAA1894 (Accession XP_058025.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1894.

[31753] KIAA1999 (Accession XP_114447.2) is another GAM190 target gene, herein designated TARGET GENE. KIAA1999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1999 BINDING SITE, designated SEQ ID:4798, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31754] Another function of GAM190 is therefore inhibition of KIAA1999 (Accession XP_114447.2) . Accordingly, utilities

of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1999.

[31755] KIAA2028 (Accession XP_059415.2) is another GAM190 target gene, herein designated TARGET GENE. KIAA2028 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA2028, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA2028 BINDING SITE, designated SEQ ID:7392, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31756] Another function of GAM190 is therefore inhibition of KIAA2028 (Accession XP_059415.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2028.

[31757] LCHN (Accession XP_098615.2) is another GAM190 target gene, herein designated TARGET GENE. LCHN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LCHN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II

or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LCHN BINDING SITE, designated SEQ ID:13962, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31758] Another function of GAM190 is therefore inhibition of LCHN (Accession XP_098615.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LCHN.

[31759] Lim homeobox protein 3 (LHX3, Accession NP_055379.1) is another GAM190 target gene, herein designated TARGET GENE. LHX3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LHX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LHX3 BINDING SITE, designated SEQ ID:17614, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31760] Another function of GAM190 is therefore inhibition of Lim homeobox protein 3 (LHX3, Accession NP_055379.1) . Accordingly, utilities of GAM190 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with LHX3.

[31761] Lim homeobox protein 3 (LHX3, Accession NP_835258.1) is another GAM190 target gene, herein designated TARGET GENE. LHX3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LHX3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LHX3 BINDING SITE, designated SEQ ID:17614, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31762] Another function of GAM190 is therefore inhibition of Lim homeobox protein 3 (LHX3, Accession NP_835258.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LHX3.

[31763] LOC112868 (Accession XP_053402.1) is another GAM190 target gene, herein designated TARGET GENE. LOC112868 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC112868, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112868 BINDING SITE, designated SEQ ID:19114, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31764] Another function of GAM190 is therefore inhibition of LOC112868 (Accession XP_053402.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112868.

[31765] LOC122282 (Accession XP_063046.4) is another GAM190 target gene, herein designated TARGET GENE. LOC122282 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC122282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC122282 BINDING SITE, designated SEQ ID:3932, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31766] Another function of GAM190 is therefore inhibition of LOC122282 (Accession XP_063046.4) . Accordingly, utilities of GAM190 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC122282.

[31767] LOC130074 (Accession XP_072228.2) is another GAM190 target gene, herein designated TARGET GENE. LOC130074 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC130074, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130074 BINDING SITE, designated SEQ ID:12021, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31768] Another function of GAM190 is therefore inhibition of LOC130074 (Accession XP_072228.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130074.

[31769] LOC130951 (Accession NP_620159.2) is another GAM190 target gene, herein designated TARGET GENE. LOC130951 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC130951, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC130951 BINDING SITE, designated SEQ ID:12589, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31770] Another function of GAM190 is therefore inhibition of LOC130951 (Accession NP_620159.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130951.

[31771] LOC145820 (Accession XP_085246.1) is another GAM190 target gene, herein designated TARGET GENE. LOC145820 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145820, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145820 BINDING SITE, designated SEQ ID:17550, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31772] Another function of GAM190 is therefore inhibition of LOC145820 (Accession XP_085246.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC145820.

[31773] LOC146895 (Accession XP_097120.1) is another GAM190 target gene, herein designated TARGET GENE. LOC146895 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146895, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146895 BINDING SITE, designated SEQ ID:17975, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31774] Another function of GAM190 is therefore inhibition of LOC146895 (Accession XP_097120.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146895.

[31775] LOC150138 (Accession XP_086789.1) is another GAM190 target gene, herein designated TARGET GENE. LOC150138 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC150138 BINDING SITE, designated SEQ ID:16139, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31776] Another function of GAM190 is therefore inhibition of LOC150138 (Accession XP_086789.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150138.

[31777] LOC150933 (Accession XP_097971.1) is another GAM190 target gene, herein designated TARGET GENE. LOC150933 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150933, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150933 BINDING SITE, designated SEQ ID:802, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31778] Another function of GAM190 is therefore inhibition of LOC150933 (Accession XP_097971.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150933.

[31779] LOC151979 (Accession XP_087354.5) is another GAM190 target gene, herein designated TARGET GENE. LOC151979 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151979, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151979 BINDING SITE, designated SEQ ID:2273, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31780] Another function of GAM190 is therefore inhibition of LOC151979 (Accession XP_087354.5) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151979.

[31781] LOC157556 (Accession XP_098783.1) is another GAM190 target gene, herein designated TARGET GENE. LOC157556 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC157556, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157556 BINDING SITE, designated SEQ ID:13070, to

the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31782] Another function of GAM190 is therefore inhibition of LOC157556 (Accession XP_098783.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157556.

[31783] LOC168474 (Accession XP_095122.3) is another GAM190 target gene, herein designated TARGET GENE. LOC168474 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC168474, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC168474 BINDING SITE, designated SEQ ID:1886, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31784] Another function of GAM190 is therefore inhibition of LOC168474 (Accession XP_095122.3) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168474.

[31785] LOC196264 (Accession XP_113683.1) is another GAM190

target gene, herein designated TARGET GENE. LOC196264 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC196264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196264 BINDING SITE, designated SEQ ID:2140, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31786] Another function of GAM190 is therefore inhibition of LOC196264 (Accession XP_113683.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196264.

[31787] LOC201229 (Accession XP_113925.1) is another GAM190 target gene, herein designated TARGET GENE. LOC201229 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201229, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201229 BINDING SITE, designated SEQ ID:8606, to the nucleotide sequence of GAM190 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:289.

[31788] Another function of GAM190 is therefore inhibition of LOC201229 (Accession XP_113925.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201229.

[31789] LOC203107 (Accession XP_300975.1) is another GAM190 target gene, herein designated TARGET GENE. LOC203107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC203107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC203107 BINDING SITE, designated SEQ ID:3628, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31790] Another function of GAM190 is therefore inhibition of LOC203107 (Accession XP_300975.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203107.

[31791] LOC222160 (Accession XP_168431.1) is another GAM190 target gene, herein designated TARGET GENE. LOC222160

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222160, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222160 BINDING SITE, designated SEQ ID:4845, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31792] Another function of GAM190 is therefore inhibition of LOC222160 (Accession XP_168431.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222160.

[31793] LOC253782 (Accession XP_171023.1) is another GAM190 target gene, herein designated TARGET GENE. LOC253782 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253782, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253782 BINDING SITE, designated SEQ ID:10609, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31794] Another function of GAM190 is therefore inhibition of LOC253782 (Accession XP_171023.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253782.

[31795] LOC255167 (Accession XP_173156.1) is another GAM190 target gene, herein designated TARGET GENE. LOC255167 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC255167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255167 BINDING SITE, designated SEQ ID:8769, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31796] Another function of GAM190 is therefore inhibition of LOC255167 (Accession XP_173156.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255167.

[31797] LOC256374 (Accession XP_170597.1) is another GAM190 target gene, herein designated TARGET GENE. LOC256374 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC256374, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256374 BINDING SITE, designated SEQ ID:4774, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31798] Another function of GAM190 is therefore inhibition of LOC256374 (Accession XP_170597.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256374.

[31799] LOC283107 (Accession XP_210889.1) is another GAM190 target gene, herein designated TARGET GENE. LOC283107 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283107 BINDING SITE, designated SEQ ID:19787, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31800] Another function of GAM190 is therefore inhibition of

LOC283107 (Accession XP_210889.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283107.

[31801] LOC283143 (Accession XP_210920.1) is another GAM190 target gene, herein designated TARGET GENE. LOC283143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283143 BINDING SITE, designated SEQ ID:8033, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31802] Another function of GAM190 is therefore inhibition of LOC283143 (Accession XP_210920.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283143.

[31803] LOC283244 (Accession XP_208583.2) is another GAM190 target gene, herein designated TARGET GENE. LOC283244 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283244, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283244 BINDING SITE, designated SEQ ID:11642, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31804] Another function of GAM190 is therefore inhibition of LOC283244 (Accession XP_208583.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283244.

[31805] LOC283331 (Accession XP_210977.1) is another GAM190 target gene, herein designated TARGET GENE. LOC283331 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283331, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283331 BINDING SITE, designated SEQ ID:19234, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31806] Another function of GAM190 is therefore inhibition of LOC283331 (Accession XP_210977.1) . Accordingly, utili-

ties of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283331.

[31807] LOC283352 (Accession XP_210989.1) is another GAM190 target gene, herein designated TARGET GENE. LOC283352 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283352, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283352 BINDING SITE, designated SEQ ID:11381, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31808] Another function of GAM190 is therefore inhibition of LOC283352 (Accession XP_210989.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283352.

[31809] LOC283582 (Accession XP_211119.1) is another GAM190 target gene, herein designated TARGET GENE. LOC283582 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283582, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283582 BINDING SITE, designated SEQ ID:19719, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31810] Another function of GAM190 is therefore inhibition of LOC283582 (Accession XP_211119.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283582.

[31811] LOC283624 (Accession XP_211126.1) is another GAM190 target gene, herein designated TARGET GENE. LOC283624 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283624, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283624 BINDING SITE, designated SEQ ID:3276, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31812] Another function of GAM190 is therefore inhibition of LOC283624 (Accession XP_211126.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283624.

[31813] LOC283911 (Accession XP_211259.2) is another GAM190 target gene, herein designated TARGET GENE. LOC283911 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283911, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283911 BINDING SITE, designated SEQ ID:5990, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31814] Another function of GAM190 is therefore inhibition of LOC283911 (Accession XP_211259.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283911.

[31815] LOC284019 (Accession XP_211302.1) is another GAM190 target gene, herein designated TARGET GENE. LOC284019 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC284019 BINDING SITE, designated SEQ ID:17779, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31816] Another function of GAM190 is therefore inhibition of LOC284019 (Accession XP_211302.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284019.

[31817] LOC284145 (Accession XP_211353.1) is another GAM190 target gene, herein designated TARGET GENE. LOC284145 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284145, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284145 BINDING SITE, designated SEQ ID:4876, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31818] Another function of GAM190 is therefore inhibition of LOC284145 (Accession XP_211353.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284145.

[31819] LOC284260 (Accession XP_211408.1) is another GAM190 target gene, herein designated TARGET GENE. LOC284260 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284260, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284260 BINDING SITE, designated SEQ ID:9975, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31820] Another function of GAM190 is therefore inhibition of LOC284260 (Accession XP_211408.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284260.

[31821] LOC284665 (Accession XP_211581.1) is another GAM190 target gene, herein designated TARGET GENE. LOC284665 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284665, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC284665 BINDING SITE, designated SEQ ID:9976, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31822] Another function of GAM190 is therefore inhibition of LOC284665 (Accession XP_211581.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284665.

[31823] LOC284678 (Accession XP_209318.1) is another GAM190 target gene, herein designated TARGET GENE. LOC284678 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284678, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284678 BINDING SITE, designated SEQ ID:10939, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31824] Another function of GAM190 is therefore inhibition of LOC284678 (Accession XP_209318.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284678.

[31825] LOC284719 (Accession XP_211601.1) is another GAM190 target gene, herein designated TARGET GENE. LOC284719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284719 BINDING SITE, designated SEQ ID:9623, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31826] Another function of GAM190 is therefore inhibition of LOC284719 (Accession XP_211601.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284719.

[31827] LOC284995 (Accession XP_211729.1) is another GAM190 target gene, herein designated TARGET GENE. LOC284995 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284995, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284995 BINDING SITE, designated SEQ ID:17855, to

the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31828] Another function of GAM190 is therefore inhibition of LOC284995 (Accession XP_211729.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284995.

[31829] LOC285009 (Accession XP_209435.1) is another GAM190 target gene, herein designated TARGET GENE. LOC285009 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285009, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285009 BINDING SITE, designated SEQ ID:13385, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31830] Another function of GAM190 is therefore inhibition of LOC285009 (Accession XP_209435.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285009.

[31831] LOC285023 (Accession XP_211737.1) is another GAM190

target gene, herein designated TARGET GENE. LOC285023 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285023, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285023 BINDING SITE, designated SEQ ID:6445, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31832] Another function of GAM190 is therefore inhibition of LOC285023 (Accession XP_211737.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285023.

[31833] LOC285026 (Accession XP_209440.1) is another GAM190 target gene, herein designated TARGET GENE. LOC285026 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285026, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285026 BINDING SITE, designated SEQ ID:4367, to the nucleotide sequence of GAM190 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:289.

[31834] Another function of GAM190 is therefore inhibition of LOC285026 (Accession XP_209440.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285026.

[31835] LOC285402 (Accession XP_211884.1) is another GAM190 target gene, herein designated TARGET GENE. LOC285402 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285402 BINDING SITE, designated SEQ ID:12287, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31836] Another function of GAM190 is therefore inhibition of LOC285402 (Accession XP_211884.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285402.

[31837] LOC285531 (Accession XP_211929.1) is another GAM190 target gene, herein designated TARGET GENE. LOC285531

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285531 BINDING SITE, designated SEQ ID:7733, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31838] Another function of GAM190 is therefore inhibition of LOC285531 (Accession XP_211929.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285531.

[31839] LOC285703 (Accession XP_209728.1) is another GAM190 target gene, herein designated TARGET GENE. LOC285703 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285703, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285703 BINDING SITE, designated SEQ ID:11785, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31840] Another function of GAM190 is therefore inhibition of LOC285703 (Accession XP_209728.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285703.

[31841] LOC285733 (Accession XP_212006.1) is another GAM190 target gene, herein designated TARGET GENE. LOC285733 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285733, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285733 BINDING SITE, designated SEQ ID:12713, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31842] Another function of GAM190 is therefore inhibition of LOC285733 (Accession XP_212006.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285733.

[31843] LOC285945 (Accession XP_212092.1) is another GAM190 target gene, herein designated TARGET GENE. LOC285945 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC285945, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285945 BINDING SITE, designated SEQ ID:1977, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31844] Another function of GAM190 is therefore inhibition of LOC285945 (Accession XP_212092.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285945.

[31845] LOC286030 (Accession XP_209868.1) is another GAM190 target gene, herein designated TARGET GENE. LOC286030 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286030, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286030 BINDING SITE, designated SEQ ID:3883, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31846] Another function of GAM190 is therefore inhibition of

LOC286030 (Accession XP_209868.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286030.

[31847] LOC338616 (Accession XP_294666.1) is another GAM190 target gene, herein designated TARGET GENE. LOC338616 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338616, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338616 BINDING SITE, designated SEQ ID:10009, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31848] Another function of GAM190 is therefore inhibition of LOC338616 (Accession XP_294666.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338616.

[31849] LOC338866 (Accession XP_294736.1) is another GAM190 target gene, herein designated TARGET GENE. LOC338866 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338866, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338866 BINDING SITE, designated SEQ ID:10133, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31850] Another function of GAM190 is therefore inhibition of LOC338866 (Accession XP_294736.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338866.

[31851] LOC339273 (Accession XP_294893.1) is another GAM190 target gene, herein designated TARGET GENE. LOC339273 BINDING SITE1 and LOC339273 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339273, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339273 BINDING SITE1 and LOC339273 BINDING SITE2, designated SEQ ID:7171 and SEQ ID:1143 respectively, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31852] Another function of GAM190 is therefore inhibition of LOC339273 (Accession XP_294893.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339273.

[31853] LOC339545 (Accession XP_290946.1) is another GAM190 target gene, herein designated TARGET GENE. LOC339545 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339545, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339545 BINDING SITE, designated SEQ ID:18173, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31854] Another function of GAM190 is therefore inhibition of LOC339545 (Accession XP_290946.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339545.

[31855] LOC339553 (Accession XP_290949.1) is another GAM190 target gene, herein designated TARGET GENE. LOC339553 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC339553, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339553 BINDING SITE, designated SEQ ID:18173, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31856] Another function of GAM190 is therefore inhibition of LOC339553 (Accession XP_290949.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339553.

[31857] LOC339694 (Accession XP_295035.1) is another GAM190 target gene, herein designated TARGET GENE. LOC339694 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339694, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339694 BINDING SITE, designated SEQ ID:1952, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31858] Another function of GAM190 is therefore inhibition of

LOC339694 (Accession XP_295035.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339694.

[31859] LOC339859 (Accession XP_295088.1) is another GAM190 target gene, herein designated TARGET GENE. LOC339859 BINDING SITE1 and LOC339859 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339859, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339859 BINDING SITE1 and LOC339859 BINDING SITE2, designated SEQ ID:12990 and SEQ ID:15811 respectively, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31860] Another function of GAM190 is therefore inhibition of LOC339859 (Accession XP_295088.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339859.

[31861] LOC339874 (Accession XP_295090.1) is another GAM190 target gene, herein designated TARGET GENE. LOC339874

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339874, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339874 BINDING SITE, designated SEQ ID:1545, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31862] Another function of GAM190 is therefore inhibition of LOC339874 (Accession XP_295090.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339874.

[31863] LOC339987 (Accession XP_295123.1) is another GAM190 target gene, herein designated TARGET GENE. LOC339987 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339987 BINDING SITE, designated SEQ ID:18833, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31864] Another function of GAM190 is therefore inhibition of LOC339987 (Accession XP_295123.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339987.

[31865] LOC348326 (Accession XP_300696.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348326 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348326, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348326 BINDING SITE, designated SEQ ID:18880, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31866] Another function of GAM190 is therefore inhibition of LOC348326 (Accession XP_300696.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348326.

[31867] LOC348445 (Accession XP_300738.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348445 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC348445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348445 BINDING SITE, designated SEQ ID:18880, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31868] Another function of GAM190 is therefore inhibition of LOC348445 (Accession XP_300738.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348445.

[31869] LOC348492 (Accession XP_300758.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348492 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348492, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348492 BINDING SITE, designated SEQ ID:6321, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31870] Another function of GAM190 is therefore inhibition of

LOC348492 (Accession XP_300758.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348492.

[31871] LOC348527 (Accession XP_300779.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348527 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348527 BINDING SITE, designated SEQ ID:19269, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31872] Another function of GAM190 is therefore inhibition of LOC348527 (Accession XP_300779.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348527.

[31873] LOC348570 (Accession XP_290329.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348570 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348570, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348570 BINDING SITE, designated SEQ ID:8957, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31874] Another function of GAM190 is therefore inhibition of LOC348570 (Accession XP_290329.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348570.

[31875] LOC348687 (Accession XP_302853.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348687 BINDING SITE, designated SEQ ID:18314, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31876] Another function of GAM190 is therefore inhibition of LOC348687 (Accession XP_302853.1) . Accordingly, utili-

ties of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348687.

[31877] LOC348808 (Accession XP_302893.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348808 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348808, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348808 BINDING SITE, designated SEQ ID:9714, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31878] Another function of GAM190 is therefore inhibition of LOC348808 (Accession XP_302893.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348808.

[31879] LOC348835 (Accession XP_302902.1) is another GAM190 target gene, herein designated TARGET GENE. LOC348835 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348835, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348835 BINDING SITE, designated SEQ ID:3838, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31880] Another function of GAM190 is therefore inhibition of LOC348835 (Accession XP_302902.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348835.

[31881] LOC349251 (Accession XP_300251.1) is another GAM190 target gene, herein designated TARGET GENE. LOC349251 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349251, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349251 BINDING SITE, designated SEQ ID:13594, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31882] Another function of GAM190 is therefore inhibition of LOC349251 (Accession XP_300251.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC349251.

[31883] LOC349408 (Accession XP_303044.1) is another GAM190 target gene, herein designated TARGET GENE. LOC349408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349408 BINDING SITE, designated SEQ ID:19652, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31884] Another function of GAM190 is therefore inhibition of LOC349408 (Accession XP_303044.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349408.

[31885] LOC51619 (Accession NP_057067.1) is another GAM190 target gene, herein designated TARGET GENE. LOC51619 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51619, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LOC51619 BINDING SITE, designated SEQ ID:4728, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31886] Another function of GAM190 is therefore inhibition of LOC51619 (Accession NP_057067.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51619.

[31887] LOC57209 (Accession XP_290488.1) is another GAM190 target gene, herein designated TARGET GENE. LOC57209 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC57209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC57209 BINDING SITE, designated SEQ ID:19313, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31888] Another function of GAM190 is therefore inhibition of LOC57209 (Accession XP_290488.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC57209.

[31889] LOC65121 (Accession NP_075389.1) is another GAM190 target gene, herein designated TARGET GENE. LOC65121 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC65121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC65121 BINDING SITE, designated SEQ ID:18173, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31890] Another function of GAM190 is therefore inhibition of LOC65121 (Accession NP_075389.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC65121.

[31891] LOC65122 (Accession NP_075390.1) is another GAM190 target gene, herein designated TARGET GENE. LOC65122 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC65122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC65122 BINDING SITE, designated SEQ ID:18173, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31892] Another function of GAM190 is therefore inhibition of LOC65122 (Accession NP_075390.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC65122.

[31893] LOC90170 (Accession XP_029589.1) is another GAM190 target gene, herein designated TARGET GENE. LOC90170 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC90170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90170 BINDING SITE, designated SEQ ID:16015, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31894] Another function of GAM190 is therefore inhibition of LOC90170 (Accession XP_029589.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90170.

[31895] LOC90750 (Accession XP_033868.1) is another GAM190 target gene, herein designated TARGET GENE. LOC90750 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90750, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90750 BINDING SITE, designated SEQ ID:3453, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31896] Another function of GAM190 is therefore inhibition of LOC90750 (Accession XP_033868.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90750.

[31897] LOC91250 (Accession XP_037135.1) is another GAM190 target gene, herein designated TARGET GENE. LOC91250 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91250, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91250 BINDING SITE, designated SEQ ID:4751, to the

nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31898] Another function of GAM190 is therefore inhibition of LOC91250 (Accession XP_037135.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91250.

[31899] LOC92249 (Accession XP_043814.1) is another GAM190 target gene, herein designated TARGET GENE. LOC92249 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92249, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92249 BINDING SITE, designated SEQ ID:14921, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31900] Another function of GAM190 is therefore inhibition of LOC92249 (Accession XP_043814.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92249.

[31901] Low density lipoprotein-related protein 1b (deleted in tu-

mors) (LRP1B, Accession NP_061027.1) is another GAM190 target gene, herein designated TARGET GENE. LRP1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRP1B BINDING SITE, designated SEQ ID:12085, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31902] Another function of GAM190 is therefore inhibition of Low density lipoprotein-related protein 1b (deleted in tumors) (LRP1B, Accession NP_061027.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRP1B.

[31903] Low density lipoprotein receptor-related protein 4 (LRP4, Accession XP_035037.2) is another GAM190 target gene, herein designated TARGET GENE. LRP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRP4 BINDING SITE,

designated SEQ ID:16297, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31904] Another function of GAM190 is therefore inhibition of Low density lipoprotein receptor-related protein 4 (LRP4, Accession XP_035037.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRP4.

[31905] Mitogen-activated protein kinase kinase kinase 13 (MAP3K13, Accession NP_004712.1) is another GAM190 target gene, herein designated TARGET GENE. MAP3K13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAP3K13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP3K13 BINDING SITE, designated SEQ ID:9282, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31906] Another function of GAM190 is therefore inhibition of Mitogen-activated protein kinase kinase kinase 13 (MAP3K13, Accession NP_004712.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MAP3K13.

[31907] MAPKBP1 (Accession XP_031706.7) is another GAM190 target gene, herein designated TARGET GENE. MAPKBP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAPKBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPKBP1 BINDING SITE, designated SEQ ID:2864, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31908] Another function of GAM190 is therefore inhibition of MAPKBP1 (Accession XP_031706.7) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPKBP1.

[31909] Methyl-cpg binding domain protein 4 (MBD4, Accession NP_003916.1) is another GAM190 target gene, herein designated TARGET GENE. MBD4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MBD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MBD4 BINDING SITE, designated SEQ ID:6949, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31910] Another function of GAM190 is therefore inhibition of Methyl-cpg binding domain protein 4 (MBD4, Accession NP_003916.1), a gene which are likely to be mediators of the effects of DNA methylation in mammalian cells. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MBD4.

[31911] The function of MBD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.MGC13053 (Accession NP_116099.1) is another GAM190 target gene, herein designated TARGET GENE. MGC13053 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13053 BINDING SITE, designated SEQ ID:7515, to the nucleotide sequence of

GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31912] Another function of GAM190 is therefore inhibition of MGC13053 (Accession NP_116099.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13053.

[31913] MGC15438 (Accession NP_116263.2) is another GAM190 target gene, herein designated TARGET GENE. MGC15438 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC15438, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15438 BINDING SITE, designated SEQ ID:8619, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31914] Another function of GAM190 is therefore inhibition of MGC15438 (Accession NP_116263.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15438.

[31915] MGC17986 (Accession NP_705836.1) is another GAM190

target gene, herein designated TARGET GENE. MGC17986 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC17986, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17986 BINDING SITE, designated SEQ ID:5825, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31916] Another function of GAM190 is therefore inhibition of MGC17986 (Accession NP_705836.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC17986.

[31917] MGC35304 (Accession NP_694987.1) is another GAM190 target gene, herein designated TARGET GENE. MGC35304 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC35304, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35304 BINDING SITE, designated SEQ ID:17665, to the nucleotide sequence of GAM190 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:289.

[31918] Another function of GAM190 is therefore inhibition of MGC35304 (Accession NP_694987.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35304.

[31919] MGC45714 (Accession NP_689677.1) is another GAM190 target gene, herein designated TARGET GENE. MGC45714 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC45714, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC45714 BINDING SITE, designated SEQ ID:8478, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31920] Another function of GAM190 is therefore inhibition of MGC45714 (Accession NP_689677.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC45714.

[31921] MGC5466 (Accession NP_112184.1) is another GAM190 target gene, herein designated TARGET GENE. MGC5466

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC5466, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5466 BINDING SITE, designated SEQ ID:3145, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31922] Another function of GAM190 is therefore inhibition of MGC5466 (Accession NP_112184.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5466.

[31923] MLC1SA (Accession NP_002466.1) is another GAM190 target gene, herein designated TARGET GENE. MLC1SA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MLC1SA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1SA BINDING SITE, designated SEQ ID:4844, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31924] Another function of GAM190 is therefore inhibition of MLC1SA (Accession NP_002466.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1SA.

[31925] Myelin oligodendrocyte glycoprotein (MOG, Accession NP_002424.1) is another GAM190 target gene, herein designated TARGET GENE. MOG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MOG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOG BINDING SITE, designated SEQ ID:6547, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31926] Another function of GAM190 is therefore inhibition of Myelin oligodendrocyte glycoprotein (MOG, Accession NP_002424.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOG.

[31927] MORF4L2 (Accession NP_036418.1) is another GAM190 target gene, herein designated TARGET GENE. MORF4L2 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MORF4L2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MORF4L2 BINDING SITE, designated SEQ ID:17588, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31928] Another function of GAM190 is therefore inhibition of MORF4L2 (Accession NP_036418.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MORF4L2.

[31929] M-phase phosphoprotein 9 (MPHOSPH9, Accession NP_073619.1) is another GAM190 target gene, herein designated TARGET GENE. MPHOSPH9 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MPHOSPH9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPHOSPH9 BINDING SITE, designated SEQ ID:8003, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31930] Another function of GAM190 is therefore inhibition of M-phase phosphoprotein 9 (MPHOSPH9, Accession NP_073619.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPHOSPH9.

[31931] Male-specific lethal 3-like 1 (drosophila) (MSL3L1, Accession NP_523352.1) is another GAM190 target gene, herein designated TARGET GENE. MSL3L1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MSL3L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSL3L1 BINDING SITE, designated SEQ ID:17050, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31932] Another function of GAM190 is therefore inhibition of Male-specific lethal 3-like 1 (drosophila) (MSL3L1, Accession NP_523352.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSL3L1.

[31933] Metallothionein 1f (functional) (MT1F, Accession NP_005940.1) is another GAM190 target gene, herein

designated TARGET GENE. MT1F BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MT1F, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MT1F BINDING SITE, designated SEQ ID:17234, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31934] Another function of GAM190 is therefore inhibition of Metallothionein 1f (functional) (MT1F, Accession NP_005940.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MT1F.

[31935] Metallothionein 1g (MT1G, Accession NP_005941.1) is another GAM190 target gene, herein designated TARGET GENE. MT1G BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MT1G, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MT1G BINDING SITE, designated SEQ ID:4199, to the nucleotide sequence of GAM190 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:289.

[31936] Another function of GAM190 is therefore inhibition of Metallothionein 1g (MT1G, Accession NP_005941.1), a gene which is active in metal homeostasis and protects against heavy- metal toxicity. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MT1G.

[31937] The function of MT1G has been established by previous studies. See 156350. Karin et al. (1984), West et al. (1990), and others have mapped the locus containing the MT1 gene family to chromosome 16q13. Foster et al. (1988) described the structure of the human MT1G gene. They showed that the MT1G gene promoter is not cell type- specific. However, they also found that, while the gene was expressed in certain hepatoma- derived cell lines in response to heavy metals (but not to dexamethasone), a lymphoblastoid cell line did not express MT1G, suggesting to them that MT1G gene expression is regulated differentially and in a cell- specific manner. They also found that the MT1G promoter is 5 times more active than the MT1F (OMIM Ref. No. 156352) promoter in transient transfection studies.

[31938]

[31939] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31940] Karin, M.; Eddy, R. L.; Henry, W. M.; Haley, L. L.; Byers, M. G.; Shows, T. B. : Human metallothionein genes are clustered on chromosome 16. Proc. Nat. Acad. Sci. 81: 5494-5498, 1984. ; and

[31941] West, A. K.; Stallings, R.; Hildebrand, C. E.; Chiu, R.; Karin, M.; Richards, R. I. : Human metallothionein genes: structure of the functional locus at 16q13. Genomics 8: 513-518, 1990.

[31942] Further studies establishing the function and utilities of MT1G are found in John Hopkins OMIM database record ID 156353, and in cited publications listed in Table 5, which are hereby incorporated by reference.Metallothionein 1h (MT1H, Accession NP_005942.1) is another GAM190 target gene, herein designated TARGET GENE. MT1H BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MT1H, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MT1H BINDING SITE, designated SEQ ID:6444, to the nucleotide se-

quence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31943] Another function of GAM190 is therefore inhibition of Metallothionein 1h (MT1H, Accession NP_005942.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MT1H.

[31944] Metallothionein 1l (MT1L, Accession NP_002441.2) is another GAM190 target gene, herein designated TARGET GENE. MT1L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MT1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MT1L BINDING SITE, designated SEQ ID:17203, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31945] Another function of GAM190 is therefore inhibition of Metallothionein 1l (MT1L, Accession NP_002441.2), a gene which plays a role in zinc and copper homeostasis during development. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MT1L.

[31946] The function of MT1L has been established by previous studies. See 156350. Karin et al. (1984), West et al. (1990), and others have mapped the locus containing the MT1 gene family to chromosome 16q13.

[31947]

[31948] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31949] Karin, M.; Eddy, R. L.; Henry, W. M.; Haley, L. L.; Byers, M. G.; Shows, T. B. : Human metallothionein genes are clustered on chromosome 16. Proc. Nat. Acad. Sci. 81: 5494-5498, 1984. ; and

[31950] West, A. K.; Stallings, R.; Hildebrand, C. E.; Chiu, R.; Karin, M.; Richards, R. I. : Human metallothionein genes: structure of the functional locus at 16q13. Genomics 8: 513-518, 1990.

[31951] Further studies establishing the function and utilities of MT1L are found in John Hopkins OMIM database record ID 156358, and in cited publications listed in Table 5, which are hereby incorporated by reference.Metallothionein 1x (MT1X, Accession NP_005943.1) is another GAM190 target gene, herein designated TARGET GENE. MT1X BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by MT1X, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MT1X BINDING SITE, designated SEQ ID:7997, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31952] Another function of GAM190 is therefore inhibition of Metallothionein 1x (MT1X, Accession NP_005943.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MT1X.

[31953] Myosin viia and rab interacting protein (MYRIP, Accession NP_056275.1) is another GAM190 target gene, herein designated TARGET GENE. MYRIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYRIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYRIP BINDING SITE, designated SEQ ID:14896, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31954] Another function of GAM190 is therefore inhibition of Myosin viia and rab interacting protein (MYRIP, Accession NP_056275.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYRIP.

[31955] NALP2 (Accession NP_060322.1) is another GAM190 target gene, herein designated TARGET GENE. NALP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NALP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NALP2 BINDING SITE, designated SEQ ID:2364, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31956] Another function of GAM190 is therefore inhibition of NALP2 (Accession NP_060322.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NALP2.

[31957] Nck adaptor protein 1 (NCK1, Accession NP_006144.1) is another GAM190 target gene, herein designated TARGET GENE. NCK1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCK1,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCK1 BINDING SITE, designated SEQ ID:17015, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31958] Another function of GAM190 is therefore inhibition of Nck adaptor protein 1 (NCK1, Accession NP_006144.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCK1.

[31959] Nk3 transcription factor related, locus 1 (drosophila) (NKX3-1, Accession NP_006158.2) is another GAM190 target gene, herein designated TARGET GENE. NKX3-1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NKX3-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NKX3-1 BINDING SITE, designated SEQ ID:8119, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31960] Another function of GAM190 is therefore inhibition of Nk3

transcription factor related, locus 1 (drosophila) (NKX3-1, Accession NP_006158.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NKX3-1.

[31961] Neuroligin 1 (NLGN1, Accession NP_055747.1) is another GAM190 target gene, herein designated TARGET GENE. NLGN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NLGN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NLGN1 BINDING SITE, designated SEQ ID:8186, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31962] Another function of GAM190 is therefore inhibition of Neuroligin 1 (NLGN1, Accession NP_055747.1), a gene which may trigger the de novo formation of presynaptic structure. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NLGN1.

[31963] The function of NLGN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM90.1.Notch homolog 1, translocation-associated (drosophila) (NOTCH1, Accession NP_060087.2) is another GAM190 target gene, herein designated TARGET GENE. NOTCH1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOTCH1 BINDING SITE, designated SEQ ID:11588, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31964] Another function of GAM190 is therefore inhibition of Notch homolog 1, translocation-associated (drosophila) (NOTCH1, Accession NP_060087.2), a gene which is possibly involved in cell differentiation and lymphocyte function. and therefore may be associated with Neoplasia, a t-cell acute lymphoblastic leukemia. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of Neoplasia, a t- cell acute lymphoblastic leukemia., and of other diseases and clinical conditions associated with NOTCH1.

[31965] The function of NOTCH1 has been established by previous studies. Cytogenetic studies have shown that chromo-

some 7 band q34- q35, which contains the gene for the beta T- cell receptor (OMIM Ref. No. 186930), is a common site for translocation in T- cell neoplasms. In a translocation t(7;9)(q34;q34.3) found in a case of acute T-cell lymphoblastic leukemia, Ellisen et al. (1991) found that the locus on chromosome 9 contains a gene highly homologous to the Drosophila gene 'Notch.' Transcripts of the human gene, for which they proposed the name TAN1 (an acronym for translocation- associated Notch homolog), and its murine counterpart were demonstrated in many normal human fetal and adult mouse tissues but were most abundant in lymphoid tissues. In t(7;9)(q34;q34.3) translocations from 3 cases of acute T-cell lymphoblastic leukemia, Ellisen et al. (1991) found breakpoints within 100 bp of an intron in TAN1, resulting in truncation of TAN1 transcripts. They interpreted the observations to indicate that TAN1 is important for normal lymphocyte function and that alterations in TAN1 play a role in the pathogenesis of some T- cell neoplasms. Milner et al. (1994) found that at least 1 Notch homolog is expressed in human bone marrow CD34+ cells, a population enriched for hematopoietic precursors. On the basis of these findings, they suggested that members of the

Notch family, including TAN1, may be involved in mediating cell- fate decisions during hematopoiesis.

[31966] Animal model experiments lend further support to the function of NOTCH1. Huppert et al. (2000) mutated valine at position 1744 of the mouse Notch1 gene to glycine. This position is the site for proteolytic cleavage and is critical for Notch1 intracellular processing in tissue- culture cells. Huppert et al. (2000) generated homozygous animals carrying 2 germline mutations and compared these with mice who have 2 null alleles for Notch1 (Conlon et al., 1995). At embryonic day 8.5 to 10.5, homozygous embryos were detected at the expected mendelian frequency. Similar to the null alleles, embryo absorption was detected between embryonic day 10 and 12, and no homozygous embryos were recovered past embryonic day 12. These results suggested that efficient Notch processing is necessary for the early embryonic developmental aspects of Notch activity. RT- PCR and immunoprecipitation showed comparable amounts of Notch mRNA and protein, respectively, in the processing- deficient embryos and their heterozygous and wildtype littermates. The phenotypes associated with the single point mutation resembled the null Notch1 phenotype, but with slightly reduced

penetrance.

[31967] It is appreciated that the abovementioned animal model for NOTCH1 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[31968] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31969] Ellisen, L. W.; Bird, J.; West, D. C.; Soreng, A. L.; Reynolds, T. C.; Smith, S. D.; Sklar, J. : TAN- 1, the human homolog of the Drosophila Notch gene, is broken by chromosomal translocations in T lymphoblastic neoplasms. Cell 66: 649- 661, 1991. ; and

[31970] Huppert, S. S.; Le, A.; Schroeter, E. H.; Mumm, J. S.; Saxena, M. T.; Milner, L. A.; Kopan, R. : Embryonic lethality in mice homozygous for a processing- deficient allele of Notch1. Natu.

[31971] Further studies establishing the function and utilities of NOTCH1 are found in John Hopkins OMIM database record ID 190198, and in cited publications listed in Table 5, which are hereby incorporated by reference.Nadph oxidase 1 (NOX1, Accession NP_039249.1) is another GAM190 target gene, herein designated TARGET GENE.

NOX1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by NOX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOX1 BINDING SITE, designated SEQ ID:8938, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31972] Another function of GAM190 is therefore inhibition of Nadph oxidase 1 (NOX1, Accession NP_039249.1), a gene which mediates the h+ currents of resting phagocytes and other tissues. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOX1.

[31973] The function of NOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Nadph oxidase 1 (NOX1, Accession NP_039248.1) is another GAM190 target gene, herein designated TARGET GENE. NOX1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by NOX1, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOX1 BINDING SITE, designated SEQ ID:8938, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31974] Another function of GAM190 is therefore inhibition of Nadph oxidase 1 (NOX1, Accession NP_039248.1), a gene which mediates the h+ currents of resting phagocytes and other tissues. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOX1.

[31975] The function of NOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Nadph oxidase 1 (NOX1, Accession NP_008983.1) is another GAM190 target gene, herein designated TARGET GENE. NOX1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by NOX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOX1 BINDING SITE, designated SEQ ID:8938, to the nucleotide

sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31976] Another function of GAM190 is therefore inhibition of Nadph oxidase 1 (NOX1, Accession NP_008983.1), a gene which mediates the h+ currents of resting phagocytes and other tissues. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOX1.

[31977] The function of NOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Neuronal pentraxin ii (NPTX2, Accession NP_002514.1) is another GAM190 target gene, herein designated TARGET GENE. NPTX2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPTX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTX2 BINDING SITE, designated SEQ ID:4797, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31978] Another function of GAM190 is therefore inhibition of Neuronal pentraxin ii (NPTX2, Accession NP_002514.1), a

gene which is likely to play role in the modification of cellular properties that underlie long- term plasticity. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTX2.

[31979] The function of NPTX2 has been established by previous studies. Pentraxins constitute a family of proteins that include C- reactive protein (CRP; 123260) and serum amyloid P protein (APCS; 104770). Hsu and Perin (1995) noted that the prototypic pentraxin, C- reactive protein, was first identified as a serum component that binds Streptococcus pneumoniae (Tillett and Francis, 1930 and Abernethy and Avery, 1941) and whose serum concentration increases up to 1,000- fold during an acute phase response. Pentraxins acquired their name from their ability to form pentameric (or decameric) complexes and have been characterized by their ability to bind numerous ligands. The latter property raises the possibility that these proteins may mediate a nonspecific uptake of bacteria and cell debris that may be associated with inflammation and immune responses. Schlimgen et al. (1995) identified a novel neuronal pentraxin in rat as a potential receptor mediating the uptake of the presynaptic snake venom

toxin taipoxin (see OMIM Ref. No. NPTX1, 602367). Based on the low identity to other pentraxins and the hypothesis that this neuronal pentraxin may mediate uptake of degraded synaptic material, Hsu and Perin (1995) sought to identify additional members of what they suspected represents a new family of pentraxins. They reported the cDNA and genomic sequences of a second neuronal pentraxin in humans, for which they proposed the name neuronal pentraxin II (NPTX2). They found that it shows 54% amino acid identity to rat neuronal pentraxin I, with 69% identity over the carboxy- terminal half of NP I, and is 88% identical to a sperm acrosomal pentraxin. Northern blot analysis demonstrated that NPTX2 message is present in brain, testis, pancreas, liver, heart, and skeletal muscle; thus, unlike NP I, NP II is not exclusively localized to neurons. Like NP I, NP II has potential N- linked glycosylation sites. The human NPTX2 gene is 11 kb long and contains 4 introns. By fluorescence in situ hybridization, Hsu and Perin (1995) mapped the NPTX2 gene to 7q21.3- q22.1.

[31980]

[31981] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31982] Hsu, Y.- C.; Perin, M. S. : Human neuronal pentraxin II (NPTX2): conservation, genomic structure, and chromosomal localization. Genomics 28: 220- 227, 1995. ; and

[31983] Schlimgen, A. K.; Helms, J. A.; Vogel, H.; Perin, M. S. : Neuronal pentraxin, a secreted protein with homology to acute phase proteins of the immune system. Neuron 14: 519- 526, 1995.

[31984] Further studies establishing the function and utilities of NPTX2 are found in John Hopkins OMIM database record ID 600750, and in cited publications listed in Table 5, which are hereby incorporated by reference.Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) is another GAM190 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:13368, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31985] Another function of GAM190 is therefore inhibition of

Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[31986] Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) is another GAM190 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:13368, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31987] Another function of GAM190 is therefore inhibition of Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[31988] Neuregulin 1 (NRG1, Accession NP_039252.1) is another GAM190 target gene, herein designated TARGET GENE. NRG1 BINDING SITE is a target binding site found in the 3`

untranslated region of multiple transcripts of mRNA encoded by NRG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRG1 BINDING SITE, designated SEQ ID:17541, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31989] Another function of GAM190 is therefore inhibition of Neuregulin 1 (NRG1, Accession NP_039252.1), a gene which is essential for neuronal development. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRG1.

[31990] The function of NRG1 has been established by previous studies. The NEU/ERBB2 protooncogene (OMIM Ref. No. 164870) encodes a molecule that is closely related to epidermal growth factor receptor (EGFR; 131550) but binds none of the ligands of this receptor. Originally, NEU was identified as a dominant transforming gene in tumors of the peripheral nervous system that were induced by transplacental treatment of rat embryos with N- ethylnitrosourea. The period of susceptibility of NEU to carcino-

genesis, i.e., midgestation, correlated with the timing of its expression in the nervous system. The existence of a NEU- specific ligand of endogenous nature activating NEU at a specific developmental stage was suggested. This ligand, known as heregulin (Holmes et al., 1992) or NEU differentiation factor, is a 44- kD glycoprotein that interacts with the NEU/ERBB2 receptor tyrosine kinase to increase its phosphorylation on tyrosine residues. Splice variants of heregulin, referred to as heregulin betas, have been described by Holmes et al. (1992).

[31991] Animal model experiments lend further support to the function of NRG1. Mice homozygous for disruptions of all NRG1 isoforms, all Ig- NRG1 isoforms, and all cytoplasmic tail- containing isoforms die at embryonic day 10.5 from cardiac defects. In particular, these mice die before significant expression of CRD- NRG1 isoforms, which predominate after midgestation. By histologic analyses, Wolpowitz et al. (2000) found that homozygous CRD- NRG1- deficient mice had normal neuronal trajectory and outgrowth, but that the projections defasciculated, branched abnormally, and failed to sustain peripheral neuromuscular synaptic development. Newborn mutants had immature skeletal muscle. Schwann cells were generated in the mu-

tants but failed to survive, consistent with the designation of NRG1 as a Schwann cell survival factor. Schwann cells in turn appeared to provide trophic support only after the nerve had entered its target field and had begun synapse formation.

[31992] It is appreciated that the abovementioned animal model for NRG1 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[31993] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[31994] Holmes, W. E.; Sliwkowski, M. X.; Akita, R. W.; Henzel, W. J.; Lee, J.; Park, J. W.; Yansura, D.; Abadi, N.; Raab, H.; Lewis, G. D.; Shepard, H. M.; Kuang, W.- J.; Wood, W. I.; Goeddel, D. V.; Vandlen, R. L. : Identification of heregulin, a specific activator of p185(erbB2). Science 256: 1205-1210, 1992. ; and

[31995] Wolpowitz, D.; Mason, T. B. A.; Dietrich, P.; Mendelsohn, M.; Talmage, D. A.; Role, L. W. : Cysteine- rich domain isoforms of the neuregulin- 1 gene are required for maintenance of periph.

[31996] Further studies establishing the function and utilities of

NRG1 are found in John Hopkins OMIM database record ID 142445, and in cited publications listed in Table 5, which are hereby incorporated by reference.Neuregulin 1 (NRG1, Accession NP_039256.1) is another GAM190 target gene, herein designated TARGET GENE. NRG1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NRG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRG1 BINDING SITE, designated SEQ ID:17541, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[31997] Another function of GAM190 is therefore inhibition of Neuregulin 1 (NRG1, Accession NP_039256.1), a gene which is essential for neuronal development. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRG1.

[31998] The function of NRG1 has been established by previous studies. The NEU/ERBB2 protooncogene (OMIM Ref. No. 164870) encodes a molecule that is closely related to epidermal growth factor receptor (EGFR; 131550) but binds

none of the ligands of this receptor. Originally, NEU was identified as a dominant transforming gene in tumors of the peripheral nervous system that were induced by transplacental treatment of rat embryos with N- ethylnitrosourea. The period of susceptibility of NEU to carcinogenesis, i.e., midgestation, correlated with the timing of its expression in the nervous system. The existence of a NEU- specific ligand of endogenous nature activating NEU at a specific developmental stage was suggested. This ligand, known as heregulin (Holmes et al., 1992) or NEU differentiation factor, is a 44- kD glycoprotein that interacts with the NEU/ERBB2 receptor tyrosine kinase to increase its phosphorylation on tyrosine residues. Splice variants of heregulin, referred to as heregulin betas, have been described by Holmes et al. (1992).

[31999] Animal model experiments lend further support to the function of NRG1. Mice homozygous for disruptions of all NRG1 isoforms, all Ig- NRG1 isoforms, and all cytoplasmic tail- containing isoforms die at embryonic day 10.5 from cardiac defects. In particular, these mice die before significant expression of CRD- NRG1 isoforms, which predominate after midgestation. By histologic analyses, Wolpowitz et al. (2000) found that homozygous CRD- NRG1- defi-

cient mice had normal neuronal trajectory and outgrowth, but that the projections defasciculated, branched abnormally, and failed to sustain peripheral neuromuscular synaptic development. Newborn mutants had immature skeletal muscle. Schwann cells were generated in the mutants but failed to survive, consistent with the designation of NRG1 as a Schwann cell survival factor. Schwann cells in turn appeared to provide trophic support only after the nerve had entered its target field and had begun synapse formation.

[32000] It is appreciated that the abovementioned animal model for NRG1 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[32001] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32002] Holmes, W. E.; Sliwkowski, M. X.; Akita, R. W.; Henzel, W. J.; Lee, J.; Park, J. W.; Yansura, D.; Abadi, N.; Raab, H.; Lewis, G. D.; Shepard, H. M.; Kuang, W.- J.; Wood, W. I.; Goeddel, D. V.; Vandlen, R. L. : Identification of heregulin, a specific activator of p185(erbB2). Science 256: 1205-1210, 1992. ; and

[32003] Wolpowitz, D.; Mason, T. B. A.; Dietrich, P.; Mendelsohn, M.; Talmage, D. A.; Role, L. W. : Cysteine- rich domain isoforms of the neuregulin- 1 gene are required for maintenance of periph.

[32004] Further studies establishing the function and utilities of NRG1 are found in John Hopkins OMIM database record ID 142445, and in cited publications listed in Table 5, which are hereby incorporated by reference.Neuregulin 1 (NRG1, Accession NP_039253.1) is another GAM190 target gene, herein designated TARGET GENE. NRG1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NRG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRG1 BINDING SITE, designated SEQ ID:17541, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32005] Another function of GAM190 is therefore inhibition of Neuregulin 1 (NRG1, Accession NP_039253.1), a gene which is essential for neuronal development. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with NRG1.

[32006] The function of NRG1 has been established by previous studies. The NEU/ERBB2 protooncogene (OMIM Ref. No. 164870) encodes a molecule that is closely related to epidermal growth factor receptor (EGFR; 131550) but binds none of the ligands of this receptor. Originally, NEU was identified as a dominant transforming gene in tumors of the peripheral nervous system that were induced by transplacental treatment of rat embryos with N- ethylnitrosourea. The period of susceptibility of NEU to carcinogenesis, i.e., midgestation, correlated with the timing of its expression in the nervous system. The existence of a NEU- specific ligand of endogenous nature activating NEU at a specific developmental stage was suggested. This ligand, known as heregulin (Holmes et al., 1992) or NEU differentiation factor, is a 44- kD glycoprotein that interacts with the NEU/ERBB2 receptor tyrosine kinase to increase its phosphorylation on tyrosine residues. Splice variants of heregulin, referred to as heregulin betas, have been described by Holmes et al. (1992).

[32007] Animal model experiments lend further support to the function of NRG1. Mice homozygous for disruptions of all NRG1 isoforms, all Ig- NRG1 isoforms, and all cytoplasmic

tail- containing isoforms die at embryonic day 10.5 from cardiac defects. In particular, these mice die before significant expression of CRD- NRG1 isoforms, which predominate after midgestation. By histologic analyses, Wolpowitz et al. (2000) found that homozygous CRD- NRG1- deficient mice had normal neuronal trajectory and outgrowth, but that the projections defasciculated, branched abnormally, and failed to sustain peripheral neuromuscular synaptic development. Newborn mutants had immature skeletal muscle. Schwann cells were generated in the mutants but failed to survive, consistent with the designation of NRG1 as a Schwann cell survival factor. Schwann cells in turn appeared to provide trophic support only after the nerve had entered its target field and had begun synapse formation.

[32008] It is appreciated that the abovementioned animal model for NRG1 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[32009] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32010] Holmes, W. E.; Sliwkowski, M. X.; Akita, R. W.; Henzel, W.

J.; Lee, J.; Park, J. W.; Yansura, D.; Abadi, N.; Raab, H.; Lewis, G. D.; Shepard, H. M.; Kuang, W.- J.; Wood, W. I.; Goeddel, D. V.; Vandlen, R. L. : Identification of heregulin, a specific activator of p185(erbB2). Science 256: 1205-1210, 1992. ; and

[32011] Wolpowitz, D.; Mason, T. B. A.; Dietrich, P.; Mendelsohn, M.; Talmage, D. A.; Role, L. W. : Cysteine- rich domain isoforms of the neuregulin- 1 gene are required for maintenance of periph.

[32012] Further studies establishing the function and utilities of NRG1 are found in John Hopkins OMIM database record ID 142445, and in cited publications listed in Table 5, which are hereby incorporated by reference.Neurexin 3 (NRXN3, Accession NP_004787.2) is another GAM190 target gene, herein designated TARGET GENE. NRXN3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NRXN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRXN3 BINDING SITE, designated SEQ ID:14089, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32013] Another function of GAM190 is therefore inhibition of Neurexin 3 (NRXN3, Accession NP_004787.2), a gene which may be involved in cell recognition, cell adhesion, and mediate intracellular signaling. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRXN3.

[32014] The function of NRXN3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Neurexin 3 (NRXN3, Accession NP_620426.1) is another GAM190 target gene, herein designated TARGET GENE. NRXN3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NRXN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRXN3 BINDING SITE, designated SEQ ID:14089, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32015] Another function of GAM190 is therefore inhibition of Neurexin 3 (NRXN3, Accession NP_620426.1), a gene which may be involved in cell recognition, cell adhesion,

and mediate intracellular signaling. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRXN3.

[32016] The function of NRXN3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Oxidised low density lipoprotein (lectin-like) receptor 1 (OLR1, Accession NP_002534.1) is another GAM190 target gene, herein designated TARGET GENE. OLR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OLR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OLR1 BINDING SITE, designated SEQ ID:2011, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32017] Another function of GAM190 is therefore inhibition of Oxidised low density lipoprotein (lectin-like) receptor 1 (OLR1, Accession NP_002534.1), a gene which is involved in degradation of oxidized LDL by vascular endothelial cells. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with OLR1.

[32018] The function of OLR1 has been established by previous studies. Endothelial cell dysfunction or activation elicited by oxidatively modified low density lipoprotein (OMIM Ref. No. Ox- LDL) has been implicated in the pathogenesis of atherosclerosis. Vascular endothelial cells internalize and degrade Ox- LDL through a putative receptor- mediated pathway that does not involve macrophage scavenger receptors (see OMIM Ref. No. MSR1; 153622). To identify genes encoding Ox- LDL receptors, Sawamura et al. (1997) transfected mammalian cells with a cDNA expression library derived from bovine aortic endothelial cells and assayed for uptake of labeled Ox- LDL. They recovered a cDNA encoding an Ox- LDL receptor, which they designated lectin- like Ox- LDL receptor- 1 (LOX1). Immunofluorescence studies showed that bovine LOX1 is expressed on the cell surface. Sawamura et al. (1997) cloned a cDNA encoding the human homolog of LOX1 by screening a human lung cDNA library with the bovine LOX1 cDNA. Cells stably expressing human LOX1 showed uptake of labeled Ox- LDL. The predicted 273- amino acid human LOX1 protein is 72% identical to bovine LOX1. Its structure is similar to that of C- type lectins such as

CD94 (KLRD1) and NKR- P1 (KLRB1). Northern blot analysis revealed that human LOX1 is expressed as a 2.8- kb mRNA in various tissues, with the most abundant expression in placenta. Yamanaka et al. (1998) determined that LOX1 is expressed in vascular- rich organs but not in lymphocytes. Yamanaka et al. (1998) found that the LOX1 gene spans approximately 15 kb and consists of 6 exons. By fluorescence in situ hybridization, they mapped the gene to 12p12- p13, where genes of the natural killer cell receptors are clustered.

[32019]

[32020] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32021] Sawamura, T.; Kume, N.; Aoyama, T.; Moriwaki, H.; Hoshikawa, H.; Aiba, Y.; Tanaka, T.; Miwa, S.; Katsura, Y.; Kita, T.; Masaki, T. : An endothelial receptor for oxidized low- density lipoprotein. Nature 386: 73- 77, 1997. ; and

[32023] Further studies establishing the function and utilities of

OLR1 are found in John Hopkins OMIM database record ID 602601, and in cited publications listed in Table 5, which are hereby incorporated by reference.Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663162.1) is another GAM190 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:18511, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32024] Another function of GAM190 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663162.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[32025] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_056365.1) is another GAM190 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:18511, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32026] Another function of GAM190 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_056365.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[32027] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663161.1) is another GAM190 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:18511, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32028] Another function of GAM190 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663161.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[32029] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663164.1) is another GAM190 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:18511, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32030] Another function of GAM190 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663164.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[32031] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663160.1) is another GAM190 target gene, herein

designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:18511, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32032] Another function of GAM190 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663160.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[32033] Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663163.1) is another GAM190 target gene, herein designated TARGET GENE. OSBPL3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL3 BINDING SITE, designated SEQ ID:18511, to the nu-

cleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32034] Another function of GAM190 is therefore inhibition of Oxysterol binding protein-like 3 (OSBPL3, Accession NP_663163.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL3.

[32035] Peptidyl arginine deiminase, type iii (PADI3, Accession NP_057317.1) is another GAM190 target gene, herein designated TARGET GENE. PADI3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PADI3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PADI3 BINDING SITE, designated SEQ ID:16411, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32036] Another function of GAM190 is therefore inhibition of Peptidyl arginine deiminase, type iii (PADI3, Accession NP_057317.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PADI3.

[32037] Putative homeodomain transcription factor 2 (PHTF2, Accession NP_065165.1) is another GAM190 target gene, herein designated TARGET GENE. PHTF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PHTF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHTF2 BINDING SITE, designated SEQ ID:13802, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32038] Another function of GAM190 is therefore inhibition of Putative homeodomain transcription factor 2 (PHTF2, Accession NP_065165.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHTF2.

[32039] POLR3D (Accession NP_001713.1) is another GAM190 target gene, herein designated TARGET GENE. POLR3D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLR3D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLR3D

BINDING SITE, designated SEQ ID:17860, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32040] Another function of GAM190 is therefore inhibition of POLR3D (Accession NP_001713.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLR3D.

[32041] Peptidylprolyl isomerase a (cyclophilin a) (PPIA, Accession NP_066953.1) is another GAM190 target gene, herein designated TARGET GENE. PPIA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPIA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPIA BINDING SITE, designated SEQ ID:8957, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32042] Another function of GAM190 is therefore inhibition of Peptidylprolyl isomerase a (cyclophilin a) (PPIA, Accession NP_066953.1), a gene which is involved in protein folding and/or intracellular protein transport. Accordingly, utilities of GAM190 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with PPIA.

[32043] The function of PPIA has been established by previous studies. Cyclophilin is a specific high- affinity binding protein for the immunosuppressant agent cyclosporin A. Because of its dramatic effects on decreasing morbidity and increasing survival rates in human transplants, the molecular mechanism of immunosuppression by cyclosporin A has been a matter of much interest. Liu et al. (1990) cloned human cDNA for T- cell CYPH and constructed an expression vector under control of the tac promoter for efficient expression in E. coli. Cyclophilin A (also designated peptidyl- prolyl cis/trans isomerase A or PPIA) is a member of the immunophilin class of proteins that all possess peptidyl- prolyl cis/trans isomerase activity and, therefore, are believed to be involved in protein folding and/or intracellular protein transport. Luban et al. (1993) showed that cyclophilin A binds to the gag protein of human immunodeficiency virus type 1 (HIV- 1). This interaction can be inhibited by the immunosuppressant cyclosporin A and also by nonimmunosuppressive, cyclophilin A- binding cyclosporin A derivatives, which were also shown to exhibit potent anti- HIV- 1 activity. Thus,

cyclophilin A may have an essential function in HIV- 1 replication. Using a panel of somatic rodent/human cell hybrids and PCR technology, Willenbrink et al. (1995) mapped the cyclophilin gene (designated PPIA) on chromosome 7 and 4 pseudogenes (PPIP2, PPIP3, PPIP4, and PPIP6) to chromosomes 14, 10, 18, and 3, respectively. Using chromosome 7 and chromosome 10 deletion hybrid panels, they further localized the PPIA coding gene to 7p13- p11.2, as confirmed by fluorescence in situ hybridization (FISH) analysis, and a pseudogene (PPIP3) to the region 10q11.2- q23. Braaten et al. (1996) mapped the PPIA gene to 7p13 by FISH.

[32044]

[32045] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32046] Liu, J.; Albers, M. W.; Chen, C.- M.; Schreiber, S. L.; Walsh, C. T. : Cloning, expression, and purification of human cyclophilin in Escherichia coli and assessment of the catalytic role of cysteines by site- directed mutagenesis. Proc. Nat. Acad. Sci. 87: 2304- 2308, 1990. ; and

[32047] Willenbrink, W.; Halaschek, J.; Schuffenhauer, S.; Kunz, J.; Steinkasserer, A. : Cyclophilin A, the major intracellular

receptor for the immunosuppressant cyclosporin A, maps to chromosome.

[32048] Further studies establishing the function and utilities of PPIA are found in John Hopkins OMIM database record ID 123840, and in cited publications listed in Table 5, which are hereby incorporated by reference.Proteasome (prosome, macropain) 26s subunit, non-atpase, 5 (PSMD5, Accession NP_005038.1) is another GAM190 target gene, herein designated TARGET GENE. PSMD5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSMD5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSMD5 BINDING SITE, designated SEQ ID:8408, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32049] Another function of GAM190 is therefore inhibition of Proteasome (prosome, macropain) 26s subunit, non-atpase, 5 (PSMD5, Accession NP_005038.1), a gene which is the non- ATPase subunit 5 of the 26S proteasome (prosome macropain). Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with PSMD5.

[32050] The function of PSMD5 has been established by previous studies. The covalent attachment of ubiquitin to proteins produces substrates for the 26S ATP- dependent protease. This enzyme is composed of the multicatalytic protease, or proteasome, and a regulatory ATPase complex. Both the multicatalytic protease and the regulatory complex are multisubunit structures that associate in the presence of ATP to form the 26S enzyme. Deveraux et al. (1994) identified a 50- kD subunit of the regulatory complex, which they called subunit 5 (S5) based upon its relative mobility on SDS- polyacrylamide gels. Deveraux et al. (1995) demonstrated that 2 distinct subunits of the 26S protease migrate as 50- kD proteins, and thus, S5 represents 2 proteins, which the authors termed S5A (PSMD4; 601648) and S5B, also called PSMD5. Deveraux et al. (1995) sequenced peptides from the PSMD5 subunit of the human red blood cell 26S protease. Using the amino acid sequence, they isolated human cDNAs comprising a full-length PSMD5 cDNA. The deduced 505- amino acid PSMD5 protein is enriched in leucine residues, particularly in the N- terminal region. PSMD5 contains 9 dileucine repeats and a sequence, NPNY, similar to the tyrosine-

based motifs. Dileucine repeats and tyrosine- based motifs are thought to contribute to internalization and/or targeting. PSMD5 has a calculated molecular mass of 56 kD and focuses at pH 5.3 on 2- dimensional gels. Recombinant PSMD5 did not bind to ubiquitin polymers. By sequencing cDNAs randomly selected from a cDNA library derived from a human immature myeloid cell line, Nomura et al. (1994) isolated a partial cDNA encoding PSMD5, which they called KIAA0072. Northern blot analysis detected PSMD5 expression in a wide variety of human tissues, with the highest expression in lung and skeletal muscle. Deveraux et al. (1995) noted that the nucleotide sequence of the KIAA0072 cDNA is identical to the corresponding nucleotide sequence of the S5B cDNA.

[32051]

[32052] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32053] Deveraux, Q.; Jensen, C.; Rechsteiner, M. : Molecular cloning and expression of a 26 S protease subunit enriched in dileucine repeats. J. Biol. Chem. 270: 23726-23729, 1995. ; and

[32054] Deveraux, Q.; Ustrell, V.; Pickart, C.; Rechsteiner, M. : A 26

S protease subunit that binds ubiquitin conjugates. J. Biol. Chem. 269: 7059- 7061, 1994.

[32055] Further studies establishing the function and utilities of PSMD5 are found in John Hopkins OMIM database record ID 604452, and in cited publications listed in Table 5, which are hereby incorporated by reference.Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_542158.1) is another GAM190 target gene, herein designated TARGET GENE. PTGS1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTGS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGS1 BINDING SITE, designated SEQ ID:9441, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32056] Another function of GAM190 is therefore inhibition of Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_542158.1), a gene which may play an important role in regulating or promoting cell proliferation in some normal

and neoplastically transformed cells. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGS1.

[32057] The function of PTGS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_000953.2) is another GAM190 target gene, herein designated TARGET GENE. PTGS1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTGS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGS1 BINDING SITE, designated SEQ ID:9441, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32058] Another function of GAM190 is therefore inhibition of Prostaglandin-endoperoxide synthase 1 (prostaglandin g/h synthase and cyclooxygenase) (PTGS1, Accession NP_000953.2), a gene which may play an important role in regulating or promoting cell proliferation in some normal

and neoplastically transformed cells. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGS1.

[32059] The function of PTGS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Arginine-glutamic acid dipeptide (re) repeats (RERE, Accession NP_036234.2) is another GAM190 target gene, herein designated TARGET GENE. RERE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RERE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RERE BINDING SITE, designated SEQ ID:16468, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32060] Another function of GAM190 is therefore inhibition of Arginine-glutamic acid dipeptide (re) repeats (RERE, Accession NP_036234.2), a gene which binds DRPLA and locates in the nucleus and therefore may be associated with Dentatorubral- pallidoluysian atrophy. Accordingly, utilities of GAM190 include diagnosis, prevention and treat-

ment of Dentatorubral- pallidoluysian atrophy, and of other diseases and clinical conditions associated with RERE.

[32061] The function of RERE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Regulating synaptic membrane exocytosis 2 (RIMS2, Accession NP_055492.1) is another GAM190 target gene, herein designated TARGET GENE. RIMS2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RIMS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RIMS2 BINDING SITE, designated SEQ ID:14112, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32062] Another function of GAM190 is therefore inhibition of Regulating synaptic membrane exocytosis 2 (RIMS2, Accession NP_055492.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RIMS2.

[32063] SEMA6D (Accession NP_705872.1) is another GAM190 tar-

get gene, herein designated TARGET GENE. SEMA6D BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SEMA6D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEMA6D BINDING SITE, designated SEQ ID:13936, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32064] Another function of GAM190 is therefore inhibition of SEMA6D (Accession NP_705872.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA6D.

[32065] Solute carrier family 9 (sodium/hydrogen exchanger), isoform 1 (antiporter, na+/h+, amiloride sensitive) (SLC9A1, Accession NP_003038.2) is another GAM190 target gene, herein designated TARGET GENE. SLC9A1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC9A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of SLC9A1 BINDING SITE, designated SEQ ID:7514, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32066] Another function of GAM190 is therefore inhibition of Solute carrier family 9 (sodium/hydrogen exchanger), isoform 1 (antiporter, na+/h+, amiloride sensitive) (SLC9A1, Accession NP_003038.2), a gene which is involved in ph regulation to eliminate acids generated by active metabolism or to counter adverse environmental conditions. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC9A1.

[32067] The function of SLC9A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.SNX24 (Accession NP_054754.1) is another GAM190 target gene, herein designated TARGET GENE. SNX24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNX24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of SNX24 BINDING SITE, designated SEQ ID:12825, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32068] Another function of GAM190 is therefore inhibition of SNX24 (Accession NP_054754.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX24.

[32069] Suppressor of cytokine signaling 1 (SOCS1, Accession NP_003736.1) is another GAM190 target gene, herein designated TARGET GENE. SOCS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SOCS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SOCS1 BINDING SITE, designated SEQ ID:10166, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32070] Another function of GAM190 is therefore inhibition of Suppressor of cytokine signaling 1 (SOCS1, Accession NP_003736.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SOCS1.

[32071] Spondin 1, (f-spondin) extracellular matrix protein (SPON1, Accession NP_006099.1) is another GAM190 target gene, herein designated TARGET GENE. SPON1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPON1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPON1 BINDING SITE, designated SEQ ID:13425, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32072] Another function of GAM190 is therefore inhibition of Spondin 1, (f-spondin) extracellular matrix protein (SPON1, Accession NP_006099.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPON1.

[32073] Sprouty homolog 3 (drosophila) (SPRY3, Accession NP_005831.1) is another GAM190 target gene, herein designated TARGET GENE. SPRY3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPRY3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of SPRY3 BINDING SITE, designated SEQ ID:14598, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32074] Another function of GAM190 is therefore inhibition of Sprouty homolog 3 (drosophila) (SPRY3, Accession NP_005831.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPRY3.

[32075] SSH-3 (Accession NP_060746.2) is another GAM190 target gene, herein designated TARGET GENE. SSH-3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SSH-3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SSH-3 BINDING SITE, designated SEQ ID:17604, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32076] Another function of GAM190 is therefore inhibition of SSH-3 (Accession NP_060746.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSH-3.

[32077] SSH-3 (Accession NP_060327.2) is another GAM190 target gene, herein designated TARGET GENE. SSH-3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SSH-3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SSH-3 BINDING SITE, designated SEQ ID:17604, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32078] Another function of GAM190 is therefore inhibition of SSH-3 (Accession NP_060327.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SSH-3.

[32079] Suppressor of fused homolog (drosophila) (SUFU, Accession NP_057253.2) is another GAM190 target gene, herein designated TARGET GENE. SUFU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SUFU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SUFU BINDING SITE, designated SEQ ID:12371, to the nucleotide sequence of GAM190

RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32080] Another function of GAM190 is therefore inhibition of Suppressor of fused homolog (drosophila) (SUFU, Accession NP_057253.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUFU.

[32081] Srb7 suppressor of rna polymerase b homolog (yeast) (SURB7, Accession NP_004255.2) is another GAM190 target gene, herein designated TARGET GENE. SURB7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SURB7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SURB7 BINDING SITE, designated SEQ ID:3571, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32082] Another function of GAM190 is therefore inhibition of Srb7 suppressor of rna polymerase b homolog (yeast) (SURB7, Accession NP_004255.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SURB7.

[32083] SUV39H2 (Accession NP_078946.1) is another GAM190 target gene, herein designated TARGET GENE. SUV39H2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SUV39H2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SUV39H2 BINDING SITE, designated SEQ ID:3837, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32084] Another function of GAM190 is therefore inhibition of SUV39H2 (Accession NP_078946.1), a gene which is involved in gene repression and the modification of position- effect- variegation. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SUV39H2.

[32085] The function of SUV39H2 has been established by previous studies. O'Carroll et al. (2000) isolated and characterized a murine gene, Suv39h2, that encodes an H3 histone (see OMIM Ref. No. 601128) methyltransferase (OMIM Ref. No. HMTase) with 59% identity to Suv39h1 (OMIM Ref. No. 300254). Although both Suv39h loci displayed overlapping expression profiles during mouse embryogenesis,

Suv39h2 transcripts remained specifically expressed in adult testes. Immunolocalization of the Suv39h2 protein during spermatogenesis indicated enriched distribution at the heterochromatin from the leptotene to the round spermatid stage. Moreover, Suv39h2 specifically accumulated with chromatin of the sex chromosomes (XY body), which undergo transcriptional silencing during the first meiotic prophase. These data were consistent with redundant enzymatic roles for Suv39h1 and Suv39h2 during mouse development and suggested an additional function of the Suv39h2 HMTase in organizing meiotic heterochromatin that may even impart an epigenetic imprint to the male germline.

[32086] Animal model experiments lend further support to the function of SUV39H2. Peters et al. (2001) generated mice deficient for either Suv39h1 or Suv39h2. These animals displayed normal viability and fertility and did not exhibit apparent phenotypes. The authors subsequently intercrossed Suv39h1 - /- and Suv39h2 - /- mice to generate compound Suv39h mutants that were then used to derive Suv39h double- null mice (Suv39h1 - /- and Suv39h2 - /-). These mice displayed severely impaired viability and chromosomal instabilities that were associated with an in-

creased tumor risk and perturbed chromosome interactions during male meiosis. These data suggested a crucial role for pericentric H3 histone- lys9 methylation in protecting genome stability and defined the Suv39h HMTases as important epigenetic regulators for mammalian development.

[32087] It is appreciated that the abovementioned animal model for SUV39H2 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[32088] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32089] O'Carroll, D.; Scherthan, H.; Peters, A. H. F. M.; Opravil, S.; Haynes, A. R.; Laible, G.; Rea, S.; Schmid, M.; Lebersorger, A.; Jerratsch, M.; Sattler, L.; Mattei, M. G.; Denny, P.; Brown, S. D. M.; Schweizer, D.; Jenuwein, T. : Isolation and characterization of Suv39h2, a second histone H3 methyltransferase gene that displays testis- specific expression. Molec. Cell. Biol. 20: 9423- 9433, 2000. ; and

[32090] Peters, A. H. F. M.; O'Carroll, D.; Scherthan, H.; Mechtler, K.; Sauer, S.; Schofer, C.; Weipoltshammer, K.; Pagani, M.; Lachner, M.; Kohlmaier, A.; Opravil, S.; Doyle, M.; Sibilia,

M.

[32091] Further studies establishing the function and utilities of SUV39H2 are found in John Hopkins OMIM database record ID 606503, and in cited publications listed in Table 5, which are hereby incorporated by reference.TPH2 (Accession NP_775489.1) is another GAM190 target gene, herein designated TARGET GENE. TPH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TPH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPH2 BINDING SITE, designated SEQ ID:11938, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32092] Another function of GAM190 is therefore inhibition of TPH2 (Accession NP_775489.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TPH2.

[32093] Trophinin (TRO, Accession NP_808223.1) is another GAM190 target gene, herein designated TARGET GENE. TRO BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA en-

coded by TRO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRO BINDING SITE, designated SEQ ID:7155, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32094] Another function of GAM190 is therefore inhibition of Trophinin (TRO, Accession NP_808223.1), a gene which functions as an adhesion molecule. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRO.

[32095] The function of TRO has been established by previous studies. The initial attachment of the trophoblast to the endometrial epithelium during implantation occurs via the apical cell membranes of the embryonic and maternal cells. Fukuda et al. (1995) found that cells from HT- H, a trophoblastic teratocarcinoma cell line, adhered efficiently to cells from SNG- M, an endometrial adenocarcinoma cell line. The adhesion was homophilic and cell type- specific, and occurred at the respective upper cell surfaces. To identify the adhesion molecules, the authors screened an HT- H expression library in COS- 1 cells. They found that expression of 2 distinct cDNAs, encoding trophinin

(cloned from trophoblastic cells) and tastin (OMIM Ref. No. 603872), was necessary for adhesion. The deduced 749-amino acid trophinin protein contains 69 tandem repeats of decapeptide sequences. In vitro translated trophinin has a molecular mass of 61 kD. Sequence and structural analyses revealed that trophinin is an intrinsic plasma membrane protein with 8 predicted transmembrane domains, an intracellular N- terminal region, and 3 hydrophilic regions exposed on the cell surface. COS- 1 cells expressing trophinin and tastin aggregated in suspension, and soluble peptides of the cell surface domain of trophinin bound to the cell surface of trophinin- expressing cells. Northern blot analysis detected trophinin expression as 3.5-, 7.5-, and 10- kb mRNAs in both HT- H and SNG- M cells. However, neither trophinin nor tastin was expressed in various other human cell types tested, with the exception of macrophages. Using immunofluorescence, Fukuda et al. (1995) detected strong expression of both genes in the trophectoderm surface of monkey blastocysts, as well as in human endometrial surface epithelium at a time consistent with that expected for the 'implantation window.' These authors suggested that trophinin and tastin might mediate the adhesion of the

blastocyst to the endometrial epithelium at the time of implantation. Using immunohistochemistry, Suzuki et al. (1999) determined that trophinin and bystin (OMIM Ref. No. 603871), a trophinin- and tastin- binding protein, were found in the placenta from the sixth week of pregnancy. Trophinin and bystin were localized in the cytoplasm of the syncytiotrophoblast in the chorionic villi and in endometrial decidual cells at the uteroplacental interface. After week 10, the levels of trophinin, tastin, and bystin decreased and then disappeared from placental villi.

[32096]

[32097] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32098] Fukuda, M. N.; Sato, T.; Nakayama, J.; Klier, G.; Mikami, M.; Aoki, D.; Nozawa, S. : Trophinin and tastin, a novel cell adhesion molecule complex with potential involvement in embryo implantation. Genes Dev. 9: 1199- 1210, 1995. ; and

Biol. Reprod.

[32100] Further studies establishing the function and utilities of TRO are found in John Hopkins OMIM database record ID 300132, and in cited publications listed in Table 5, which are hereby incorporated by reference.Trophinin (TRO, Accession NP_808226.1) is another GAM190 target gene, herein designated TARGET GENE. TRO BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRO BINDING SITE, designated SEQ ID:7155, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32101] Another function of GAM190 is therefore inhibition of Trophinin (TRO, Accession NP_808226.1), a gene which functions as an adhesion molecule. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRO.

[32102] The function of TRO has been established by previous studies. The initial attachment of the trophoblast to the endometrial epithelium during implantation occurs via the

apical cell membranes of the embryonic and maternal cells. Fukuda et al. (1995) found that cells from HT- H, a trophoblastic teratocarcinoma cell line, adhered efficiently to cells from SNG- M, an endometrial adenocarcinoma cell line. The adhesion was homophilic and cell type- specific, and occurred at the respective upper cell surfaces. To identify the adhesion molecules, the authors screened an HT- H expression library in COS- 1 cells. They found that expression of 2 distinct cDNAs, encoding trophinin (cloned from trophoblastic cells) and tastin (OMIM Ref. No. 603872), was necessary for adhesion. The deduced 749-amino acid trophinin protein contains 69 tandem repeats of decapeptide sequences. In vitro translated trophinin has a molecular mass of 61 kD. Sequence and structural analyses revealed that trophinin is an intrinsic plasma membrane protein with 8 predicted transmembrane domains, an intracellular N- terminal region, and 3 hydrophilic regions exposed on the cell surface. COS- 1 cells expressing trophinin and tastin aggregated in suspension, and soluble peptides of the cell surface domain of trophinin bound to the cell surface of trophinin- expressing cells. Northern blot analysis detected trophinin expression as 3.5-, 7.5-, and 10- kb mRNAs in both HT- H

and SNG- M cells. However, neither trophinin nor tastin was expressed in various other human cell types tested, with the exception of macrophages. Using immunofluorescence, Fukuda et al. (1995) detected strong expression of both genes in the trophectoderm surface of monkey blastocysts, as well as in human endometrial surface epithelium at a time consistent with that expected for the 'implantation window.' These authors suggested that trophinin and tastin might mediate the adhesion of the blastocyst to the endometrial epithelium at the time of implantation. Using immunohistochemistry, Suzuki et al. (1999) determined that trophinin and bystin (OMIM Ref. No. 603871), a trophinin- and tastin- binding protein, were found in the placenta from the sixth week of pregnancy. Trophinin and bystin were localized in the cytoplasm of the syncytiotrophoblast in the chorionic villi and in endometrial decidual cells at the uteroplacental interface. After week 10, the levels of trophinin, tastin, and bystin decreased and then disappeared from placental villi.

[32103]

[32104] Full details of the abovementioned studies are described in the following publications, the disclosure of which are

hereby incorporated by reference:

[32105] Fukuda, M. N.; Sato, T.; Nakayama, J.; Klier, G.; Mikami, M.; Aoki, D.; Nozawa, S. : Trophinin and tastin, a novel cell adhesion molecule complex with potential involvement in embryo implantation. Genes Dev. 9: 1199- 1210, 1995. ; and

[32106] Suzuki, N.; Nakayama, J.; Shih, I. M.; Aoki, D.; Nozawa, S.; Fukuda, M. N. : Expression of trophinin, tastin, and bystin by trophoblast and endometrial cells in human placenta. Biol. Reprod.

[32107] Further studies establishing the function and utilities of TRO are found in John Hopkins OMIM database record ID 300132, and in cited publications listed in Table 5, which are hereby incorporated by reference.Transient receptor potential cation channel, subfamily v, member 3 (TRPV3, Accession NP_659505.1) is another GAM190 target gene, herein designated TARGET GENE. TRPV3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPV3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV3 BINDING SITE, designated SEQ ID:668, to the nucleotide sequence of

GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32108] Another function of GAM190 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 3 (TRPV3, Accession NP_659505.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV3.

[32109] Ubiquilin 2 (UBQLN2, Accession NP_038472.2) is another GAM190 target gene, herein designated TARGET GENE. UBQLN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UBQLN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UBQLN2 BINDING SITE, designated SEQ ID:17562, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32110] Another function of GAM190 is therefore inhibition of Ubiquilin 2 (UBQLN2, Accession NP_038472.2), a gene which is involved in spindle pole body duplication with rad23. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with UBQLN2.

[32111] The function of UBQLN2 has been established by previous studies. By performing independent yeast 2- hybrid screens, Kleijnen et al. (2000) isolated cDNAs encoding PLIC1 (UBQLN1; 605046) and PLIC2, homologs of the mouse Plics (proteins linking integrin- associated protein (IAP; 601028) and cytoskeleton) and the yeast Dsk2 protein. The predicted 624- amino acid PLIC2 protein, also called UBQLN2, shares 72% amino acid identity with PLIC1. Two motifs are conserved in the mammalian PLICs and yeast Dsk2, an N- terminal ubiquitin (OMIM Ref. No. 191320)- like (UBL) domain and a C- terminal ubiquitin-associated (UBA) domain. Unlike ubiquitin, the UBL domain of the PLICs does not have a diglycine motif in its C terminus; the diglycine motif serves as a target site for cellular hydrolases that release ubiquitin from precursor fusion proteins. The absence of a GG sequence suggests that the UBL domain in the PLICs is an integral part of the open reading frame. The UBA domain is a loosely defined sequence motif present in multiple enzyme classes of the ubiquitination machinery. The most notable difference between the mammalian PLICs is the presence of a collagen- like motif in PLIC2 that is absent in PLIC1 and yeast

Dsk2. This domain is most homologous to the collagen- like oncoprotein of herpesvirus Saimiri, STP- C488, which is implicated in intracellular signaling via the RAS- RAF pathway (see OMIM Ref. No. 190020). The collagen- like domain of PLIC2 contains 8 PXGP motifs that are susceptible to cleavage by collagenase in vitro. Kleijnen et al (2000) showed that the human PLICs physically associate with both proteasomes and ubiquitin ligases in large complexes. Overexpression of PLICs interfered with the in vivo degradation of 2 unrelated ubiquitin- dependent proteasome substrates, p53 (OMIM Ref. No. 191170) and I- kappa- B- alpha (NFKBIA; 164008), but not a ubiquitin- independent substrate. These findings raised the possibility that the PLICs, and possibly related ubiquitin- like family members, may functionally link the ubiquitination machinery to the proteasome to affect in vivo protein degradation. By screening a human lung 2- hybrid cDNA library using a pGBT9- STCH (OMIM Ref. No. 601100) plasmid as bait, Kaye et al. (2000) isolated a cDNA encoding UBQLN2, which they termed CHAP1/DSK2. Mutation analysis determined that the C- terminal Sti1- like repeat sequence, but neither the N- terminal UBL domain nor the C- terminal UBA domain, is required for binding of

UBQLN2 to the ATPase domain of STCH.

[32112]

[32113] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32114] Kaye, F. J.; Shows, T. B. : Assignment of ubiquilin 2 (UBQLN2) to human chromosome xp11.23- p11.1 by GeneBridge radiation hybrids. Cytogenet. Cell Genet. 89: 116- 117, 2000. ; and

[32115] Kleijnen, M. F.; Shih, A. H.; Zhou, P.; Kumar, S.; Soccio, R. E.; Kedersha, N. L.; Gill, G.; Howley, P. M. : The hPLIC proteins may provide a link between the ubiquitination machinery.

[32116] Further studies establishing the function and utilities of UBQLN2 are found in John Hopkins OMIM database record ID 300264, and in cited publications listed in Table 5, which are hereby incorporated by reference.Unc-5 homolog b (c. elegans) (UNC5C, Accession NP_003719.2) is another GAM190 target gene, herein designated TARGET GENE. UNC5C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UNC5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC5C BINDING SITE, designated SEQ ID:19876, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32117] Another function of GAM190 is therefore inhibition of Unc-5 homolog b (c. elegans) (UNC5C, Accession NP_003719.2), a gene which is a putative receptor for netrin, which is involved in axon guidance. Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC5C.

[32118] The function of UNC5C has been established by previous studies. Migration of neurons from proliferative zones to their functional sites is fundamental to the normal development of the central nervous system. Mice homozygous for the rostral cerebellar malformation (rcm) mutation exhibit cerebellar and midbrain defects, apparently as a result of abnormal neuronal migration. Ackerman et al. (1997) reported that in rcm- mutant mice, the cerebellum is smaller and has fewer folia than in wildtype, ectopic cerebellar cells are present in midbrain regions by 3 days after birth, and there are abnormalities in postnatal cere-

bellar- neuronal migration. The authors isolated cDNAs encoding the rcm protein (Rcm). Sequence analysis revealed that the predicted 931- amino acid mouse protein is a transmembrane protein that contains 2 immunoglobulin (Ig)- like domains and 2 type I thrombospondin (THBS1; 188060) motifs in the extracellular region. Ig and THBS1 domains are also found in the extracellular region of the C. elegans UNC5 transmembrane protein, and the C- terminal 865- amino acid region of Rcm is 30% identical to UNC5. Ackerman et al. (1997) stated that the UNC5 protein is essential for dorsal guidance of pioneer axons and for the movement of cells away from the netrin ligand. In the developing brain of vertebrates, netrin- 1 (OMIM Ref. No. 601614) plays a role in both cell migration and axonal guidance. Leonardo et al. (1997) demonstrated that Rcm binds netrin- 1 in vitro. Ackerman et al. (1997) concluded that Rcm and its ligand are important in critical migratory and/or cell- proliferation events during cerebellar development. Przyborski et al. (1998) found that disruption of the mouse rcm gene, also called the Unc5h3 gene, resulted in a failure of tangentially migrating granule cells to recognize the rostral boundary of the cerebellum. By searching an EST database for sequences related

to the Unc5h3 gene, Ackerman and Knowles (1998) identified a partial human fetal brain cDNA encoding UNC5C, the human Unc5h3 homolog. Using 5- prime RACE, they cloned a cDNA corresponding to the entire UNC5C coding region. The predicted 931- amino acid human protein has the overall domain structure of UNC5 family proteins, and is 97% identical to Unc5h3. Northern blot analysis revealed that the 9.5- kb UNC5 mRNA is expressed in brain and heart, and at low levels in kidney.

[32119]

[32120] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32121] Przyborski, S. A.; Knowles, B. B.; Ackerman, S. L. : Embryonic phenotype of Unc5h3 mutant mice suggests chemorepulsion during the formation of the rostral cerebellar boundary. Development 125: 41- 50, 1998. ; and

[32122] Ackerman, S. L.; Knowles, B. B. : Cloning and mapping of the UNC5C gene to human chromosome 4q21- q23. Genomics 52: 205- 208, 1998.

[32123] Further studies establishing the function and utilities of UNC5C are found in John Hopkins OMIM database record ID 603610, and in cited publications listed in Table 5,

which are hereby incorporated by reference.Reserved (WDR17, Accession NP_733828.2) is another GAM190 target gene, herein designated TARGET GENE. WDR17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WDR17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WDR17 BINDING SITE, designated SEQ ID:1039, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32124] Another function of GAM190 is therefore inhibition of Reserved (WDR17, Accession NP_733828.2) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WDR17.

[32125] ZBTB2 (Accession NP_065912.1) is another GAM190 target gene, herein designated TARGET GENE. ZBTB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZBTB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZBTB2 BIND-

ING SITE, designated SEQ ID:12940, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32126] Another function of GAM190 is therefore inhibition of ZBTB2 (Accession NP_065912.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZBTB2.

[32127] Zinc finger protein 179 (ZNF179, Accession NP_009079.1) is another GAM190 target gene, herein designated TARGET GENE. ZNF179 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF179, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF179 BINDING SITE, designated SEQ ID:13355, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32128] Another function of GAM190 is therefore inhibition of Zinc finger protein 179 (ZNF179, Accession NP_009079.1), a gene which has zink finger and a member of the RING finger protein family of transcription factors. and therefore may be associated with Smith- magenis syndrome. Ac-

cordingly, utilities of GAM190 include diagnosis, prevention and treatment of Smith- magenis syndrome, and of other diseases and clinical conditions associated with ZNF179.

[32129] The function of ZNF179 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Zinc finger protein 213 (ZNF213, Accession XP_036493.1) is another GAM190 target gene, herein designated TARGET GENE. ZNF213 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF213, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF213 BINDING SITE, designated SEQ ID:6621, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32130] Another function of GAM190 is therefore inhibition of Zinc finger protein 213 (ZNF213, Accession XP_036493.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF213.

[32131] Zinc finger protein 264 (ZNF264, Accession NP_003408.1) is another GAM190 target gene, herein designated TARGET GENE. ZNF264 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF264 BINDING SITE, designated SEQ ID:15761, to the nucleotide sequence of GAM190 RNA, herein designated GAM RNA, also designated SEQ ID:289.

[32132] Another function of GAM190 is therefore inhibition of Zinc finger protein 264 (ZNF264, Accession NP_003408.1) . Accordingly, utilities of GAM190 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF264.

[32133]

[32134] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 191 (GAM191), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[32135] GAM191 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM191 was detected is described hereinabove with reference to Figs. 8-15.

[32136] GAM191 gene, herein designated GAM GENE, and GAM191 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[32137] GAM191 gene encodes a GAM191 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM191 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM191 precursor RNA is designated SEQ ID:165, and is provided hereinbelow with reference to the sequence listing part.

[32138] GAM191 precursor RNA folds onto itself, forming GAM191 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide

sequence of the second half thereof.

[32139] GAM191 precursor RNA folds onto itself, forming GAM191 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[32140] Nucleotide sequence of GAM191 precursor RNA, designated SEQ-ID: 165, and a schematic representation of a predicted secondary folding of GAM191 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[32141] An enzyme complex designated DICER COMPLEX, `dices` the GAM191 folded precursor RNA into GAM191 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy

Group: C) nucleotide sequence of GAM191 RNA is designated SEQ ID:389, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[32142] GAM191 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM191 target RNA, herein designated GAM TARGET RNA. GAM191 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[32143] GAM191 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM191 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM191 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limit-

ing GAM191 RNA may have a different number of target binding sites in untranslated regions of a GAM191 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[32144] The complementary binding of GAM191 RNA, herein designated GAM RNA, to target binding sites on GAM191 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM191 target RNA into GAM191 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[32145] It is appreciated that GAM191 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM191 target genes. The mRNA of each one of this plurality of GAM191 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM191 RNA, herein designated GAM RNA, and which when bound by GAM191 RNA causes inhibition of translation of respective one or more GAM191 target proteins.

[32146] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM191 gene, herein designated GAM GENE, on one or more GAM191 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[32147] It is appreciated that specific functions and accordingly utilities of GAM191 correlate with, and may be deduced from, the identity of the target genes which GAM191 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[32148]

[32149]

[32150] PRO1048 (Accession NM_018497.1) is a GAM191 target gene, herein designated TARGET GENE. PRO1048 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO1048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO1048 BINDING SITE, designated SEQ ID:7282, to the nucleotide sequence of GAM191 RNA, herein designated GAM RNA, also designated SEQ ID:389.

[32151] A function of GAM191 is therefore inhibition of PRO1048 (Accession NM_018497.1) . Accordingly, utilities of GAM191 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1048.

[32152]

[32153] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 192 (GAM192), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[32154] GAM192 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method

by which GAM192 was detected is described hereinabove with reference to Figs. 8-15.

[32155] GAM192 gene, herein designated GAM GENE, and GAM192 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[32156] GAM192 gene encodes a GAM192 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM192 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM192 precursor RNA is designated SEQ ID:70, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:70 is located at position 208634246 relative to chromosome 2.

[32157] GAM192 precursor RNA folds onto itself, forming GAM192 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[32158] GAM192 precursor RNA folds onto itself, forming GAM192 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[32159] Nucleotide sequence of GAM192 precursor RNA, designated SEQ-ID: 70, and a schematic representation of a predicted secondary folding of GAM192 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[32160] An enzyme complex designated DICER COMPLEX, `dices` the GAM192 folded precursor RNA into GAM192 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM192 RNA is desig-

nated SEQ ID:393, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[32161] GAM192 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM192 target RNA, herein designated GAM TARGET RNA. GAM192 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[32162] GAM192 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM192 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM192 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM192 RNA may have a different number of target

binding sites in untranslated regions of a GAM192 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[32163] The complementary binding of GAM192 RNA, herein designated GAM RNA, to target binding sites on GAM192 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM192 target RNA into GAM192 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[32164] It is appreciated that GAM192 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM192 target genes. The mRNA of each one of this plurality of GAM192 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM192 RNA, herein designated GAM RNA, and which when bound by GAM192 RNA causes inhibition of translation of respective one or more GAM192 target proteins.

[32165] It is further appreciated by one skilled in the art that the

mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM192 gene, herein designated GAM GENE, on one or more GAM192 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[32166] It is appreciated that specific functions and accordingly utilities of GAM192 correlate with, and may be deduced from, the identity of the target genes which GAM192 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[32167]

[32168]

[32169] A kinase (prka) anchor protein 2 (AKAP2, Accession) is a GAM192 target gene, herein designated TARGET GENE. AKAP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AKAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKAP2 BINDING SITE, designated SEQ ID:7475, to the nucleotide sequence of GAM192 RNA, herein designated GAM RNA, also designated SEQ ID:393.

[32170] A function of GAM192 is therefore inhibition of A kinase (prka) anchor protein 2 (AKAP2, Accession), a gene which binds to regulatory subunit (rii) of protein kinase a. Accordingly, utilities of GAM192 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP2.

[32171] The function of AKAP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.KIAA1336 (Accession NM_020779.1) is another GAM192 target gene, herein designated TARGET GENE. KIAA1336 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

KIAA1336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1336 BINDING SITE, designated SEQ ID:4284, to the nucleotide sequence of GAM192 RNA, herein designated GAM RNA, also designated SEQ ID:393.

[32172] Another function of GAM192 is therefore inhibition of KIAA1336 (Accession NM_020779.1) . Accordingly, utilities of GAM192 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1336.

[32173]

[32174] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 193 (GAM193), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[32175] GAM193 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM193 was detected is described hereinabove with reference to Figs. 8-15.

[32176] GAM193 gene, herein designated GAM GENE, and

GAM193 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[32177] GAM193 gene encodes a GAM193 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM193 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM193 precursor RNA is designated SEQ ID:139, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:139 is located at position 362 relative to chromosome 7.

[32178] GAM193 precursor RNA folds onto itself, forming GAM193 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[32179] GAM193 precursor RNA folds onto itself, forming GAM193 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin

structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[32180] Nucleotide sequence of GAM193 precursor RNA, designated SEQ-ID: 139, and a schematic representation of a predicted secondary folding of GAM193 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[32181] An enzyme complex designated DICER COMPLEX, `dices` the GAM193 folded precursor RNA into GAM193 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM193 RNA is designated SEQ ID:268, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[32182] GAM193 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM193 target RNA, herein designated GAM TARGET RNA. GAM193 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[32183] GAM193 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM193 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM193 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM193 RNA may have a different number of target binding sites in untranslated regions of a GAM193 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an

example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[32184] The complementary binding of GAM193 RNA, herein designated GAM RNA, to target binding sites on GAM193 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM193 target RNA into GAM193 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[32185] It is appreciated that GAM193 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM193 target genes. The mRNA of each one of this plurality of GAM193 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM193 RNA, herein designated GAM RNA, and which when bound by GAM193 RNA causes inhibition of translation of respective one or more GAM193 target proteins.

[32186] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM193 gene, herein designated GAM GENE, on one or

more GAM193 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[32187] It is appreciated that specific functions and accordingly utilities of GAM193 correlate with, and may be deduced from, the identity of the target genes which GAM193 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[32188]

[32189]

[32190] AHRR (Accession NP_065782.1) is a GAM193 target gene, herein designated TARGET GENE. AHRR BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by AHRR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AHRR BINDING SITE, designated SEQ ID:2984, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32191] A function of GAM193 is therefore inhibition of AHRR (Accession NP_065782.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AHRR.

[32192] Aldo-keto reductase family 7, member a3 (aflatoxin aldehyde reductase) (AKR7A3, Accession NP_036199.1) is another GAM193 target gene, herein designated TARGET GENE. AKR7A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AKR7A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKR7A3 BINDING SITE, designated SEQ ID:11149, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32193] Another function of GAM193 is therefore inhibition of Aldo-keto reductase family 7, member a3 (aflatoxin aldehyde reductase) (AKR7A3, Accession NP_036199.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKR7A3.

[32194] Angiomotin like 1 (AMOTL1, Accession NP_570899.1) is another GAM193 target gene, herein designated TARGET GENE. AMOTL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AMOTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMOTL1 BINDING SITE, designated SEQ ID:14975, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32195] Another function of GAM193 is therefore inhibition of Angiomotin like 1 (AMOTL1, Accession NP_570899.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMOTL1.

[32196] Bcl2-like 13 (apoptosis facilitator) (BCL2L13, Accession

NP_056182.1) is another GAM193 target gene, herein designated TARGET GENE. BCL2L13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCL2L13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCL2L13 BINDING SITE, designated SEQ ID:14529, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32197] Another function of GAM193 is therefore inhibition of Bcl2-like 13 (apoptosis facilitator) (BCL2L13, Accession NP_056182.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCL2L13.

[32198] Chromosome 2 open reading frame 7 (C2orf7, Accession NP_115695.1) is another GAM193 target gene, herein designated TARGET GENE. C2orf7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C2orf7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C2orf7 BINDING SITE, designated

SEQ ID:11975, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32199] Another function of GAM193 is therefore inhibition of Chromosome 2 open reading frame 7 (C2orf7, Accession NP_115695.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C2orf7.

[32200] C4ST (Accession NP_060883.1) is another GAM193 target gene, herein designated TARGET GENE. C4ST BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C4ST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C4ST BINDING SITE, designated SEQ ID:18004, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32201] Another function of GAM193 is therefore inhibition of C4ST (Accession NP_060883.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C4ST.

[32202] Calcium channel, voltage-dependent, beta 2 subunit

(CACNB2, Accession NP_000715.1) is another GAM193 target gene, herein designated TARGET GENE. CACNB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CACNB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CACNB2 BINDING SITE, designated SEQ ID:11254, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32203] Another function of GAM193 is therefore inhibition of Calcium channel, voltage-dependent, beta 2 subunit (CACNB2, Accession NP_000715.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CACNB2.

[32204] Calpain 2, (m/ii) large subunit (CAPN2, Accession NP_001739.1) is another GAM193 target gene, herein designated TARGET GENE. CAPN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAPN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of CAPN2 BINDING SITE, designated SEQ ID:4529, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32205] Another function of GAM193 is therefore inhibition of Calpain 2, (m/ii) large subunit (CAPN2, Accession NP_001739.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPN2.

[32206] Carboxypeptidase d (CPD, Accession NP_001295.2) is another GAM193 target gene, herein designated TARGET GENE. CPD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPD BINDING SITE, designated SEQ ID:7505, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32207] Another function of GAM193 is therefore inhibition of Carboxypeptidase d (CPD, Accession NP_001295.2), a gene which is a membrane- bound metalloprotease. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with CPD.

[32208] The function of CPD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.DKFZp434M0331 (Accession NP_060070.1) is another GAM193 target gene, herein designated TARGET GENE. DKFZp434M0331 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp434M0331, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434M0331 BINDING SITE, designated SEQ ID:16786, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32209] Another function of GAM193 is therefore inhibition of DKFZp434M0331 (Accession NP_060070.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434M0331.

[32210] Down syndrome critical region gene 1-like 1 (DSCR1L1, Accession NP_005813.1) is another GAM193 target gene, herein designated TARGET GENE. DSCR1L1 BINDING SITE

is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR1L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSCR1L1 BINDING SITE, designated SEQ ID:3399, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32211] Another function of GAM193 is therefore inhibition of Down syndrome critical region gene 1-like 1 (DSCR1L1, Accession NP_005813.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSCR1L1.

[32212] Ets variant gene 5 (ets-related molecule) (ETV5, Accession NP_004445.1) is another GAM193 target gene, herein designated TARGET GENE. ETV5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ETV5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ETV5 BINDING SITE, designated SEQ ID:10755, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ

ID:268.

[32213] Another function of GAM193 is therefore inhibition of Ets variant gene 5 (ets-related molecule) (ETV5, Accession NP_004445.1), a gene which DNA binding protein of the Ets oncoprotein family. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ETV5.

[32214] The function of ETV5 has been established by previous studies. See ETV1 (OMIM Ref. No. 600541), ETV4 (OMIM Ref. No. 600711), and ETV6 (OMIM Ref. No. 600618). Monte et al. (1994) isolated a human testis cDNA for ERM, a member of the Ets- related transcription factors. The 2.2- kb clone encoded a 510- amino acid putative protein which shares about 95% identity with the mouse genes Pea3 and Er81 in the 85- residue DNA- binding ETS do- main. ERM is about 85% identical with these proteins within the N- terminal acidic domain. Further, the protein was shown to bind to an oligonucleotide containing the consensus nucleotide core sequence GGAA recognized by the other Ets proteins. Monte et al. (1994) showed that ERM is widely expressed in human cell lines and tissues (except for normal lymphocytes) and is especially high in brain and placenta. In mouse tissues, Pea3 and Er81 mR-

NAs displayed restricted patterns of expression, whereas ERM was widely expressed in human tissues. Monte et al. (1996) showed that the human ERM gene contains 14 exons distributed over 65 kb of genomic DNA. The authors mapped the gene to 3q27- q29 by in situ hybridization. Protopopova et al. (1996) mapped the ERM gene, a transcription factor related to the ETS1 (OMIM Ref. No. 164720), to 3q28 by fluorescence in situ hybridization.

[32215]

[32216] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32217] Monte, D.; Baert, J. L.; Defossez, P. A.; de Launoit, Y.; Stehelin, D. : Molecular cloning and characterization of human ERM, a new member of the Ets family closely related to mouse PEA3 and ER81 transcription factors. Oncogene 9: 1397- 1406, 1994. ; and

[32218] Monte, D.; Coutte, L.; Dewitte, F.; Defossez, P.- A.; Le Coniat, M.; Stehelin, D.; Berger, R.; de Launoit, Y. : Genomic organization of the human ERM (ETV5) gene, a PEA3 group member of E.

[32219] Further studies establishing the function and utilities of ETV5 are found in John Hopkins OMIM database record ID

601600, and in cited publications listed in Table 5, which are hereby incorporated by reference.Formin homology 2 domain containing 2 (FHOD2, Accession XP_057927.2) is another GAM193 target gene, herein designated TARGET GENE. FHOD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FHOD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FHOD2 BINDING SITE, designated SEQ ID:8919, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32220] Another function of GAM193 is therefore inhibition of Formin homology 2 domain containing 2 (FHOD2, Accession XP_057927.2) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FHOD2.

[32221] FLJ10824 (Accession XP_051956.8) is another GAM193 target gene, herein designated TARGET GENE. FLJ10824 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10824, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ10824 BINDING SITE, designated SEQ ID:13628, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32222] Another function of GAM193 is therefore inhibition of FLJ10824 (Accession XP_051956.8) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10824.

[32223] FLJ20265 (Accession NP_060203.2) is another GAM193 target gene, herein designated TARGET GENE. FLJ20265 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20265, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20265 BINDING SITE, designated SEQ ID:15924, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32224] Another function of GAM193 is therefore inhibition of FLJ20265 (Accession NP_060203.2) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20265.

[32225] FLJ21302 (Accession NP_075052.1) is another GAM193 target gene, herein designated TARGET GENE. FLJ21302 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21302, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21302 BINDING SITE, designated SEQ ID:17809, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32226] Another function of GAM193 is therefore inhibition of FLJ21302 (Accession NP_075052.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21302.

[32227] GAS41 (Accession NP_006521.1) is another GAM193 target gene, herein designated TARGET GENE. GAS41 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GAS41, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAS41

BINDING SITE, designated SEQ ID:14327, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32228] Another function of GAM193 is therefore inhibition of GAS41 (Accession NP_006521.1), a gene which may also represent a transcription factor. and therefore may be associated with Glioma. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of Glioma, and of other diseases and clinical conditions associated with GAS41.

[32229] The function of GAS41 has been established by previous studies. Gene amplification, which is generally considered to occur late in tumor development, is a common feature of high- grade glioma. Fischer et al. (1997) reported cloning and sequencing a cDNA, termed glioma- amplified sequence- 41 (GAS41) by them, that was identified in a glioblastoma cell line by microdissection- mediated cDNA capture. An increased copy number of GAS41 was found in glioblastoma multiforme and astrocytoma III, and at a high frequency in astrocytoma grades I and II. Sequence comparison indicated high similarity between the GAS41 protein, the yeast and human AF9 (OMIM Ref. No. 159558), and human ENL (OMIM Ref. No. 159556). Fischer

et al. (1997) noted that both AF9 and ENL belong to a new class of transcription factors, indicating that GAS41 may also represent a transcription factor. With GAS41 being the first gene found with increased copy number in low-grade glioma, this study provided the first evidence that gene amplification can occur in early tumor development. The GAS41 gene had been isolated from a homogeneously staining region (HSR) at 12q13- q15 by microdissection-mediated cDNA capture (Gracia et al., 1996).

[32230]

[32231] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32232] Fischer, U.; Heckel, D.; Michel, A.; Janka, M.; Hulsebos, T.; Meese, E. : Cloning of a novel transcription factor- like gene amplified in human glioma including astrocytoma grade I. Hum. Molec. Genet. 6: 1817- 1822, 1997. ; and

[32233] Gracia, E.; Fischer, U.; Elkahloun, A.; Trent, J. M.; Meese, E.; Meltzer, P. S. : Isolation of genes amplified in human cancers by microdissection mediated cDNA capture. Hum. Molec. Gen.

[32234] Further studies establishing the function and utilities of GAS41 are found in John Hopkins OMIM database record

ID 602116, and in cited publications listed in Table 5, which are hereby incorporated by reference.Glutamate receptor, ionotropic, n-methyl d-aspartate 2b (GRIN2B, Accession NP_000825.1) is another GAM193 target gene, herein designated TARGET GENE. GRIN2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRIN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIN2B BINDING SITE, designated SEQ ID:16251, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32235] Another function of GAM193 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl d-aspartate 2b (GRIN2B, Accession NP_000825.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIN2B.

[32236] General transcription factor iih, polypeptide 2, 44kda (GTF2H2, Accession NP_001506.1) is another GAM193 target gene, herein designated TARGET GENE. GTF2H2 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by GTF2H2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2H2 BINDING SITE, designated SEQ ID:8307, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32237] Another function of GAM193 is therefore inhibition of General transcription factor iih, polypeptide 2, 44kda (GTF2H2, Accession NP_001506.1), a gene which is subunit of RNA polymerase II transcription initiation factor IIH and involves in transcription and DNA repair. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2H2.

[32238] The function of GTF2H2 has been established by previous studies. Transcription factor IIH (TFIIH; OMIM Ref. No. 189972) is associated with the RNA polymerase II transcription complex, which is involved in transcription and transcription- mediated DNA repair. Humbert et al. (1994) described the cloning of the genes encoding the human 44- kD subunit and the 34- kD subunit (OMIM Ref. No. 601750) of TFIIH. The 44- kD subunit gene (also symbol-

ized GTF2H2) appears to be the human counterpart of yeast SSL1, a gene involved in UV resistance. The childhood- onset spinal muscular atrophies are a clinical heterogeneous group of autosomal recessive disorders characterized by selective degeneration of the anterior horn cells with subsequent weakness and atrophy of limb muscles; see SMA1 (OMIM Ref. No. 253300). The disease locus maps to 5q13, a region characterized by genetic instability and DNA duplication. Carter et al. (1997) noted that, among the duplicated genes in this region, the telomeric copy of the SMN (survival motor neuron) gene (SMN1; 600354) is thought to be the major disease- determining gene, since it is missing in the majority of SMA patients and since small, intragenic mutations in the gene have been associated with the disorder. Approximately half of the severely affected SMA1 patients are also missing both homologs of a neighboring gene, the neuronal apoptosis inhibitory protein (NAIP; 600355). The loss of NAIP may affect disease severity. Clearly, the molecular event underlying the childhood- onset SMAs are complex, possibly involving multiple genes. Carter et al. (1997) reported a third multicopy gene in the SMA region, encoding the p44 subunit of basal transcription factor II (BTF2). One copy of

this transcription- repair gene (symbolized BTF2p44 by them) was deleted in at least 15% of all SMA cases. A single copy of the gene was mapped to the SMA region on 5q by van der Steege et al. (1995). Carter et al. (1997) reported the presence of multiple copies of the gene in the SMA region located in close proximity to NAIP and SMN1. Furthermore, they reported a 1- bp polymorphism that distinguished 2 gene copies and they documented the SMA- associated deletion of 1 version of the gene. The 2 polymorphic forms of the p44 gene differ by 2 nonconservative changes (ile- to- met in exon 7 and leu- to- val in exon 10), appear to be ubiquitously expressed, and are present in fetal and adult tissues and in SMA and control lymphoblasts. Carter et al. (1997) stated that physical mapping in the SMA region is complicated and imprecise, presumably due to the great instability and variability arising from the duplication, deletion, and gene conversion of highly homologous DNA in this region.

[32239]

[32240] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32241] Humbert, S.; van Vuuren, H.; Lutz, Y.; Hoeijmakers, J. H.;

Egly, J. M.; Moncollin, V. : p44 and p34 subunits of the BTF2/TFIIH transcription factor have homologies with SSL1, a yeast protein involved in DNA repair. EMBO J. 13: 2393- 2398, 1994. ; and

[32242] Carter, T. A.; Bonnemann, C. G.; Wang, C. H.; Obici, S.; Parano, E.; De Fatima Bonaldo, M.; Ross, B. M.; Penchaszadeh, G. K.; Mackenzie, A.; Bento Soares, M.; Kunkel, L. M.; Gilliam, T.

[32243] Further studies establishing the function and utilities of GTF2H2 are found in John Hopkins OMIM database record ID 601748, and in cited publications listed in Table 5, which are hereby incorporated by reference.Glycogenin 2 (GYG2, Accession NP_003909.1) is another GAM193 target gene, herein designated TARGET GENE. GYG2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYG2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GYG2 BINDING SITE, designated SEQ ID:9556, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32244] Another function of GAM193 is therefore inhibition of

Glycogenin 2 (GYG2, Accession NP_003909.1), a gene which primes de novo glycogen synthesis and can determine glycogen accumulation. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GYG2.

[32245] The function of GYG2 has been established by previous studies. Glycogenin is a self- glucosylating protein covalently linked to glycogen that acts as a primer for the action of glycogen synthase. See GYG, the muscle glycogenin (OMIM Ref. No. 603942). By searching an EST database for sequences related to GYG, Mu et al. (1997) isolated cDNAs encoding a related protein, which they designated glycogenin- 2 (GN2). They suggested that muscle glycogenin be referred to as glycogenin- 1. Sequence analysis revealed that the cDNAs encode several different GN2 isoforms, 3 of which are found in liver. The liver isoforms, which have different N termini, share 42 to 45% protein sequence identity with glycogenin- 1. Mu et al. (1997) demonstrated that recombinant GN2 exhibited all of the biochemical properties of glycogenin; it self-glucosylated, acted as a substrate for glycogen synthase, and was released from glycogen by alpha- amylase treatment. Northern blot analysis revealed that the 3.6- kb

GN2 mRNA was expressed most strongly in liver. Mu and Roach (1998) determined that human liver extracts contain both glycogenin- 1 and GN2. In vitro and coimmunoprecipitation studies demonstrated that the 2 glycogenins interact with each other. Unlike glycogenin- 1, overexpression of GN2 in mammalian cells resulted in a significant increase in glycogen accumulation in the cell, indicating that the level of GN2 can determine glycogen accumulation.

[32246]

[32247] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32248] Mu, J.; Roach, P. J. : Characterization of human glycogenin- 2, a self- glucosylating initiator of liver glycogen metabolism. J. Biol. Chem. 273: 34850- 34856, 1998. ; and

[32249] Mu, J.; Skurat, A. V.; Roach, P. J. : Glycogenin- 2, a novel self- glucosylating protein involved in liver glycogen biosynthesis. J. Biol. Chem. 272: 27589- 27597, 1997.

[32250] Further studies establishing the function and utilities of GYG2 are found in John Hopkins OMIM database record ID 300198, and in cited publications listed in Table 5, which

are hereby incorporated by reference.HSPC230 (Accession NP_057571.1) is another GAM193 target gene, herein designated TARGET GENE. HSPC230 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPC230, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC230 BINDING SITE, designated SEQ ID:9132, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32251] Another function of GAM193 is therefore inhibition of HSPC230 (Accession NP_057571.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC230.

[32252] IRTA1 (Accession NP_112572.1) is another GAM193 target gene, herein designated TARGET GENE. IRTA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IRTA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRTA1 BIND-

ING SITE, designated SEQ ID:7687, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32253] Another function of GAM193 is therefore inhibition of IRTA1 (Accession NP_112572.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRTA1.

[32254] Integrin, alpha v (vitronectin receptor, alpha polypeptide, antigen cd51) (ITGAV, Accession NP_002201.1) is another GAM193 target gene, herein designated TARGET GENE. ITGAV BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITGAV, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGAV BINDING SITE, designated SEQ ID:12126, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32255] Another function of GAM193 is therefore inhibition of Integrin, alpha v (vitronectin receptor, alpha polypeptide, antigen cd51) (ITGAV, Accession NP_002201.1), a gene which is a member of the integrin family of cell- surface proteins. Accordingly, utilities of GAM193 include diagno-

sis, prevention and treatment of diseases and clinical conditions associated with ITGAV.

[32256] The function of ITGAV and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.KIAA0555 (Accession NP_055605.1) is another GAM193 target gene, herein designated TARGET GENE. KIAA0555 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0555 BINDING SITE, designated SEQ ID:6266, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32257] Another function of GAM193 is therefore inhibition of KIAA0555 (Accession NP_055605.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0555.

[32258] KIAA1046 (Accession NP_055743.1) is another GAM193 target gene, herein designated TARGET GENE. KIAA1046 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1046, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1046 BINDING SITE, designated SEQ ID:17833, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32259] Another function of GAM193 is therefore inhibition of KIAA1046 (Accession NP_055743.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1046.

[32260] KIAA1265 (Accession XP_047707.1) is another GAM193 target gene, herein designated TARGET GENE. KIAA1265 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1265, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1265 BINDING SITE, designated SEQ ID:8735, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32261] Another function of GAM193 is therefore inhibition of

KIAA1265 (Accession XP_047707.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1265.

[32262] KIAA1935 (Accession XP_087672.1) is another GAM193 target gene, herein designated TARGET GENE. KIAA1935 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1935, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1935 BINDING SITE, designated SEQ ID:5530, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32263] Another function of GAM193 is therefore inhibition of KIAA1935 (Accession XP_087672.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1935.

[32264] KIDINS220 (Accession XP_291015.1) is another GAM193 target gene, herein designated TARGET GENE. KIDINS220 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIDINS220, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIDINS220 BINDING SITE, designated SEQ ID:5248, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32265] Another function of GAM193 is therefore inhibition of KIDINS220 (Accession XP_291015.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIDINS220.

[32266] V-kit hardy-zuckerman 4 feline sarcoma viral oncogene homolog (KIT, Accession NP_000213.1) is another GAM193 target gene, herein designated TARGET GENE. KIT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIT BINDING SITE, designated SEQ ID:17832, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32267] Another function of GAM193 is therefore inhibition of V-

kit hardy-zuckerman 4 feline sarcoma viral oncogene homolog (KIT, Accession NP_000213.1), a gene which is the receptor for stem cell factor (mast cell growth factor) and has a tyrosine- protein kinase activity. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIT.

[32268] The function of KIT has been established by previous studies. Geissler et al. (1988) showed that in the mouse the kit gene is disrupted in 2 spontaneous mutant W alleles. It was previously known that mutations at the W locus in the mouse (producing changes, including white- coat color, sterility, and anemia, attributable to failure of stem cell populations to migrate and/or proliferate effectively during development) map in the same region as kit. Thus, the KIT protooncogene, which encodes a putative tyrosine kinase receptor, was a candidate for the W locus. The protooncogene KIT encodes a transmembrane tyrosine kinase. A strong structural homology of KIT to the CSF1 receptor (OMIM Ref. No. 164770) and the platelet- derived growth factor receptor (OMIM Ref. No. 173490) suggests a model for the action of the KIT gene product during differentiation. The phenotypes of W mutants suggest that 3

cell populations in which KIT function is critical are the pluripotent hematopoietic stem cell, the migrating melanoblast during early embryonic development, and the primordial germ cell during this same period of development. Identification of the ligand for KIT will help in the understanding of its function. A genetic clue to its nature may be found through characterization of the Sl ('steel') locus of the mouse. The phenotypes of mutants at this locus closely resemble mutants at the W locus; however, unlike W, the defect in Sl is not intrinsic to the progenitor stem cells of the affected tissues, but rather lies in the environment in which melanoblast, germ cell, and hematopoietic progenitors differentiate and proliferate. Chabot et al. (1988) also related kit to a W mutation in the mouse. These findings will prompt search for comparable changes in disorders such as Fanconi anemia (OMIM Ref. No. 227650). In the dominant W(42) spotting phenotype in the mouse, Tan et al. (1990) demonstrated an asp790- to- asparagine mutation in the KIT protein product. Aspartic acid- 790 is a conserved residue in all protein kinases. Nocka et al. (1990) identified mutations in other alleles at the W locus: W(37), E- to- K at position 582; W(v), T- to- M at position 660; and W(41), V- to- M at po-

sition 831. The W mutation is the result of a 78- amino acid deletion that includes the transmembrane of the KIT protein. Nocka et al. (1990) detected a 125- kD KIT protein in homozygous W/W mast cells which lacked kinase activity and did not express KIT on the cell surface. Thus, in mice, the c- kit receptor tyrosine kinase is the gene product of the W locus, whereas Sl encodes the ligand for this growth factor receptor. Microphthalmia (mi/mi) in mice also shows deficiency in melanocytes and mast cells. In addition, whereas W and Sl mutants can be anemic and sterile, 'mi' mice are osteopetrotic due to a monocyte/ macrophage defect. Dubreuil et al. (1991) found that the fms gene (OMIM Ref. No. 164770) complements the mitogenic defect in mast cells of mutant W mice but not of mi/ mi mice. Brannan et al. (1991) detected a HaeIII polymorphism in the KIT gene. This polymorphism was linked to other 4q markers. Poduslo et al. (1991) described a strategy for identifying polymorphic genetic markers in the 3- prime untranslated regions of coding loci. The method combined PCR and single- strand conformation polymorphism (SSCP) analysis

[32269] Animal model experiments lend further support to the function of KIT. Signaling from the KIT receptor tyrosine

kinase is essential for primordial germ cell growth both in vivo and in vitro. Many downstream effectors of the KIT signaling pathway have been identified in other cell types, but how these molecules control primordial germ cell survival and proliferation are unknown. Determination of the KIT effectors acting in primoridial germ cells has been hampered by the lack of effective methods to manipulate easily gene expression in these cells. De Miguel et al. (2002) overcame this problem by testing the efficacy of retroviral- mediated gene transfer for manipulating gene expression in mammalian germ cells. They found that primordial germ cells can successfully be infected with a variety of types of retroviruses. They used this method to demonstrate an important role of the AKT1 (OMIM Ref. No. 164730) in regulating primordial germ cell growth

[32270] It is appreciated that the abovementioned animal model for KIT is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[32271] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32272] Poduslo, S. E.; Dean, M.; Kolch, U.; O'Brien, S. J. : Detecting

high- resolution polymorphisms in human coding loci by combining PCR and single- strand conformation polymorphism (SSCP) analysis. Am. J. Hum. Genet. 49: 106- 111, 1991. ; and

[32273] De Miguel, M. P.; Cheng, L.; Holland, E. C.; Federspiel, M. J.; Donovan, P. J. : Dissection of the c- Kit signaling pathway in mouse primordial germ cells by retroviral- mediated gene tran.

[32274] Further studies establishing the function and utilities of KIT are found in John Hopkins OMIM database record ID 164920, and in cited publications listed in Table 5, which are hereby incorporated by reference.Lysosomal-associated membrane protein 2 (LAMP2, Accession NP_054701.1) is another GAM193 target gene, herein designated TARGET GENE. LAMP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LAMP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMP2 BINDING SITE, designated SEQ ID:1978, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32275] Another function of GAM193 is therefore inhibition of Lysosomal-associated membrane protein 2 (LAMP2, Accession NP_054701.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP2.

[32276] LOC115548 (Accession XP_291142.1) is another GAM193 target gene, herein designated TARGET GENE. LOC115548 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC115548, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115548 BINDING SITE, designated SEQ ID:13272, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32277] Another function of GAM193 is therefore inhibition of LOC115548 (Accession XP_291142.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115548.

[32278] LOC142955 (Accession XP_084389.1) is another GAM193 target gene, herein designated TARGET GENE. LOC142955 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC142955, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142955 BINDING SITE, designated SEQ ID:5300, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32279] Another function of GAM193 is therefore inhibition of LOC142955 (Accession XP_084389.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142955.

[32280] LOC146517 (Accession XP_085491.1) is another GAM193 target gene, herein designated TARGET GENE. LOC146517 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146517, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146517 BINDING SITE, designated SEQ ID:19666, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32281] Another function of GAM193 is therefore inhibition of

LOC146517 (Accession XP_085491.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146517.

[32282] LOC149684 (Accession XP_097710.1) is another GAM193 target gene, herein designated TARGET GENE. LOC149684 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149684, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149684 BINDING SITE, designated SEQ ID:17873, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32283] Another function of GAM193 is therefore inhibition of LOC149684 (Accession XP_097710.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149684.

[32284] LOC152200 (Accession XP_098174.1) is another GAM193 target gene, herein designated TARGET GENE. LOC152200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152200, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152200 BINDING SITE, designated SEQ ID:17088, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32285] Another function of GAM193 is therefore inhibition of LOC152200 (Accession XP_098174.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152200.

[32286] LOC219392 (Accession XP_165921.1) is another GAM193 target gene, herein designated TARGET GENE. LOC219392 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219392, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219392 BINDING SITE, designated SEQ ID:19644, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32287] Another function of GAM193 is therefore inhibition of LOC219392 (Accession XP_165921.1) . Accordingly, utili-

ties of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219392.

[32288] LOC254100 (Accession XP_172851.1) is another GAM193 target gene, herein designated TARGET GENE. LOC254100 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254100, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254100 BINDING SITE, designated SEQ ID:8379, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32289] Another function of GAM193 is therefore inhibition of LOC254100 (Accession XP_172851.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254100.

[32290] LOC284020 (Accession XP_208151.1) is another GAM193 target gene, herein designated TARGET GENE. LOC284020 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284020, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284020 BINDING SITE, designated SEQ ID:12022, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32291] Another function of GAM193 is therefore inhibition of LOC284020 (Accession XP_208151.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284020.

[32292] LOC338597 (Accession XP_290482.1) is another GAM193 target gene, herein designated TARGET GENE. LOC338597 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338597 BINDING SITE, designated SEQ ID:13628, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32293] Another function of GAM193 is therefore inhibition of LOC338597 (Accession XP_290482.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC338597.

[32294] LOC338739 (Accession XP_294690.1) is another GAM193 target gene, herein designated TARGET GENE. LOC338739 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338739, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338739 BINDING SITE, designated SEQ ID:17845, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32295] Another function of GAM193 is therefore inhibition of LOC338739 (Accession XP_294690.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338739.

[32296] LOC338961 (Accession XP_294753.1) is another GAM193 target gene, herein designated TARGET GENE. LOC338961 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338961, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC338961 BINDING SITE, designated SEQ ID:12926, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32297] Another function of GAM193 is therefore inhibition of LOC338961 (Accession XP_294753.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338961.

[32298] LOC339003 (Accession XP_290660.1) is another GAM193 target gene, herein designated TARGET GENE. LOC339003 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339003, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339003 BINDING SITE, designated SEQ ID:10159, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32299] Another function of GAM193 is therefore inhibition of LOC339003 (Accession XP_290660.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC339003.

[32300] LOC339952 (Accession XP_295110.1) is another GAM193 target gene, herein designated TARGET GENE. LOC339952 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339952 BINDING SITE, designated SEQ ID:2352, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32301] Another function of GAM193 is therefore inhibition of LOC339952 (Accession XP_295110.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339952.

[32302] LOC347774 (Accession XP_290475.1) is another GAM193 target gene, herein designated TARGET GENE. LOC347774 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC347774, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC347774 BINDING SITE, designated SEQ ID:13628, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32303] Another function of GAM193 is therefore inhibition of LOC347774 (Accession XP_290475.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347774.

[32304] LOC349277 (Accession XP_303016.1) is another GAM193 target gene, herein designated TARGET GENE. LOC349277 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349277, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349277 BINDING SITE, designated SEQ ID:3953, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32305] Another function of GAM193 is therefore inhibition of LOC349277 (Accession XP_303016.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349277.

[32306] LOC349299 (Accession XP_303021.1) is another GAM193 target gene, herein designated TARGET GENE. LOC349299 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349299 BINDING SITE, designated SEQ ID:3953, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32307] Another function of GAM193 is therefore inhibition of LOC349299 (Accession XP_303021.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349299.

[32308] LOC54103 (Accession XP_168508.4) is another GAM193 target gene, herein designated TARGET GENE. LOC54103 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC54103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC54103 BINDING SITE, designated SEQ ID:12980, to the

nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32309] Another function of GAM193 is therefore inhibition of LOC54103 (Accession XP_168508.4) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC54103.

[32310] LOC91149 (Accession XP_036480.1) is another GAM193 target gene, herein designated TARGET GENE. LOC91149 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91149 BINDING SITE, designated SEQ ID:6578, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32311] Another function of GAM193 is therefore inhibition of LOC91149 (Accession XP_036480.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91149.

[32312] LOC92497 (Accession XP_045436.1) is another GAM193

target gene, herein designated TARGET GENE. LOC92497 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC92497, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92497 BINDING SITE, designated SEQ ID:16786, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32313] Another function of GAM193 is therefore inhibition of LOC92497 (Accession XP_045436.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92497.

[32314] Lim domain containing preferred translocation partner in lipoma (LPP, Accession NP_005569.1) is another GAM193 target gene, herein designated TARGET GENE. LPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LPP BINDING SITE, designated SEQ ID:14339, to the nucleotide se-

quence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32315] Another function of GAM193 is therefore inhibition of Lim domain containing preferred translocation partner in lipoma (LPP, Accession NP_005569.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LPP.

[32316] Methyl cpg binding protein 2 (rett syndrome) (MECP2, Accession NP_004983.1) is another GAM193 target gene, herein designated TARGET GENE. MECP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MECP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MECP2 BINDING SITE, designated SEQ ID:10015, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32317] Another function of GAM193 is therefore inhibition of Methyl cpg binding protein 2 (rett syndrome) (MECP2, Accession NP_004983.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with MECP2.

[32318] MGC14353 (Accession NP_116120.1) is another GAM193 target gene, herein designated TARGET GENE. MGC14353 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14353, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14353 BINDING SITE, designated SEQ ID:10146, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32319] Another function of GAM193 is therefore inhibition of MGC14353 (Accession NP_116120.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14353.

[32320] MGC2776 (Accession NP_079541.1) is another GAM193 target gene, herein designated TARGET GENE. MGC2776 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2776, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC2776 BINDING SITE, designated SEQ ID:2621, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32321] Another function of GAM193 is therefore inhibition of MGC2776 (Accession NP_079541.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2776.

[32322] Makorin, ring finger protein, 3 (MKRN3, Accession NP_005655.1) is another GAM193 target gene, herein designated TARGET GENE. MKRN3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MKRN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MKRN3 BINDING SITE, designated SEQ ID:3557, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32323] Another function of GAM193 is therefore inhibition of Makorin, ring finger protein, 3 (MKRN3, Accession NP_005655.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MKRN3.

[32324] MU (Accession NP_071368.1) is another GAM193 target gene, herein designated TARGET GENE. MU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MU BINDING SITE, designated SEQ ID:2785, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32325] Another function of GAM193 is therefore inhibition of MU (Accession NP_071368.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MU.

[32326] Neuroligin 4, y linked (NLGN4Y, Accession NP_055708.1) is another GAM193 target gene, herein designated TARGET GENE. NLGN4Y BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NLGN4Y, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NLGN4Y BINDING SITE, designated SEQ ID:6577, to the nucleotide sequence of GAM193 RNA,

herein designated GAM RNA, also designated SEQ ID:268.

[32327] Another function of GAM193 is therefore inhibition of Neuroligin 4, y linked (NLGN4Y, Accession NP_055708.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NLGN4Y.

[32328] Neuropeptide y (NPY, Accession NP_000896.1) is another GAM193 target gene, herein designated TARGET GENE. NPY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NPY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPY BINDING SITE, designated SEQ ID:549, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32329] Another function of GAM193 is therefore inhibition of Neuropeptide y (NPY, Accession NP_000896.1), a gene which is implicated in the control of feeding and in the secretion of gonadotrophin- release hormone. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPY.

[32330] The function of NPY has been established by previous studies. Hansel et al. (2001) identified a role for NPY in promoting proliferation of postnatal neuronal precursor cells. NPY is synthesized in the postnatal olfactory epithelium by sustentacular cells, previously proposed to function only in structural support. Mice with a targeted deletion of NPY contained half as many dividing olfactory neuronal precursor cells as did controls. Furthermore, NPY-deficient mice developed significantly fewer olfactory neurons by adulthood. NPY acts on multipotent neuronal precursor or basal cells to activate rapidly and transiently the extracellular signal- regulated kinase (ERK) 1/2 (OMIM Ref. No. 601795) subgroup of mitogen- activated protein kinases. The NPY Y1 receptor subtype (OMIM Ref. No. 162641) appears to mediate this effect. The ability of NPY to induce neuronal precursor proliferation is mediated by protein kinase C (PKC; 176960), indicating an upstream PKC- dependent activation of ERK1/2. These results indicate that NPY may regulate neuronal precursor proliferation in the adult mammal.

[32331] Animal model experiments lend further support to the function of NPY. Neuropeptide Y is a neuromodulator implicated in the control of energy balance and is overpro-

duced in the hypothalamus of ob/ob mice. To determine the role of NPY in the response to leptin (OMIM Ref. No. 164160) deficiency, Erickson et al. (1996) generated ob/ob mice deficient in NPY. In the absence of NPY, ob/ob mice were less obese because of reduced food intake and increased energy expenditure, and were less severely affected by diabetes, sterility, and somatotropic defects. These results were interpreted as indicating that NPY is a central effector of leptin deficiency.

[32332] It is appreciated that the abovementioned animal model for NPY is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[32333] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32334] Erickson, J. C.; Hollopeter, G.; Palmiter, R. D. : Attenuation of the obesity syndrome of ob/ob mice by the loss of neuropeptide Y. Science 274: 1704- 1706, 1996. ; and

[32335] Hansel, D. E.; Eipper, B. A.; Ronnett, G. V. : Neuropeptide Y functions as a neuroproliferative factor. Nature 410: 940- 943, 2001.

[32336] Further studies establishing the function and utilities of

NPY are found in John Hopkins OMIM database record ID 162640, and in cited publications listed in Table 5, which are hereby incorporated by reference.P114-RHO-GEF (Accession NP_056133.1) is another GAM193 target gene, herein designated TARGET GENE. P114-RHO-GEF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P114-RHO-GEF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P114-RHO-GEF BINDING SITE, designated SEQ ID:6818, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32337] Another function of GAM193 is therefore inhibition of P114-RHO-GEF (Accession NP_056133.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P114-RHO-GEF.

[32338] Pyruvate dehydrogenase kinase, isoenzyme 3 (PDK3, Accession NP_005382.1) is another GAM193 target gene, herein designated TARGET GENE. PDK3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDK3, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDK3 BINDING SITE, designated SEQ ID:13449, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32339] Another function of GAM193 is therefore inhibition of Pyruvate dehydrogenase kinase, isoenzyme 3 (PDK3, Accession NP_005382.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDK3.

[32340] Protein kinase (camp-dependent, catalytic) inhibitor alpha (PKIA, Accession NP_006814.1) is another GAM193 target gene, herein designated TARGET GENE. PKIA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PKIA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKIA BINDING SITE, designated SEQ ID:11912, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32341] Another function of GAM193 is therefore inhibition of

Protein kinase (camp-dependent, catalytic) inhibitor alpha (PKIA, Accession NP_006814.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKIA.

[32342] Pou domain, class 2, associating factor 1 (POU2AF1, Accession NP_006226.1) is another GAM193 target gene, herein designated TARGET GENE. POU2AF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POU2AF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU2AF1 BINDING SITE, designated SEQ ID:3129, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32343] Another function of GAM193 is therefore inhibition of Pou domain, class 2, associating factor 1 (POU2AF1, Accession NP_006226.1), a gene which is a transcriptional coactivator that specifically associates with either oct1 or oct2 and therefore may be associated with A form of b- cell leukemia. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of A form of b- cell leukemia, and of other diseases and clinical conditions

associated with POU2AF1.

[32344] The function of POU2AF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.RCBTB1 (Accession NP_060661.2) is another GAM193 target gene, herein designated TARGET GENE. RCBTB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RCBTB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RCBTB1 BINDING SITE, designated SEQ ID:13748, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32345] Another function of GAM193 is therefore inhibition of RCBTB1 (Accession NP_060661.2) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RCBTB1.

[32346] Restin (reed-steinberg cell-expressed intermediate filament-associated protein) (RSN, Accession NP_002947.1) is another GAM193 target gene, herein designated TARGET GENE. RSN BINDING SITE is a target binding site found

in the 3` untranslated region of mRNA encoded by RSN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RSN BINDING SITE, designated SEQ ID:9415, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32347] Another function of GAM193 is therefore inhibition of Restin (reed-steinberg cell-expressed intermediate filament-associated protein) (RSN, Accession NP_002947.1), a gene which seems to be a intermediate filament associated protein that links endocytic vesicles to microtubules. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RSN.

[32348] The function of RSN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Sel-1 suppressor of lin-12-like (c. elegans) (SEL1L, Accession NP_005056.3) is another GAM193 target gene, herein designated TARGET GENE. SEL1L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEL1L, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEL1L BINDING SITE, designated SEQ ID:1707, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32349] Another function of GAM193 is therefore inhibition of Sel-1 suppressor of lin-12-like (c. elegans) (SEL1L, Accession NP_005056.3), a gene which may play a role in notch signaling (by similarity). Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEL1L.

[32350] The function of SEL1L has been established by previous studies. Biunno et al. (1997) isolated a novel cDNA, designated SEL1L by them, that shows sequence similarities to sel- 1, a gene identified as an extragenic suppressor of the lin- 12 hypomorphic mutant from C. elegans (3,4:Grant and Greenwald, 1996, 1997). SEL1L exhibited a tissue- specific pattern of expression: high levels of a single 7.5- kb transcript were detected only in the pancreas of healthy individuals, whereas low to undetectable levels were observed in other adult tissues and in some fetal tissues. Because of the tissue- specific expression of the

gene, Biunno et al. (1997) studied the gene in human pancreatic carcinomas. They found that 17% of adenocarcinomas of the pancreas did not express SEL1L to a detectable level; however, no gross genomic alterations were apparent within a few hundred kb of the relevant region. By somatic cell hybrid analysis and fluorescence in situ hybridization, Biunno et al. (1997) mapped the SEL1L gene to chromosome 14q31. Donoviel and Bernstein (1999) localized the gene to 14q24.3- q31 by FISH and radiation hybrid analysis.

[32351]

[32352] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32353] Biunno, I.; Appierto, V.; Cattaneo, M.; Leone, B. E.; Balzano, G.; Socci, C.; Saccone, S.; Letizia, A.; Valle, G. D.; Sgaramella, V. : Isolation of a pancreas- specific gene located on human chromosome 14q31: expression analysis in human pancreatic ductal carcinomas. Genomics 46: 284- 286, 1997. ; and

[32354] Donoviel, D. B.; Bernstein, A. : SEL- 1L maps to human chromosome 14, near the insulin- dependent diabetes mellitus locus 11. Genomics 56: 232- 233, 1999.

[32355] Further studies establishing the function and utilities of SEL1L are found in John Hopkins OMIM database record ID 602329, and in cited publications listed in Table 5, which are hereby incorporated by refer-ence.Serum/glucocorticoid regulated kinase-like (SGKL, Accession NP_037389.4) is another GAM193 target gene, herein designated TARGET GENE. SGKL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SGKL, corre-sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-trates the complementarity of the nucleotide sequences of SGKL BINDING SITE, designated SEQ ID:19551, to the nu-cleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32356] Another function of GAM193 is therefore inhibition of Serum/glucocorticoid regulated kinase-like (SGKL, Acces-sion NP_037389.4) . Accordingly, utilities of GAM193 in-clude diagnosis, prevention and treatment of diseases and clinical conditions associated with SGKL.

[32357] Serum/glucocorticoid regulated kinase-like (SGKL, Acces-sion NP_733827.2) is another GAM193 target gene, herein designated TARGET GENE. SGKL BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SGKL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SGKL BINDING SITE, designated SEQ ID:19551, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32358] Another function of GAM193 is therefore inhibition of Serum/glucocorticoid regulated kinase-like (SGKL, Accession NP_733827.2) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SGKL.

[32359] SIMP (Accession XP_114346.2) is another GAM193 target gene, herein designated TARGET GENE. SIMP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIMP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIMP BINDING SITE, designated SEQ ID:20030, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32360] Another function of GAM193 is therefore inhibition of SIMP (Accession XP_114346.2) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIMP.

[32361] Solute carrier family 12 (sodium/potassium/chloride transporters), member 2 (SLC12A2, Accession NP_001037.1) is another GAM193 target gene, herein designated TARGET GENE. SLC12A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC12A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC12A2 BINDING SITE, designated SEQ ID:2850, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32362] Another function of GAM193 is therefore inhibition of Solute carrier family 12 (sodium/potassium/chloride transporters), member 2 (SLC12A2, Accession NP_001037.1), a gene which transports chloride ions across secretory epithelia. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC12A2.

[32363] The function of SLC12A2 has been established by previous studies. By moving chloride into epithelial cells, the Na- K- Cl cotransporter aids transcellular movement of chloride across both secretory and absorptive epithelia. Using cDNA probes from the elasmobranch secretory Na-K- Cl cotransporter reported by Xu et al. (1994), Payne et al. (1995) identified the human homolog, which they referred to as NKCC1. By screening cDNA libraries of a human colonic carcinoma cell line, they identified a sequence of 4,115 bases that encoded a deduced protein of 1,212 amino acids with 12 transmembrane segments. By fluorescence in situ hybridization, they localized the cotransporter gene to 5q23.3. Human embryonic kidney cells stably transfected with the full- length cDNA expressed a protein of approximately 170 kD which was recognized by anti- cotransporter antibodies. Following treatment with N- glycosidase F, the molecular mass of the expressed protein was similar to that predicted for the core protein from the cDNA sequence. Evans et al. (2000) tested directly the possibility that the salivary fluid secretory mechanism requires Na+/K+/2Cl- cotransporter-mediated Cl- uptake. They studied the in vivo and in vitro functioning of acinar cells from the parotid glands of mice

with targeted disruption of the Nkcc1 gene, which encodes the salivary cotransporter. In wildtype mice Nkcc1 was localized to the basolateral membranes of parotid acinar cells, whereas expression was not detected in duct cells. The lack of functional Nkcc1 resulted in a dramatic reduction (greater than 60%) in the volume of saliva secreted in response to a muscarinic agonist, the primary in situ salivation signal. Expression of the chloride/bicarbonate exchanger AE2 (SLC4A2; 109280) was enhanced, suggesting that this transporter compensates for the loss of functional Nkcc1. The ability of the parotid gland to conserve NaCl was abolished in Nkcc1- deficient mice. Evans et al. (2000) suggested that some cases of 'idiopathic' dry mouth disease may have a basis in a defect of Nkcc1.

[32364]

[32365] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32366] Payne, J. A.; Xu, J.- C.; Haas, M.; Lytle, C. Y.; Ward, D.; Forbush, B., III : Primary structure, functional expression, and chromosomal localization of the bumetanide- sensitive Na- K- Cl cotransporter in human colon. J. Biol.

Chem. 270: 17977- 17985, 1995. ; and

[32367] Evans, R. L.; Park, K.; Turner, R. J.; Watson, G. E.; Nguyen, H.- V.; Dennett, M. R.; Hand, A. R.; Flagella, M.; Shull, G. E.; Melvin, J. E. : Severe impairment of salivation in Na+/K+/2Cl.

[32368] Further studies establishing the function and utilities of SLC12A2 are found in John Hopkins OMIM database record ID 600840, and in cited publications listed in Table 5, which are hereby incorporated by reference.Solute carrier family 16 (monocarboxylic acid transporters), member 6 (SLC16A6, Accession NP_004685.1) is another GAM193 target gene, herein designated TARGET GENE. SLC16A6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC16A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC16A6 BINDING SITE, designated SEQ ID:2622, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32369] Another function of GAM193 is therefore inhibition of Solute carrier family 16 (monocarboxylic acid transporters), member 6 (SLC16A6, Accession NP_004685.1) . Accord-

ingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC16A6.

[32370] Solute carrier family 6 (neurotransmitter transporter, dopamine), member 3 (SLC6A3, Accession NP_001035.1) is another GAM193 target gene, herein designated TARGET GENE. SLC6A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A3 BINDING SITE, designated SEQ ID:9121, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32371] Another function of GAM193 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter, dopamine), member 3 (SLC6A3, Accession NP_001035.1), a gene which terminates the action of dopamine by its high affinity sodium- dependent reuptake into presynaptic terminals. Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A3.

[32372] The function of SLC6A3 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.SMARCAD1 (Accession NP_064544.1) is another GAM193 target gene, herein designated TARGET GENE. SMARCAD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SMARCAD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMARCAD1 BINDING SITE, designated SEQ ID:8809, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32373] Another function of GAM193 is therefore inhibition of SMARCAD1 (Accession NP_064544.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMARCAD1.

[32374] ST18 (Accession NP_055497.1) is another GAM193 target gene, herein designated TARGET GENE. ST18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ST18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ST18 BINDING SITE, designated SEQ ID:4579, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32375] Another function of GAM193 is therefore inhibition of ST18 (Accession NP_055497.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ST18.

[32376] Staufen, rna binding protein, homolog 2 (drosophila) (STAU2, Accession NP_055208.1) is another GAM193 target gene, herein designated TARGET GENE. STAU2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STAU2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAU2 BINDING SITE, designated SEQ ID:19453, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32377] Another function of GAM193 is therefore inhibition of Staufen, rna binding protein, homolog 2 (drosophila) (STAU2, Accession NP_055208.1) . Accordingly, utilities of

GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU2.

[32378] Stanniocalcin 2 (STC2, Accession NP_003705.1) is another GAM193 target gene, herein designated TARGET GENE. STC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STC2 BINDING SITE, designated SEQ ID:696, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32379] Another function of GAM193 is therefore inhibition of Stanniocalcin 2 (STC2, Accession NP_003705.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STC2.

[32380] Tubulointerstitial nephritis antigen (TINAG, Accession NP_055279.1) is another GAM193 target gene, herein designated TARGET GENE. TINAG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TINAG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TINAG BINDING SITE, designated SEQ ID:12710, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32381] Another function of GAM193 is therefore inhibition of Tubulointerstitial nephritis antigen (TINAG, Accession NP_055279.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TINAG.

[32382] Unc-51-like kinase 2 (c. elegans) (ULK2, Accession NP_055498.2) is another GAM193 target gene, herein designated TARGET GENE. ULK2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ULK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ULK2 BINDING SITE, designated SEQ ID:17181, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32383] Another function of GAM193 is therefore inhibition of Unc-51-like kinase 2 (c. elegans) (ULK2, Accession

NP_055498.2) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ULK2.

[32384] ZAK (Accession NP_598407.1) is another GAM193 target gene, herein designated TARGET GENE. ZAK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZAK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZAK BINDING SITE, designated SEQ ID:7242, to the nucleotide sequence of GAM193 RNA, herein designated GAM RNA, also designated SEQ ID:268.

[32385] Another function of GAM193 is therefore inhibition of ZAK (Accession NP_598407.1) . Accordingly, utilities of GAM193 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAK.

[32386]

[32387] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 194 (GAM194), which modulates expression of respective target genes thereof, the function and utility of which target

genes is known in the art.

[32388] GAM194 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM194 was detected is described hereinabove with reference to Figs. 8-15.

[32389] GAM194 gene, herein designated GAM GENE, and GAM194 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[32390] GAM194 gene encodes a GAM194 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM194 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM194 precursor RNA is designated SEQ ID:40, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:40 is located at position 49043012 relative to chromosome 13.

[32391] GAM194 precursor RNA folds onto itself, forming GAM194 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first

half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[32392] GAM194 precursor RNA folds onto itself, forming GAM194 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[32393] Nucleotide sequence of GAM194 precursor RNA, designated SEQ-ID: 40, and a schematic representation of a predicted secondary folding of GAM194 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[32394] An enzyme complex designated DICER COMPLEX, `dices` the GAM194 folded precursor RNA into GAM194 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex

comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM194 RNA is designated SEQ ID:350, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[32395] GAM194 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM194 target RNA, herein designated GAM TARGET RNA. GAM194 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[32396] GAM194 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM194 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM194 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated

that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM194 RNA may have a different number of target binding sites in untranslated regions of a GAM194 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[32397] The complementary binding of GAM194 RNA, herein designated GAM RNA, to target binding sites on GAM194 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM194 target RNA into GAM194 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[32398] It is appreciated that GAM194 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM194 target genes. The mRNA of each one of this plurality of GAM194 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM194 RNA, herein designated GAM RNA, and which when bound by

GAM194 RNA causes inhibition of translation of respective one or more GAM194 target proteins.

[32399] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM194 gene, herein designated GAM GENE, on one or more GAM194 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[32400] It is appreciated that specific functions and accordingly utilities of GAM194 correlate with, and may be deduced from, the identity of the target genes which GAM194 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[32401]

[32402]

[32403] FLJ10716 (Accession NM_018191.2) is a GAM194 target gene, herein designated TARGET GENE. FLJ10716 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10716, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10716 BINDING SITE, designated SEQ ID:11429, to the nucleotide sequence of GAM194 RNA, herein designated GAM RNA, also designated SEQ ID:350.

[32404] A function of GAM194 is therefore inhibition of FLJ10716 (Accession NM_018191.2) . Accordingly, utilities of GAM194 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10716.

[32405]

[32406] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 195 (GAM195), which modulates expression of respective target genes thereof, the function and utility of which target

genes is known in the art.

[32407] GAM195 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM195 was detected is described hereinabove with reference to Figs. 8-15.

[32408] GAM195 gene, herein designated GAM GENE, and GAM195 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[32409] GAM195 gene encodes a GAM195 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM195 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM195 precursor RNA is designated SEQ ID:122, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:122 is located at position 39124959 relative to chromosome 4.

[32410] GAM195 precursor RNA folds onto itself, forming GAM195 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first

half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[32411] GAM195 precursor RNA folds onto itself, forming GAM195 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[32412] Nucleotide sequence of GAM195 precursor RNA, designated SEQ-ID: 122, and a schematic representation of a predicted secondary folding of GAM195 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[32413] An enzyme complex designated DICER COMPLEX, `dices` the GAM195 folded precursor RNA into GAM195 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex

comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: B) nucleotide sequence of GAM195 RNA is designated SEQ ID:334, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[32414] GAM195 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM195 target RNA, herein designated GAM TARGET RNA. GAM195 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[32415] GAM195 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM195 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM195 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated

that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM195 RNA may have a different number of target binding sites in untranslated regions of a GAM195 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[32416] The complementary binding of GAM195 RNA, herein designated GAM RNA, to target binding sites on GAM195 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM195 target RNA into GAM195 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[32417] It is appreciated that GAM195 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM195 target genes. The mRNA of each one of this plurality of GAM195 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM195 RNA, herein designated GAM RNA, and which when bound by

GAM195 RNA causes inhibition of translation of respective one or more GAM195 target proteins.

[32418] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM195 gene, herein designated GAM GENE, on one or more GAM195 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[32419] It is appreciated that specific functions and accordingly utilities of GAM195 correlate with, and may be deduced from, the identity of the target genes which GAM195 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[32420]

[32421]

[32422] Atpase inhibitory factor 1 (ATPIF1, Accession NP_835497.1) is a GAM195 target gene, herein designated TARGET GENE. ATPIF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ATPIF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATPIF1 BINDING SITE, designated SEQ ID:13146, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32423] A function of GAM195 is therefore inhibition of Atpase inhibitory factor 1 (ATPIF1, Accession NP_835497.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATPIF1.

[32424] Atpase inhibitory factor 1 (ATPIF1, Accession NP_057395.1) is another GAM195 target gene, herein designated TARGET GENE. ATPIF1 BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by ATPIF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATPIF1 BINDING SITE, designated SEQ ID:13146, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32425] Another function of GAM195 is therefore inhibition of Atpase inhibitory factor 1 (ATPIF1, Accession NP_057395.1). Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATPIF1.

[32426] Atpase inhibitory factor 1 (ATPIF1, Accession NP_835498.1) is another GAM195 target gene, herein designated TARGET GENE. ATPIF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ATPIF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATPIF1 BINDING SITE, designated SEQ ID:13146, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32427] Another function of GAM195 is therefore inhibition of Atpase inhibitory factor 1 (ATPIF1, Accession NP_835498.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATPIF1.

[32428] Cat eye syndrome chromosome region, candidate 7 (CECR7, Accession XP_086803.1) is another GAM195 target gene, herein designated TARGET GENE. CECR7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CECR7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR7 BINDING SITE, designated SEQ ID:4000, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32429] Another function of GAM195 is therefore inhibition of Cat eye syndrome chromosome region, candidate 7 (CECR7, Accession XP_086803.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR7.

[32430] Desmocollin 1 (DSC1, Accession NP_004939.1) is another GAM195 target gene, herein designated TARGET GENE.

DSC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC1 BINDING SITE, designated SEQ ID:19861, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32431] Another function of GAM195 is therefore inhibition of Desmocollin 1 (DSC1, Accession NP_004939.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC1.

[32432] The function of DSC1 has been established by previous studies. The desmosome is a complex adhesive structure that plays a fundamental role in maintaining the strength and integrity of epithelial tissues. Central to this role are transmembrane glycoproteins that mediate cell- cell adhesion at the extracellular surface and interact with the cytoskeleton (via components of the desmosomal plaque), thus linking the intermediate filament networks of adja-

cent cells. Desmosomal glycoproteins comprise 2 distinct groups, the desmogleins and the desmocollins, both of which are members of the cadherin superfamily of Ca(2+)- dependent cell adhesion molecules. In the human, 2 types of desmocollins had been identified, symbolized DSC1 and DSC2 (OMIM Ref. No. 125645), and each occurs in 2 alternatively spliced forms (variants a and b) that have different cytoplasmic domains reflecting different interactions with components of the desmosomal plaque (Troyanovsky et al., 1993). King et al. (1993) isolated cDNA clones encoding a human desmocollin that is expressed in the more differentiated layers of human epidermis. This isoform has 53% amino acid identity with the previously isolated type 3 desmocollin, which is expressed in the basal layers of the epidermis. However, the N and C termini of the mature proteins are more highly conserved. Using a panel of somatic cell hybrids, King et al. (1993) assigned the DSC1 gene to chromosome 18, where the DSC2 gene and the 3 desmoglein genes (DSG1, 125670; DSG2, 125671; DSG3, 169615) had previously been mapped.

[32433]

[32434] Full details of the abovementioned studies are described

in the following publications, the disclosure of which are hereby incorporated by reference:

[32435] King, I. A.; Arnemann, J.; Spurr, N. K.; Buxton, R. S. : Cloning of the cDNA (DSC1) coding for human type 1 desmocollin and its assignment to chromosome 18. Genomics 18: 185- 194, 1993. ; and

[32436] Troyanovsky, S. M.; Eshkind, L. G.; Troyanovsky, R. B.; Leube, R. E.; Franke, W. W. : Contributions of cytoplasmic domains of desmosomal cadherins to desmosome assembly and intermediate.

[32437] Further studies establishing the function and utilities of DSC1 are found in John Hopkins OMIM database record ID 125643, and in cited publications listed in Table 5, which are hereby incorporated by reference.Desmocollin 1 (DSC1, Accession NP_077739.1) is another GAM195 target gene, herein designated TARGET GENE. DSC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC1 BINDING SITE, designated SEQ ID:19861, to the nucleotide sequence of GAM195 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:334.

[32438] Another function of GAM195 is therefore inhibition of Desmocollin 1 (DSC1, Accession NP_077739.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC1.

[32439] The function of DSC1 has been established by previous studies. The desmosome is a complex adhesive structure that plays a fundamental role in maintaining the strength and integrity of epithelial tissues. Central to this role are transmembrane glycoproteins that mediate cell- cell adhesion at the extracellular surface and interact with the cytoskeleton (via components of the desmosomal plaque), thus linking the intermediate filament networks of adjacent cells. Desmosomal glycoproteins comprise 2 distinct groups, the desmogleins and the desmocollins, both of which are members of the cadherin superfamily of Ca(2+)- dependent cell adhesion molecules. In the human, 2 types of desmocollins had been identified, symbolized DSC1 and DSC2 (OMIM Ref. No. 125645), and each occurs in 2 alternatively spliced forms (variants a and b) that have different cytoplasmic domains reflecting dif-

ferent interactions with components of the desmosomal plaque (Troyanovsky et al., 1993). King et al. (1993) isolated cDNA clones encoding a human desmocollin that is expressed in the more differentiated layers of human epidermis. This isoform has 53% amino acid identity with the previously isolated type 3 desmocollin, which is expressed in the basal layers of the epidermis. However, the N and C termini of the mature proteins are more highly conserved. Using a panel of somatic cell hybrids, King et al. (1993) assigned the DSC1 gene to chromosome 18, where the DSC2 gene and the 3 desmoglein genes (DSG1, 125670; DSG2, 125671; DSG3, 169615) had previously been mapped.

[32440]

[32441] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32442] King, I. A.; Arnemann, J.; Spurr, N. K.; Buxton, R. S. : Cloning of the cDNA (DSC1) coding for human type 1 desmocollin and its assignment to chromosome 18. Genomics 18: 185- 194, 1993. ; and

[32443] Troyanovsky, S. M.; Eshkind, L. G.; Troyanovsky, R. B.; Leube, R. E.; Franke, W. W. : Contributions of cytoplasmic

domains of desmosomal cadherins to desmosome assembly and intermediate.

[32444] Further studies establishing the function and utilities of DSC1 are found in John Hopkins OMIM database record ID 125643, and in cited publications listed in Table 5, which are hereby incorporated by reference.Fibroblast growth factor 2 (basic) (FGF2, Accession NP_001997.3) is another GAM195 target gene, herein designated TARGET GENE. FGF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FGF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF2 BINDING SITE, designated SEQ ID:18914, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32445] Another function of GAM195 is therefore inhibition of Fibroblast growth factor 2 (basic) (FGF2, Accession NP_001997.3), a gene which the Basic fibroblast growth factor 2; is mitogenic, angiogenic, and neurotrophic factor. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF2.

[32446] The function of FGF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM36.1.FLJ12787 (Accession NP_115551.1) is another GAM195 target gene, herein designated TARGET GENE. FLJ12787 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12787, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12787 BINDING SITE, designated SEQ ID:1139, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32447] Another function of GAM195 is therefore inhibition of FLJ12787 (Accession NP_115551.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12787.

[32448] FLJ20086 (Accession NP_060131.1) is another GAM195 target gene, herein designated TARGET GENE. FLJ20086 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20086, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20086 BINDING SITE, designated SEQ ID:11844, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32449] Another function of GAM195 is therefore inhibition of FLJ20086 (Accession NP_060131.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20086.

[32450] FLJ20727 (Accession NP_060414.2) is another GAM195 target gene, herein designated TARGET GENE. FLJ20727 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20727 BINDING SITE, designated SEQ ID:18778, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32451] Another function of GAM195 is therefore inhibition of FLJ20727 (Accession NP_060414.2) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20727.

[32452] FLJ21269 (Accession NP_079383.1) is another GAM195 target gene, herein designated TARGET GENE. FLJ21269 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21269, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21269 BINDING SITE, designated SEQ ID:2872, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32453] Another function of GAM195 is therefore inhibition of FLJ21269 (Accession NP_079383.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21269.

[32454] FLJ23749 (Accession NP_689484.1) is another GAM195 target gene, herein designated TARGET GENE. FLJ23749 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23749, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ23749 BINDING SITE, designated SEQ ID:1179, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32455] Another function of GAM195 is therefore inhibition of FLJ23749 (Accession NP_689484.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23749.

[32456] Gap junction protein, beta 2, 26kda (connexin 26) (GJB2, Accession NP_003995.1) is another GAM195 target gene, herein designated TARGET GENE. GJB2 BINDING SITE1 and GJB2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GJB2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GJB2 BINDING SITE1 and GJB2 BINDING SITE2, designated SEQ ID:18295 and SEQ ID:11557 respectively, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32457] Another function of GAM195 is therefore inhibition of Gap junction protein, beta 2, 26kda (connexin 26) (GJB2, Ac-

cession NP_003995.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GJB2.

[32458] Glypican 3 (GPC3, Accession NP_004475.1) is another GAM195 target gene, herein designated TARGET GENE. GPC3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPC3 BINDING SITE, designated SEQ ID:10408, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32459] Another function of GAM195 is therefore inhibition of Glypican 3 (GPC3, Accession NP_004475.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPC3.

[32460] Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_061128.1) is another GAM195 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA

encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:3607, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32461] Another function of GAM195 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_061128.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[32462] Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733937.1) is another GAM195 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:3607, to the nucleotide sequence of

GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32463] Another function of GAM195 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733937.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[32464] Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733938.1) is another GAM195 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:3607, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32465] Another function of GAM195 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733938.1) . Accordingly,

utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[32466] KIAA0173 (Accession NP_055455.1) is another GAM195 target gene, herein designated TARGET GENE. KIAA0173 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0173, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0173 BINDING SITE, designated SEQ ID:8331, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32467] Another function of GAM195 is therefore inhibition of KIAA0173 (Accession NP_055455.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0173.

[32468] KIAA1954 (Accession XP_085375.4) is another GAM195 target gene, herein designated TARGET GENE. KIAA1954 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1954, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1954 BINDING SITE, designated SEQ ID:16208, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32469] Another function of GAM195 is therefore inhibition of KIAA1954 (Accession XP_085375.4) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1954.

[32470] KIAA1972 (Accession XP_166279.1) is another GAM195 target gene, herein designated TARGET GENE. KIAA1972 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1972 BINDING SITE, designated SEQ ID:3715, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32471] Another function of GAM195 is therefore inhibition of KIAA1972 (Accession XP_166279.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1972.

[32472] LOC143891 (Accession XP_084661.3) is another GAM195 target gene, herein designated TARGET GENE. LOC143891 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC143891, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143891 BINDING SITE, designated SEQ ID:17605, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32473] Another function of GAM195 is therefore inhibition of LOC143891 (Accession XP_084661.3) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143891.

[32474] LOC145453 (Accession XP_085120.1) is another GAM195 target gene, herein designated TARGET GENE. LOC145453 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145453, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC145453 BINDING SITE, designated SEQ ID:1564, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32475] Another function of GAM195 is therefore inhibition of LOC145453 (Accession XP_085120.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145453.

[32476] LOC146443 (Accession XP_085461.6) is another GAM195 target gene, herein designated TARGET GENE. LOC146443 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146443, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146443 BINDING SITE, designated SEQ ID:4001, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32477] Another function of GAM195 is therefore inhibition of LOC146443 (Accession XP_085461.6) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC146443.

[32478] LOC151057 (Accession XP_097998.1) is another GAM195 target gene, herein designated TARGET GENE. LOC151057 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151057, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151057 BINDING SITE, designated SEQ ID:13828, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32479] Another function of GAM195 is therefore inhibition of LOC151057 (Accession XP_097998.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151057.

[32480] LOC284231 (Accession XP_208184.1) is another GAM195 target gene, herein designated TARGET GENE. LOC284231 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC284231 BINDING SITE, designated SEQ ID:4846, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32481] Another function of GAM195 is therefore inhibition of LOC284231 (Accession XP_208184.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284231.

[32482] LOC284396 (Accession XP_211452.1) is another GAM195 target gene, herein designated TARGET GENE. LOC284396 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284396, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284396 BINDING SITE, designated SEQ ID:13621, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32483] Another function of GAM195 is therefore inhibition of LOC284396 (Accession XP_211452.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284396.

[32484] LOC284927 (Accession XP_211689.1) is another GAM195 target gene, herein designated TARGET GENE. LOC284927 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284927, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284927 BINDING SITE, designated SEQ ID:1922, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32485] Another function of GAM195 is therefore inhibition of LOC284927 (Accession XP_211689.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284927.

[32486] LOC285953 (Accession XP_209820.1) is another GAM195 target gene, herein designated TARGET GENE. LOC285953 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285953, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285953 BINDING SITE, designated SEQ ID:2646, to

the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32487] Another function of GAM195 is therefore inhibition of LOC285953 (Accession XP_209820.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285953.

[32488] LOC286470 (Accession XP_212325.1) is another GAM195 target gene, herein designated TARGET GENE. LOC286470 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286470, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286470 BINDING SITE, designated SEQ ID:1532, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32489] Another function of GAM195 is therefore inhibition of LOC286470 (Accession XP_212325.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286470.

[32490] LOC339778 (Accession XP_295061.1) is another GAM195

target gene, herein designated TARGET GENE. LOC339778 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339778, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339778 BINDING SITE, designated SEQ ID:17583, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32491] Another function of GAM195 is therefore inhibition of LOC339778 (Accession XP_295061.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339778.

[32492] Metallothionein-like 5, testis-specific (tesmin) (MTL5, Accession NP_004914.1) is another GAM195 target gene, herein designated TARGET GENE. MTL5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTL5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTL5 BINDING SITE, designated SEQ ID:16748, to the nucleotide sequence of

GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32493] Another function of GAM195 is therefore inhibition of Metallothionein-like 5, testis-specific (tesmin) (MTL5, Accession NP_004914.1), a gene which functions in metal homeostasis and protects against heavy- metal toxicity. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTL5.

[32494] The function of MTL5 has been established by previous studies. By randomized RT- PCR on mRNA from mouse tissues, Sugihara et al. (1999) isolated a testis- specific transcript, which they called TF1. By screening a human testis cDNA library with TF1 as a probe, they cloned a novel cDNA, which they called testis- specific metallothionein- like protein, or tesmin. Tesmin encodes a predicted cysteine- rich, 295- amino acid protein that is 76.3% homologous to mouse tesmin. Sequence analysis revealed the presence of 2 metallothionein (MT)- like motifs. MT expression has been observed to be higher in testes than in liver tissue (Salehi- Ashtiani et al., 1993) and to be actively expressed in a developmentally regulated fashion in mouse male germ cells (De et al., 1991).

Tesmin shows no homology to other testis- specific genes. In situ hybridization of adult mouse testicular sections showed that expression of tesmin is restricted to spermatocytes. RT- PCR analysis on testicular transcripts from mice showed that expression of tesmin occurs as early as day 8 and coincides with the entry of germ cells in meiosis.

[32495]

[32496] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32497] De, S. K.; Enders, G. C.; Andrews, G. K. : High levels of metallothionein messenger RNAs in male germ cells of the adult mouse. Molec. Endocr. 5: 628- 636, 1991. ; and

[32498] Salehi- Ashtiani, K.; Widrow, R. J.; Markert, C. L.; Goldberg, E. : Testis- specific expression of a metallothionein I- driven transgene correlates with undermethylation of the locus in te.

[32499] Further studies establishing the function and utilities of MTL5 are found in John Hopkins OMIM database record ID 604374, and in cited publications listed in Table 5, which are hereby incorporated by reference.Neuronal cell adhesion molecule (NRCAM, Accession NP_005001.1) is an-

other GAM195 target gene, herein designated TARGET GENE. NRCAM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NR-CAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRCAM BINDING SITE, designated SEQ ID:1144, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32500] Another function of GAM195 is therefore inhibition of Neuronal cell adhesion molecule (NRCAM, Accession NP_005001.1), a gene which functions as a cell surface protein and belongs to the immunoglobulin superfamily. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRCAM.

[32501] The function of NRCAM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1.NUCKS (Accession NP_073568.1) is another GAM195 target gene, herein designated TARGET GENE. NUCKS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NUCKS, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUCKS BINDING SITE, designated SEQ ID:19959, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32502] Another function of GAM195 is therefore inhibition of NUCKS (Accession NP_073568.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUCKS.

[32503] Oligophrenin 1 (OPHN1, Accession NP_002538.1) is another GAM195 target gene, herein designated TARGET GENE. OPHN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OPHN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OPHN1 BINDING SITE, designated SEQ ID:1488, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32504] Another function of GAM195 is therefore inhibition of Oligophrenin 1 (OPHN1, Accession NP_002538.1) . Accordingly, utilities of GAM195 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with OPHN1.

[32505] P450RAI-2 (Accession NP_063938.1) is another GAM195 target gene, herein designated TARGET GENE. P450RAI-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P450RAI-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P450RAI-2 BINDING SITE, designated SEQ ID:14707, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32506] Another function of GAM195 is therefore inhibition of P450RAI-2 (Accession NP_063938.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P450RAI-2.

[32507] PDIP1 (Accession XP_170803.1) is another GAM195 target gene, herein designated TARGET GENE. PDIP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PDIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of PDIP1 BINDING SITE, designated SEQ ID:8489, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32508] Another function of GAM195 is therefore inhibition of PDIP1 (Accession XP_170803.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDIP1.

[32509] PDIP1 (Accession NP_849194.1) is another GAM195 target gene, herein designated TARGET GENE. PDIP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PDIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDIP1 BINDING SITE, designated SEQ ID:8489, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32510] Another function of GAM195 is therefore inhibition of PDIP1 (Accession NP_849194.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDIP1.

[32511] Plasminogen-like (PLGL, Accession NP_002656.1) is an-

other GAM195 target gene, herein designated TARGET GENE. PLGL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLGL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PLGL BINDING SITE, designated SEQ ID:2694, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32512] Another function of GAM195 is therefore inhibition of Plasminogen-like (PLGL, Accession NP_002656.1), a gene which is necessary for extracellular matrix destruction. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLGL.

[32513] The function of PLGL has been established by previous studies. Frank et al. (1989) used a plasminogen probe encoding kringles 1- 3 to detect homologous loci on human chromosomes 6 and 2 by somatic cell hybrid analysis. Regional localization by in situ hybridization placed the loci at 6q26- q27 and 2p11- q11. Further analysis by varying washing stringencies of hybridization filters showed greater homology with the chromosome 6 locus than with

the chromosome 2 locus. The results were interpreted as confirming localization of the plasminogen gene (OMIM Ref. No. 173350) to chromosome 6 and indicating that a homologous sequence of unknown identity is located on chromosome 2. The sequence on chromosome 2 may represent a pseudogene or it may be an unidentified kringle-containing protein. Magnaghi et al. (1995), in their Figure 3, presented a restriction map showing the orientation of the PLG and PLGL genes to each other and to the LPA gene (OMIM Ref. No. 152200) and the LPA- like gene.

[32514]

[32515] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32516] Frank, S. L.; Klisak, I.; Sparkes, R. S.; Lusis, A. J. : A gene homologous to plasminogen located on human chromosome 2q11- p11. Genomics 4: 449- 451, 1989. ; and

[32517] Magnaghi, P.; Agazzi, A.; Semino, O.; Ferrari, M.; Barbui, T.; D'Angelo, A.; Taramelli, R. : A recombination event in the closely linked plasminogen and apolipoprotein(a) gene loci. Cli.

[32518] Further studies establishing the function and utilities of PLGL are found in John Hopkins OMIM database record ID

173340, and in cited publications listed in Table 5, which are hereby incorporated by reference.RNF41 (Accession NP_005776.1) is another GAM195 target gene, herein designated TARGET GENE. RNF41 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF41, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF41 BINDING SITE, designated SEQ ID:14646, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32519] Another function of GAM195 is therefore inhibition of RNF41 (Accession NP_005776.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF41.

[32520] Sh3 and multiple ankyrin repeat domains 2 (SHANK2, Accession NP_036441.1) is another GAM195 target gene, herein designated TARGET GENE. SHANK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SHANK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of SHANK2 BINDING SITE, designated SEQ ID:11675, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32521] Another function of GAM195 is therefore inhibition of Sh3 and multiple ankyrin repeat domains 2 (SHANK2, Accession NP_036441.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHANK2.

[32522] Solute carrier family 38, member 2 (SLC38A2, Accession NP_061849.2) is another GAM195 target gene, herein designated TARGET GENE. SLC38A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC38A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC38A2 BINDING SITE, designated SEQ ID:451, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32523] Another function of GAM195 is therefore inhibition of Solute carrier family 38, member 2 (SLC38A2, Accession NP_061849.2), a gene which is an amino acid transporter.

Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC38A2.

[32524] The function of SLC38A2 has been established by previous studies. . Sugawara et al. (2000) cloned a rat skeletal muscle Ata2 cDNA. The deduced Ata2 protein shares 55% sequence identity with the rat glutamine transporter GlnT (Ata1). When expressed in mammalian cells, Ata2 mediated sodium- dependent transport of MeAIB. The Ata2 transporter was specific for neutral amino acids. It was pH- sensitive and lithium- intolerant. The sodium:amino acid stoichiometry was 1:1. When expressed in Xenopus oocytes, transport of neutral amino acids via Ata2 was associated with inward currents. The substrate- induced current was sodium- dependent and pH- sensitive. By screening human fetal brain cDNAs for the potential to encode large proteins, Nagase et al. (2000) isolated a partial ATA2 cDNA, which they called KIAA1382, that lacks 5-prime coding sequence. The deduced 462- amino acid ATA2 partial protein shares 57% amino acid sequence identity with the human transporter protein g17 across 98% of its length. RT- PCR followed by ELISA detected ATA2 expression in all human tissues examined, with the

highest level in adult brain. Within the brain, ATA2 expression was found in all regions tested, with the highest level in the subthalamic nucleus.

[32525]

[32526] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32527] Nagase, T.; Kikuno, R.; Ishikawa, K.; Hirosawa, M.; Ohara, O. : Prediction of the coding sequences of unidentified human genes. XVI. The complete sequences of 150 new cDNA clones from brain which code for large proteins in vitro. DNA Res. 7: 65- 73, 2000. ; and

[32528] Sugawara, M.; Nakanishi, T.; Fei, Y.- J.; Huang, W.; Ganapathy, M. E.; Leibach, F. H.; Ganapathy, V. : Cloning of an amino acid transporter with functional characteristics and tissue exp.

[32529] Further studies establishing the function and utilities of SLC38A2 are found in John Hopkins OMIM database record ID 605180, and in cited publications listed in Table 5, which are hereby incorporated by reference.Tripartite motif-containing 9 (TRIM9, Accession NP_443210.1) is another GAM195 target gene, herein designated TARGET GENE. TRIM9 BINDING SITE is a target binding site found

in the 3` untranslated region of multiple transcripts of mRNA encoded by TRIM9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM9 BINDING SITE, designated SEQ ID:10464, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32530] Another function of GAM195 is therefore inhibition of Tripartite motif-containing 9 (TRIM9, Accession NP_443210.1), a gene which may function as a positive regulator for mannosylphosphate transferase and is required to mediate mannosylphosphate transfer in both the core and outer chain portions of n- linked. oligosaccharides. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM9.

[32531] The function of TRIM9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Was protein family, member 3 (WASF3, Accession NP_006637.2) is another GAM195 target gene, herein designated TARGET GENE. WASF3 BINDING SITE is a

target binding site found in the 3` untranslated region of mRNA encoded by WASF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WASF3 BINDING SITE, designated SEQ ID:12232, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32532] Another function of GAM195 is therefore inhibition of Was protein family, member 3 (WASF3, Accession NP_006637.2), a gene which stimulates actin polymerization. Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WASF3.

[32533] The function of WASF3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Zinc finger protein 2 (a1-5) (ZNF2, Accession NP_066574.1) is another GAM195 target gene, herein designated TARGET GENE. ZNF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF2 BINDING SITE, designated SEQ ID:8545, to the nucleotide sequence of GAM195 RNA, herein designated GAM RNA, also designated SEQ ID:334.

[32534] Another function of GAM195 is therefore inhibition of Zinc finger protein 2 (a1-5) (ZNF2, Accession NP_066574.1) . Accordingly, utilities of GAM195 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF2.

[32535]

[32536] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 196 (GAM196), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[32537] GAM196 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM196 was detected is described hereinabove with reference to Figs. 8-15.

[32538] GAM196 gene, herein designated GAM GENE, and GAM196 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[32539] GAM196 gene encodes a GAM196 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM196 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM196 precursor RNA is designated SEQ ID:67, and is provided hereinbelow with reference to the sequence listing part.

[32540] GAM196 precursor RNA folds onto itself, forming GAM196 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[32541] GAM196 precursor RNA folds onto itself, forming GAM196 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first

half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[32542] Nucleotide sequence of GAM196 precursor RNA, designated SEQ-ID: 67, and a schematic representation of a predicted secondary folding of GAM196 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[32543] An enzyme complex designated DICER COMPLEX, `dices` the GAM196 folded precursor RNA into GAM196 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM196 RNA is designated SEQ ID:209, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[32544] GAM196 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM196 target RNA, herein designated GAM TARGET RNA. GAM196 tar-

get RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[32545] GAM196 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM196 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM196 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM196 RNA may have a different number of target binding sites in untranslated regions of a GAM196 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[32546] The complementary binding of GAM196 RNA, herein designated GAM RNA, to target binding sites on GAM196 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM196 target RNA into GAM196 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[32547] It is appreciated that GAM196 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM196 target genes. The mRNA of each one of this plurality of GAM196 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM196 RNA, herein designated GAM RNA, and which when bound by GAM196 RNA causes inhibition of translation of respective one or more GAM196 target proteins.

[32548] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM196 gene, herein designated GAM GENE, on one or more GAM196 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the back-

ground section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[32549] It is appreciated that specific functions and accordingly utilities of GAM196 correlate with, and may be deduced from, the identity of the target genes which GAM196 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[32550]

[32551]

[32552] Adaptor-related protein complex 1, mu 1 subunit (AP1M1, Accession NM_032493.2) is a GAM196 target gene, herein designated TARGET GENE. AP1M1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AP1M1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1M1 BINDING SITE, designated SEQ ID:18556, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32553] A function of GAM196 is therefore inhibition of Adaptor-related protein complex 1, mu 1 subunit (AP1M1, Accession NM_032493.2), a gene which promotes the formation of clathrin- coated pits and vesicles. Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1M1.

[32554] The function of AP1M1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Adaptor-related protein complex 1, sigma 1 subunit (AP1S1, Accession NM_057089.1) is another GAM196 target gene, herein designated TARGET GENE. AP1S1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AP1S1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1S1 BINDING SITE, designated

SEQ ID:1717, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32555] Another function of GAM196 is therefore inhibition of Adaptor-related protein complex 1, sigma 1 subunit (AP1S1, Accession NM_057089.1), a gene which promotes the formation of clathrin- coated pits and vesicles. Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1S1.

[32556] The function of AP1S1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Chloride channel 6 (CLCN6, Accession NM_021735.1) is another GAM196 target gene, herein designated TARGET GENE. CLCN6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CLCN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN6 BINDING SITE, designated SEQ ID:17159, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32557] Another function of GAM196 is therefore inhibition of Chloride channel 6 (CLCN6, Accession NM_021735.1), a gene which is a voltage- gated chloride channel. Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN6.

[32558] The function of CLCN6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.FLJ11722 (Accession NM_024970.1) is another GAM196 target gene, herein designated TARGET GENE. FLJ11722 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11722, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11722 BINDING SITE, designated SEQ ID:1140, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32559] Another function of GAM196 is therefore inhibition of FLJ11722 (Accession NM_024970.1) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ11722.

[32560] FLJ14107 (Accession NM_025026.1) is another GAM196 target gene, herein designated TARGET GENE. FLJ14107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14107 BINDING SITE, designated SEQ ID:17744, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32561] Another function of GAM196 is therefore inhibition of FLJ14107 (Accession NM_025026.1) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14107.

[32562] FLJ14280 (Accession NM_024886.1) is another GAM196 target gene, herein designated TARGET GENE. FLJ14280 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14280, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ14280 BINDING SITE, designated SEQ ID:2799, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32563] Another function of GAM196 is therefore inhibition of FLJ14280 (Accession NM_024886.1) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14280.

[32564] FLJ23447 (Accession NM_024825.1) is another GAM196 target gene, herein designated TARGET GENE. FLJ23447 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ23447, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23447 BINDING SITE, designated SEQ ID:7447, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32565] Another function of GAM196 is therefore inhibition of FLJ23447 (Accession NM_024825.1) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23447.

[32566] KIAA1691 (Accession XM_166523.1) is another GAM196 target gene, herein designated TARGET GENE. KIAA1691 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1691, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1691 BINDING SITE, designated SEQ ID:14970, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32567] Another function of GAM196 is therefore inhibition of KIAA1691 (Accession XM_166523.1) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1691.

[32568] KIAA1940 (Accession XM_086981.2) is another GAM196 target gene, herein designated TARGET GENE. KIAA1940 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1940, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1940 BINDING SITE, designated SEQ ID:12635, to the

nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32569] Another function of GAM196 is therefore inhibition of KIAA1940 (Accession XM_086981.2) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1940.

[32570] LOC138128 (Accession) is another GAM196 target gene, herein designated TARGET GENE. LOC138128 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC138128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC138128 BINDING SITE, designated SEQ ID:16109, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32571] Another function of GAM196 is therefore inhibition of LOC138128 (Accession) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC138128.

[32572] LOC149657 (Accession XM_097702.2) is another GAM196

target gene, herein designated TARGET GENE. LOC149657 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149657, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149657 BINDING SITE, designated SEQ ID:10864, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32573] Another function of GAM196 is therefore inhibition of LOC149657 (Accession XM_097702.2) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149657.

[32574] LOC150837 (Accession XM_087019.1) is another GAM196 target gene, herein designated TARGET GENE. LOC150837 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150837, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150837 BINDING SITE, designated SEQ ID:9457, to the nucleotide sequence of GAM196 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:209.

[32575] Another function of GAM196 is therefore inhibition of LOC150837 (Accession XM_087019.1) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150837.

[32576] LOC151556 (Accession) is another GAM196 target gene, herein designated TARGET GENE. LOC151556 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151556, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151556 BINDING SITE, designated SEQ ID:2480, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32577] Another function of GAM196 is therefore inhibition of LOC151556 (Accession) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151556.

[32578] LOC254016 (Accession) is another GAM196 target gene, herein designated TARGET GENE. LOC254016 BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254016, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254016 BINDING SITE, designated SEQ ID:17846, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32579] Another function of GAM196 is therefore inhibition of LOC254016 (Accession) . Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254016.

[32580] Nebulin-related anchoring protein (Nrap, Accession NM_006175.2) is another GAM196 target gene, herein designated TARGET GENE. Nrap BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Nrap, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Nrap BINDING SITE, designated SEQ ID:5880, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32581] Another function of GAM196 is therefore inhibition of Nebulin-related anchoring protein (Nrap, Accession NM_006175.2), a gene which performs an anchoring function to link the terminal actin filaments of myofibrils to protein complexes located beneath the sarcolemma. Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Nrap.

[32582] The function of Nrap and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Shb (src homology 2 domain containing) adaptor protein b (SHB, Accession NM_003028.1) is another GAM196 target gene, herein designated TARGET GENE. SHB BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SHB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHB BINDING SITE, designated SEQ ID:5017, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32583] Another function of GAM196 is therefore inhibition of Shb

(src homology 2 domain containing) adaptor protein b (SHB, Accession NM_003028.1), a gene which is an adaptor protein, mediates the interaction of other proteins. Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHB.

[32584] The function of SHB has been established by previous studies. Many proteins involved in the regulation of cellular proliferation contain sequence motifs named SH2 and SH3 (Pawson and Gish, 1992). These domains mediate interaction with other proteins; the SH2 domain interacts with tyrosine phosphorylation sites, while SH3 domains interact with proline- rich sequences. Many signal transduction pathways involve the induction of the formation of complexes of proteins such as growth factor receptors, adaptor proteins, and target enzymes through SH2 and SH3 interactions. Adaptor proteins are molecules with multiple protein interaction motifs that do not appear to have catalytic activity of their own but mediate the interaction of other proteins. The SHB gene encodes 2 such adaptor proteins (from 2 different start methionines) of 67 and 56 kD (Welsh et al., 1994). By PCR analysis of a somatic cell hybrid mapping panel, Yulug et al. (1994)

mapped the SHB gene to chromosome 9. By fluorescence in situ hybridization, they regionalized the gene to 9p12-p11.

[32585]

[32586] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32587] Welsh, M.; Mares, J.; Karlsson, T.; Lavergne, C.; Breant, B.; Claesson- Welsh, L. : Shb is a ubiquitously expressed Src homology 2 protein. Oncogene 9: 19- 27, 1994. ; and

[32588] Yulug, I. G.; Hillermann, R.; Fisher, E. M. C. : The SHB adaptor protein maps to human chromosome 9. Genomics 24: 615- 617, 1994.

[32589] Further studies establishing the function and utilities of SHB are found in John Hopkins OMIM database record ID 600314, and in cited publications listed in Table 5, which are hereby incorporated by reference.TSLP (Accession NM_033035.2) is another GAM196 target gene, herein designated TARGET GENE. TSLP BINDING SITE is a target binding site found in the 5` untranslated region of multi-ple transcripts of mRNA encoded by TSLP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of TSLP BINDING SITE, designated SEQ ID:8451, to the nucleotide sequence of GAM196 RNA, herein designated GAM RNA, also designated SEQ ID:209.

[32590] Another function of GAM196 is therefore inhibition of TSLP (Accession NM_033035.2), a gene which may contribute directly to the activation of Langerhans cells and inhibit apoptosis. Accordingly, utilities of GAM196 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSLP.

[32591] The function of TSLP has been established by previous studies. By EST and genomic database screening for sequences similar to IL7, followed by screening a lung fibroblast sarcoma cDNA library, Reche et al. (2001) obtained a cDNA encoding TSLP. The deduced 159- amino acid protein, which is only 43% identical to mouse Tslp, contains a 28- residue signal sequence, 6 cysteines, and 2 N- glycosylation sites. SDS- PAGE analysis showed expression of a 23- kD protein, larger than the predicted 15 kD, suggesting that TSLP is glycosylated. PCR analysis of a panel of cDNA libraries and cultured cell lines indicated that expression of a 1.3- kb TSLP transcript may be restricted to a few lung libraries. Reche et al. (2001) also

identified TSLP receptor, which is composed of TSLPR (CRLF2; 300357) and IL7R (OMIM Ref. No. 146661) subunits. Dendritic cells (DCs) and monocytes coexpress IL7R and TSLPR. Quentmeier et al. (2001) also cloned and characterized TSLP. They noted the presence of 7 basic C- terminal amino acids (KKRRKRK) in the protein and that 6 of the 7 cysteines in the mouse protein (those involved in disulfide bond formation) are conserved in human, whereas the sites for N- glycosylation are distinct. Northern blot analysis revealed wide expression of an approximately 1.1- kb transcript, with highest levels in heart, liver, testis, and prostate. Reche et al. (2001) showed that incubation of DCs or monocytes with TSLP enhanced the expression of CCL17 (OMIM Ref. No. 601520), CCL18 (OMIM Ref. No. 603757), CCL22 (OMIM Ref. No. 602957), and CCL19 (OMIM Ref. No. 602227). IL7, on the other hand, induced expression of CCL17, CCL22, and CCL19, but also CXCL8 (OMIM Ref. No. 146930), CXCL7 (OMIM Ref. No. 121010), CXCL5 (OMIM Ref. No. 600324), CXCL1 (OMIM Ref. No. 155730), CXCL2 (OMIM Ref. No. 139110), and CXCL3 (OMIM Ref. No. 139111). Functional analysis indicated that TSLP enhances the DC maturation process, as evidenced by upregulation of DC markers and costimu-

latory molecules and stronger T- cell proliferation. By screening myeloid cell lines, Quentmeier et al. (2001) established that an acute myeloid leukemia line, MUTZ- 3, responds by proliferating in response to TSLP. TSLP also inhibited apoptosis in these cells. Proliferation in response to TSLP could not be attributed to the production of other growth factors tested and could be inhibited by relatively high concentrations of anti- IL7R. TSLP, like IL7, stimulated phosphorylation of STAT5 (OMIM Ref. No. 601511), but unlike IL7, it did not activate JAK3 (OMIM Ref. No. 600173). TSLP did not phosphorylate mitogen- activated protein kinases (e.g., ERK1; 601795). By flow cytometric analysis, Soumelis et al. (2002) showed that TSLP- activated DCs (TSLP- DCs) express higher levels of HLA- DR and DCLAMP (OMIM Ref. No. 605883) than do nonactivated or IL7- activated DCs, and that TSLP- DCs induce marked proliferation and expansion of allogeneic naive CD4 (OMIM Ref. No. 186940)- positive T cells. Quantitative mRNA screening and ELISA analysis showed that TSLP- DCs do not produce detectable proinflammatory cytokines, but do produce high levels of TARC (CCL17) and MDC (CCL22) chemokines, which preferentially attract CCR4 (OMIM Ref. No. 604836)- expressing Th2 lympho-

cytes. TSLP- DCs induced CD4 cells to produce high amounts of IL13 (OMIM Ref. No. 147683), IL5 (OMIM Ref. No. 147850), and the proinflammatory cytokine tumor necrosis factor (TNF; 191160), but only low amounts of IL10 (OMIM Ref. No. 124092) and gamma- interferon (IFNG; 147570). RT- PCR analysis did not detect TSLP in most hemopoietic cells, the exception being mast cells. Keratinocytes, epithelial cells, smooth muscle cells, and lung fibroblasts also expressed high levels of TSLP. Within tonsils, highest levels were in crypt epithelial cells. Soumelis et al. (2002) suggested that TSLP may contribute to constitutive inflammation in this tissue and sporadic inflammation in squamous epithelium. Immunohistochemical analysis of allergic inflammatory tissue showed high expression of TSLP in keratinocytes of acute and chronic atopic dermatitis lesions, but no expression in normal skin. Strong TSLP expression in atopic dermatitis was associated with the disappearance of langerin (OMIM Ref. No. 604862)- positive Langerhans cells within the epidermis and the concurrent appearance of many DCLAMP- activated DCs within the dermis, many of which expressed langerin. Soumelis et al. (2002) proposed that TSLP expression by keratinocytes in atopic dermatitis le-

sions may contribute directly to the activation of Langerhans cells, which may migrate into the dermis and then the draining lymph nodes where they can prime allergen-specific Th2 responses.

[32592]

[32593] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32594] Reche, P. A.; Soumelis, V.; Gorman, D. M.; Clifford, T.; Liu, M.; Travis, M.; Zurawski, S. M.; Johnston, J.; Liu, Y.- J.; Spits, H.; de Waal Malefyt, R.; Kastelein, R. A.; Bazan, J. F. : Human thymic stromal lymphopoietin preferentially stimulates myeloid cells. J. Immun. 167: 336- 343, 2001. ; and

[32595] Soumelis, V.; Reche, P. A.; Kanzler, H.; Yuan, W.; Edward, G.; Homey, B.; Gilliet, M.; Ho, S.; Antonenko, S.; Lauerma, A.; Smith, K.; Gorman, D.; Zurawski, S.; Abrams, J.; Menon, S.; Mc.

[32596] Further studies establishing the function and utilities of TSLP are found in John Hopkins OMIM database record ID 607003, and in cited publications listed in Table 5, which are hereby incorporated by reference.

[32597] Fig. 8 further provides a conceptual description of a novel

bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 281 (GAM281), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[32598] GAM281 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM281 was detected is described hereinabove with reference to Figs. 8-15.

[32599] GAM281 gene, herein designated GAM GENE, and GAM281 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[32600] GAM281 gene encodes a GAM281 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM281 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM281 precursor RNA is designated SEQ ID:164, and is provided hereinbelow with reference to the sequence listing part.

[32601] GAM281 precursor RNA folds onto itself, forming GAM281 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin

structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[32602] GAM281 precursor RNA folds onto itself, forming GAM281 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[32603] Nucleotide sequence of GAM281 precursor RNA, designated SEQ-ID: 164, and a schematic representation of a predicted secondary folding of GAM281 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[32604] An enzyme complex designated DICER COMPLEX, `dices` the GAM281 folded precursor RNA into GAM281 RNA, herein designated GAM RNA, a single stranded ~22 nt

long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: B) nucleotide sequence of GAM281 RNA is designated SEQ ID:278, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[32605] GAM281 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM281 target RNA, herein designated GAM TARGET RNA. GAM281 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[32606] GAM281 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM281 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM281 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target

binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM281 RNA may have a different number of target binding sites in untranslated regions of a GAM281 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[32607] The complementary binding of GAM281 RNA, herein designated GAM RNA, to target binding sites on GAM281 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM281 target RNA into GAM281 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[32608] It is appreciated that GAM281 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM281 target genes. The mRNA of each one of this plurality of GAM281 target genes comprises one or more tar-

get binding sites, each having a nucleotide sequence which is at least partly complementary to GAM281 RNA, herein designated GAM RNA, and which when bound by GAM281 RNA causes inhibition of translation of respective one or more GAM281 target proteins.

[32609] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM281 gene, herein designated GAM GENE, on one or more GAM281 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[32610] It is appreciated that specific functions and accordingly utilities of GAM281 correlate with, and may be deduced

from, the identity of the target genes which GAM281 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[32611]

[32612]

[32613] (Accession NP_444285.1) is a GAM281 target gene, herein designated TARGET GENE. BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BINDING SITE, designated SEQ ID:13946, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32614] A function of GAM281 is therefore inhibition of (Accession NP_444285.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with .

[32615] 15E1.2 (Accession XP_290596.1) is another GAM281 target gene, herein designated TARGET GENE. 15E1.2 BINDING SITE is a target binding site found in the 3` untrans-

lated region of mRNA encoded by 15E1.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 15E1.2 BINDING SITE, designated SEQ ID:12868, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32616] Another function of GAM281 is therefore inhibition of 15E1.2 (Accession XP_290596.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 15E1.2.

[32617] Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2) is another GAM281 target gene, herein designated TARGET GENE. A1BG BINDING SITE1 and A1BG BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by A1BG, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A1BG BINDING SITE1 and A1BG BINDING SITE2, designated SEQ ID:18868 and SEQ ID:2534 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32618] Another function of GAM281 is therefore inhibition of Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2), a gene which a plasma protein of unknown function. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A1BG.

[32619] The function of A1BG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Aminoadipate-semialdehyde synthase (AASS, Accession NP_005754.2) is another GAM281 target gene, herein designated TARGET GENE. AASS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AASS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AASS BINDING SITE, designated SEQ ID:6339, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32620] Another function of GAM281 is therefore inhibition of Aminoadipate-semialdehyde synthase (AASS, Accession NP_005754.2) . Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with AASS.

[32621] ABCA13 (Accession NP_689914.2) is another GAM281 target gene, herein designated TARGET GENE. ABCA13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCA13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCA13 BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32622] Another function of GAM281 is therefore inhibition of ABCA13 (Accession NP_689914.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCA13.

[32623] Atp-binding cassette, sub-family c (cftr/mrp), member 11 (ABCC11, Accession NP_149163.2) is another GAM281 target gene, herein designated TARGET GENE. ABCC11 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ABCC11, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC11 BINDING SITE, designated SEQ ID:7022, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32624] Another function of GAM281 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 11 (ABCC11, Accession NP_149163.2), a gene which acts as a multispecific organic anion pump which can transport nucleotide analogs (by similarity). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC11.

[32625] The function of ABCC11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Actin binding lim protein 2 (ABLIM2, Accession NP_115808.1) is another GAM281 target gene, herein designated TARGET GENE. ABLIM2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ABLIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABLIM2 BINDING SITE, desig-

nated SEQ ID:3488, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32626] Another function of GAM281 is therefore inhibition of Actin binding lim protein 2 (ABLIM2, Accession NP_115808.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABLIM2.

[32627] Acyl-coenzyme a dehydrogenase, short/branched chain (ACADSB, Accession NP_001600.1) is another GAM281 target gene, herein designated TARGET GENE. ACADSB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACADSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACADSB BINDING SITE, designated SEQ ID:16689, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32628] Another function of GAM281 is therefore inhibition of Acyl-coenzyme a dehydrogenase, short/branched chain (ACADSB, Accession NP_001600.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with ACADSB.

[32629] A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 3 (ADAMTS3, Accession NP_055058.1) is another GAM281 target gene, herein designated TARGET GENE. ADAMTS3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ADAMTS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAMTS3 BINDING SITE, designated SEQ ID:16811, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32630] Another function of GAM281 is therefore inhibition of A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 3 (ADAMTS3, Accession NP_055058.1), a gene which cleaves the propeptides of type ii collagen prior to fibril assembly. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAMTS3.

[32631] The function of ADAMTS3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM216.1.A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Accession NP_005090.1) is another GAM281 target gene, herein designated TARGET GENE. ADAMTS4 BINDING SITE1 and ADAMTS4 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ADAMTS4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADAMTS4 BINDING SITE1 and ADAMTS4 BINDING SITE2, designated SEQ ID:13757 and SEQ ID:1651 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32632] Another function of GAM281 is therefore inhibition of A disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4, Accession NP_005090.1), a gene which cleaves aggrecan, a cartilage proteoglycan, and may be involved in its turnover. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADAMTS4.

[32633] The function of ADAMTS4 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Adenosine deaminase, rna-specific, b1 (red1 homolog rat) (ADARB1, Accession NP_056648.1) is another GAM281 target gene, herein designated TARGET GENE. ADARB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADARB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADARB1 BINDING SITE, designated SEQ ID:12610, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32634] Another function of GAM281 is therefore inhibition of Adenosine deaminase, rna-specific, b1 (red1 homolog rat) (ADARB1, Accession NP_056648.1), a gene which RNA editing involves the deamination of adenosines at specific sites. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADARB1.

[32635] The function of ADARB1 has been established by previous studies. RNA editing involves the deamination of

adenosines at specific sites, the result of which can be a change in the amino acid sequence of the protein so that it differs from that predicted by the sequence of the DNA. Editing of the glutamate receptor B (GluRB; 138247) pre-mRNA has been shown to alter a codon (referred to as the Q/R site) for a channel determinant that controls the calcium permeability of the AMPA glutamate receptors. Melcher et al. (1996) tested the candidate dsRNA adenosine deaminase DRADA (OMIM Ref. No. 601059) and showed that when coexpressed with a GluR- B minigene in HEK 293 cells, DRADA produced low- level editing at the GluR- B Q/R site. The authors then screened a rat brain cDNA library with the predicted catalytic domain of rat DRADA to identify other potential editing enzymes. A cDNA encoding a predicted 711- amino acid protein was isolated that gave about 90% of the expected activity in their editing assay. Melcher et al. (1996) designated this novel mammalian RNA editing protein RNA- editing enzyme- 1 (RED1). Rat RED1 and DRADA share about 31% overall identity primarily due to their conservation in the C- terminal catalytic domain. Northern blots showed highest expression of RED1 in rat brain. Melcher et al. (1996) further observed that while RED1 was more effi-

cient at deaminating some sites, DRADA had stronger activity at others. They speculated that a combination of these and perhaps other editing enzymes may be involved in determining the overall editing process for a given transcript. Higuchi et al. (2000) studied ADAR2- mediated RNA editing by generating mice that were homozygous for a targeted functional null allele. Editing in Adar2 - /- mice was substantially reduced at most of 25 positions in diverse transcripts; the mutant mice became prone to seizures and died young. The impaired phenotype appeared to result entirely from a single underedited position, since it reverted to normal when both alleles for the underedited transcript were substituted with alleles encoding the edited version exonically. The critical position specifies an ion channel determinant, the Q/R site, in AMPA receptor GluRB premessenger RNA. Higuchi et al. (2000) concluded that this transcript is physiologically the most important substrate of ADAR2.

[32636]

[32637] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32638] Melcher, T.; Maas, S.; Herb, A.; Sprengel, R.; Seeburg, P.

H.; Higuchi, M. : A mammalian RNA editing enzyme. Nature 379: 460- 463, 1996. ; and

[32639] Higuchi, M.; Maas, S.; Single, F. N.; Hartner, J.; Rozov, A.; Burnashev, N.; Feldmeyer, D.; Sprengel, R.; Seeburg, P. H. : Point mutation in an AMPA receptor gene rescues lethality in mi.

[32640] Further studies establishing the function and utilities of ADARB1 are found in John Hopkins OMIM database record ID 601218, and in cited publications listed in Table 5, which are hereby incorporated by reference.Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1) is another GAM281 target gene, herein designated TARGET GENE. ADCY1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADCY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY1 BINDING SITE, designated SEQ ID:6261, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32641] Another function of GAM281 is therefore inhibition of Adenylate cyclase 1 (brain) (ADCY1, Accession

NP_066939.1), a gene which a calmodulin- sensitive adenylyl cyclase. it may play a role in memory acquisition and learning. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY1.

[32642] The function of ADCY1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Adenylate cyclase 6 (ADCY6, Accession NP_056085.1) is another GAM281 target gene, herein designated TARGET GENE. ADCY6 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ADCY6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY6 BINDING SITE, designated SEQ ID:16688, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32643] Another function of GAM281 is therefore inhibition of Adenylate cyclase 6 (ADCY6, Accession NP_056085.1), a gene which this a membrane- bound, ca(2+)- inhibitable adenylyl cyclase (by similarity). Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY6.

[32644] The function of ADCY6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.2.Adenosine a2a receptor (ADORA2A, Accession NP_000666.2) is another GAM281 target gene, herein designated TARGET GENE. ADORA2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADORA2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADORA2A BINDING SITE, designated SEQ ID:19456, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32645] Another function of GAM281 is therefore inhibition of Adenosine a2a receptor (ADORA2A, Accession NP_000666.2), a gene which regulates phagocytosis, apoptosis and platelet aggregation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADORA2A.

[32646] The function of ADORA2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Agmatine ureohydrolase (agmatinase) (AGMAT, Accession NP_079034.2) is another GAM281 target gene, herein designated TARGET GENE. AGMAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AGMAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGMAT BINDING SITE, designated SEQ ID:9193, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32647] Another function of GAM281 is therefore inhibition of Agmatine ureohydrolase (agmatinase) (AGMAT, Accession NP_079034.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGMAT.

[32648] Angiotensin ii receptor-associated protein (AGTRAP, Accession NP_065083.2) is another GAM281 target gene, herein designated TARGET GENE. AGTRAP BINDING SITE is a target binding site found in the 3` untranslated region

of mRNA encoded by AGTRAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGTRAP BINDING SITE, designated SEQ ID:3359, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32649] Another function of GAM281 is therefore inhibition of Angiotensin ii receptor-associated protein (AGTRAP, Accession NP_065083.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGTRAP.

[32650] Aryl hydrocarbon receptor (AHR, Accession NP_001612.1) is another GAM281 target gene, herein designated TARGET GENE. AHR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AHR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AHR BINDING SITE, designated SEQ ID:8217, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32651] Another function of GAM281 is therefore inhibition of Aryl

hydrocarbon receptor (AHR, Accession NP_001612.1), a gene which plays a role in modulating carcinogenesis through the induction of xenobiotic- metabolizing enzymes and therefore may be associated with Stomach tumors. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Stomach tumors, and of other diseases and clinical conditions associated with AHR.

[32652] The function of AHR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Absent in melanoma 1 (AIM1, Accession XP_166300.1) is another GAM281 target gene, herein designated TARGET GENE. AIM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AIM1 BINDING SITE, designated SEQ ID:16864, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32653] Another function of GAM281 is therefore inhibition of Absent in melanoma 1 (AIM1, Accession XP_166300.1), a

gene which is altered in association with tumor suppression in a model of human melanoma and therefore may be associated with Malignant melanoma. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Malignant melanoma, and of other diseases and clinical conditions associated with AIM1.

[32654] The function of AIM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Aldehyde dehydrogenase 1 family, member b1 (ALDH1B1, Accession NP_000683.3) is another GAM281 target gene, herein designated TARGET GENE. ALDH1B1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALDH1B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALDH1B1 BINDING SITE, designated SEQ ID:2153, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32655] Another function of GAM281 is therefore inhibition of Aldehyde dehydrogenase 1 family, member b1 (ALDH1B1, Accession NP_000683.3) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH1B1.

[32656] Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1) is another GAM281 target gene, herein designated TARGET GENE. ALOX15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALOX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALOX15 BINDING SITE, designated SEQ ID:19939, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32657] Another function of GAM281 is therefore inhibition of Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1), a gene which converts arachidonic acid to 15s- hydroperoxyeicosatetraenoic acid. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALOX15.

[32658] The function of ALOX15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM189.1.AMID (Accession NP_116186.1) is another GAM281 target gene, herein designated TARGET GENE. AMID BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AMID, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMID BINDING SITE, designated SEQ ID:5895, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32659] Another function of GAM281 is therefore inhibition of AMID (Accession NP_116186.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMID.

[32660] Ankyrin repeat domain 6 (ANKRD6, Accession NP_055757.1) is another GAM281 target gene, herein designated TARGET GENE. ANKRD6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ANKRD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKRD6 BINDING SITE, designated SEQ ID:1746, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32661] Another function of GAM281 is therefore inhibition of Ankyrin repeat domain 6 (ANKRD6, Accession NP_055757.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKRD6.

[32662] Alanyl (membrane) aminopeptidase (aminopeptidase n, aminopeptidase m, microsomal aminopeptidase, cd13, p150) (ANPEP, Accession NP_001141.1) is another GAM281 target gene, herein designated TARGET GENE. ANPEP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ANPEP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANPEP BINDING SITE, designated SEQ ID:6737, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32663] Another function of GAM281 is therefore inhibition of Alanyl (membrane) aminopeptidase (aminopeptidase n, aminopeptidase m, microsomal aminopeptidase, cd13, p150) (ANPEP, Accession NP_001141.1), a gene which is a

cell- surface transmembrane glycosylated metalloprotease that processes signaling peptides. and therefore may be associated with Leukemia, lymphoma. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Leukemia, lymphoma, and of other diseases and clinical conditions associated with ANPEP.

[32664] The function of ANPEP has been established by previous studies. A surface antigen glycoprotein of molecular weight about 150,000 is recognized by monoclonal antibodies MY7 and MCS2. Look et al. (1986) isolated the complete ANPEP gene, which they called GP150, from a human placental genomic library. By study of somatic cell hybrid DNA and by in situ hybridization, the GP150 gene was assigned to 15q25- q26. This chromosomal location coincides with that of the oncogene FES (OMIM Ref. No. 190030), which is also expressed in myeloid cells. They are separate loci, however, because FES probes do not hybridize to cloned sequences spanning the GP150 gene and the 2 genes have different restriction maps. Like FES, GP150 is distal to the breakpoint in t(15;17)(q22;q21.1) of acute promyelocytic leukemia. By analysis of mouse- human somatic cell hybrids, Watt and Willard (1990) assigned the ANPEP gene, which they called PEPN, to 15q11-

qter. With a genomic DNA probe, they detected a frequent DraIII polymorphism useful as a marker for human chromosome 15. Look et al. (1989) determined the complete primary structure of GP150, known as CD13. The large extracellular carboxyterminal domain contained a pentapeptide consensus sequence characteristic of members of the zinc- binding metalloproteinase superfamily. Sequence comparisons with known enzymes of this class showed that CD13 and aminopeptidase N are identical. The latter enzyme was thought to be involved in the metabolism of regulatory peptides by diverse cell types, including small intestinal and renal tubular epithelial cells, macrophages, granulocytes, and synaptic membranes from the CNS.

[32665]

[32666] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32667] Look, A. T.; Ashmun, R. A.; Shapiro, L. H.; Peiper, S. C. : Human myeloid plasma membrane glycoprotein CD13 (gp150) is identical to aminopeptidase N. J. Clin. Invest. 83: 1299- 1307, 1989. ; and

[32668] Look, A. T.; Peiper, S. C.; Rebentisch, M. B.; Ashmun, R. A.;

Roussel, M. F.; Lemons, R. S.; Le Beau, M. M.; Rubin, C. M.; Sherr, C. J. : Molecular cloning, expression, and chromosomal.

[32669] Further studies establishing the function and utilities of ANPEP are found in John Hopkins OMIM database record ID 151530, and in cited publications listed in Table 5, which are hereby incorporated by reference.AP1S3 (Accession XP_291023.1) is another GAM281 target gene, herein designated TARGET GENE. AP1S3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AP1S3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1S3 BINDING SITE, designated SEQ ID:10109, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32670] Another function of GAM281 is therefore inhibition of AP1S3 (Accession XP_291023.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1S3.

[32671] Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) is another GAM281 tar-

get gene, herein designated TARGET GENE. AP3S2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AP3S2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP3S2 BINDING SITE, designated SEQ ID:19874, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32672] Another function of GAM281 is therefore inhibition of Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP3S2.

[32673] Apoptotic protease activating factor (APAF1, Accession NP_001151.1) is another GAM281 target gene, herein designated TARGET GENE. APAF1 BINDING SITE1 and APAF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by APAF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APAF1 BINDING SITE1 and APAF1

BINDING SITE2, designated SEQ ID:16578 and SEQ ID:19360 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32674] Another function of GAM281 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_001151.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[32675] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Apoptotic protease activating factor (APAF1, Accession NP_037361.1) is another GAM281 target gene, herein designated TARGET GENE. APAF1 BINDING SITE1 and APAF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by APAF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of APAF1 BINDING SITE1 and APAF1 BINDING SITE2, designated SEQ ID:16578 and SEQ ID:19360 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32676] Another function of GAM281 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_037361.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[32677] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.APG-1 (Accession NP_055093.2) is another GAM281 target gene, herein designated TARGET GENE. APG-1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by APG-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of APG-1 BINDING SITE, designated SEQ ID:17324, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32678] Another function of GAM281 is therefore inhibition of APG-1 (Accession NP_055093.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APG-1.

[32679] APM1 (Accession NP_004788.1) is another GAM281 target gene, herein designated TARGET GENE. APM1 BINDING SITE1 through APM1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by APM1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APM1 BINDING SITE1 through APM1 BINDING SITE3, designated SEQ ID:20035, SEQ ID:5598 and SEQ ID:11707 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32680] Another function of GAM281 is therefore inhibition of APM1 (Accession NP_004788.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APM1.

[32681] Apolipoprotein b mrna editing enzyme, catalytic polypeptide-like 3f (APOBEC3F, Accession NP_660341.2) is another GAM281 target gene, herein designated TARGET GENE. APOBEC3F BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APOBEC3F, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOBEC3F BINDING SITE, designated SEQ ID:5622, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32682] Another function of GAM281 is therefore inhibition of Apolipoprotein b mrna editing enzyme, catalytic polypeptide-like 3f (APOBEC3F, Accession NP_660341.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOBEC3F.

[32683] Apolipoprotein l, 2 (APOL2, Accession NP_663612.1) is another GAM281 target gene, herein designated TARGET GENE. APOL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APOL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL2 BINDING SITE, designated SEQ ID:8064, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32684] Another function of GAM281 is therefore inhibition of Apolipoprotein l, 2 (APOL2, Accession NP_663612.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOL2.

[32685] Apolipoprotein l, 2 (APOL2, Accession NP_112092.1) is another GAM281 target gene, herein designated TARGET GENE. APOL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APOL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL2 BINDING SITE, designated SEQ ID:8064, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32686] Another function of GAM281 is therefore inhibition of Apolipoprotein l, 2 (APOL2, Accession NP_112092.1) . Ac-

cordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOL2.

[32687] Amyloid beta precursor protein (cytoplasmic tail) binding protein 2 (APPBP2, Accession NP_006371.2) is another GAM281 target gene, herein designated TARGET GENE. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APPBP2 BINDING SITE, designated SEQ ID:4095, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32688] Another function of GAM281 is therefore inhibition of Amyloid beta precursor protein (cytoplasmic tail) binding protein 2 (APPBP2, Accession NP_006371.2), a gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore may be associated with Alzheimer's disease. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Alzheimer's disease, and of other diseases and clinical conditions associated with APPBP2.

[32689] The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.APPL (Accession NP_036228.1) is another GAM281 target gene, herein designated TARGET GENE. APPL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APPL BINDING SITE, designated SEQ ID:12068, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32690] Another function of GAM281 is therefore inhibition of APPL (Accession NP_036228.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APPL.

[32691] Aquaporin 2 (collecting duct) (AQP2, Accession NP_000477.1) is another GAM281 target gene, herein designated TARGET GENE. AQP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AQP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP2 BINDING SITE, designated SEQ ID:18318, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32692] Another function of GAM281 is therefore inhibition of Aquaporin 2 (collecting duct) (AQP2, Accession NP_000477.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP2.

[32693] Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1) is another GAM281 target gene, herein designated TARGET GENE. AQP6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AQP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP6 BINDING SITE, designated SEQ ID:3169, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32694] Another function of GAM281 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession

NP_445738.1), a gene which participates in distinct physiologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[32695] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Aquaporin 6, kidney specific (AQP6, Accession NP_001643.1) is another GAM281 target gene, herein designated TARGET GENE. AQP6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AQP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP6 BINDING SITE, designated SEQ ID:3169, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32696] Another function of GAM281 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession NP_001643.1), a gene which participates in distinct physi-

ologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[32697] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Archain 1 (ARCN1, Accession NP_001646.2) is another GAM281 target gene, herein designated TARGET GENE. ARCN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARCN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARCN1 BINDING SITE, designated SEQ ID:13747, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32698] Another function of GAM281 is therefore inhibition of Archain 1 (ARCN1, Accession NP_001646.2), a gene which plays a fundamental role in eukaryotic cell biology. Accordingly, utilities of GAM281 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with ARCN1.

[32699] The function of ARCN1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Adp-ribosylation factor related protein 1 (ARFRP1, Accession NP_003215.1) is another GAM281 target gene, herein designated TARGET GENE. ARFRP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARFRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARFRP1 BINDING SITE, designated SEQ ID:6901, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32700] Another function of GAM281 is therefore inhibition of Adp-ribosylation factor related protein 1 (ARFRP1, Accession NP_003215.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARFRP1.

[32701] Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) is another GAM281 target gene,

herein designated TARGET GENE. ARHF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHF BINDING SITE, designated SEQ ID:7962, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32702] Another function of GAM281 is therefore inhibition of Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHF.

[32703] Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) is another GAM281 target gene, herein designated TARGET GENE. ARHGAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP1 BINDING SITE, designated SEQ ID:4096, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32704] Another function of GAM281 is therefore inhibition of Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP1.

[32705] ARHGAP11A (Accession NP_055598.1) is another GAM281 target gene, herein designated TARGET GENE. ARHGAP11A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGAP11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP11A BINDING SITE, designated SEQ ID:17742, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32706] Another function of GAM281 is therefore inhibition of ARHGAP11A (Accession NP_055598.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP11A.

[32707] Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4, Accession NP_127462.1) is another GAM281 target gene, herein designated TARGET GENE. ARHGEF4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARHGEF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF4 BINDING SITE, designated SEQ ID:14328, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32708] Another function of GAM281 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4, Accession NP_127462.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF4.

[32709] Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4, Accession NP_056135.2) is another GAM281 target gene, herein designated TARGET GENE. ARHGEF4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ARHGEF4, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF4 BINDING SITE, designated SEQ ID:14328, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32710] Another function of GAM281 is therefore inhibition of Rho guanine nucleotide exchange factor (gef) 4 (ARHGEF4, Accession NP_056135.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF4.

[32711] ARPP-19 (Accession NP_006619.1) is another GAM281 target gene, herein designated TARGET GENE. ARPP-19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARPP-19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARPP-19 BINDING SITE, designated SEQ ID:944, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32712] Another function of GAM281 is therefore inhibition of ARPP-19 (Accession NP_006619.1) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARPP-19.

[32713] Arylsulfatase b (ARSB, Accession NP_000037.1) is another GAM281 target gene, herein designated TARGET GENE. ARSB BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ARSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARSB BINDING SITE, designated SEQ ID:13855, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32714] Another function of GAM281 is therefore inhibition of Arylsulfatase b (ARSB, Accession NP_000037.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARSB.

[32715] Ankyrin repeat and socs box-containing 16 (ASB16, Accession NP_543139.4) is another GAM281 target gene, herein designated TARGET GENE. ASB16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASB16, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB16 BINDING SITE, designated SEQ ID:14722, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32716] Another function of GAM281 is therefore inhibition of Ankyrin repeat and socs box-containing 16 (ASB16, Accession NP_543139.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB16.

[32717] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) is another GAM281 target gene, herein designated TARGET GENE. ASB6 BINDING SITE1 and ASB6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ASB6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE1 and ASB6 BINDING SITE2, designated SEQ ID:10305 and SEQ ID:2196 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32718] Another function of GAM281 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[32719] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) is another GAM281 target gene, herein designated TARGET GENE. ASB6 BINDING SITE1 and ASB6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ASB6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE1 and ASB6 BINDING SITE2, designated SEQ ID:10305 and SEQ ID:2196 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32720] Another function of GAM281 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[32721] ASE-1 (Accession NP_036231.1) is another GAM281 target

gene, herein designated TARGET GENE. ASE-1 BINDING SITE1 and ASE-1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ASE-1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASE-1 BINDING SITE1 and ASE-1 BINDING SITE2, designated SEQ ID:3101 and SEQ ID:1741 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32722] Another function of GAM281 is therefore inhibition of ASE-1 (Accession NP_036231.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASE-1.

[32723] ATF7IP2 (Accession NP_079273.1) is another GAM281 target gene, herein designated TARGET GENE. ATF7IP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATF7IP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATF7IP2 BINDING SITE, designated SEQ ID:9602, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[32724] Another function of GAM281 is therefore inhibition of ATF7IP2 (Accession NP_079273.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATF7IP2.

[32725] Ataxia telangiectasia mutated (includes complementation groups a, c and d) (ATM, Accession NP_000042.2) is another GAM281 target gene, herein designated TARGET GENE. ATM BINDING SITE1 and ATM BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by ATM, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATM BINDING SITE1 and ATM BINDING SITE2, designated SEQ ID:12000 and SEQ ID:1837 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32726] Another function of GAM281 is therefore inhibition of Ataxia telangiectasia mutated (includes complementation groups a, c and d) (ATM, Accession NP_000042.2) . Accordingly, utilities of GAM281 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with ATM.

[32727] Atpase, na+/k+ transporting, beta 2 polypeptide (ATP1B2, Accession NP_001669.1) is another GAM281 target gene, herein designated TARGET GENE. ATP1B2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP1B2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1B2 BINDING SITE, designated SEQ ID:16916, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32728] Another function of GAM281 is therefore inhibition of Atpase, na+/k+ transporting, beta 2 polypeptide (ATP1B2, Accession NP_001669.1), a gene which catalyzes the hydrolysis of ATP coupled with the exchange of Na +/K+ ions across the plasma membrane. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1B2.

[32729] The function of ATP1B2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM130.1.Atpase, (na+)/k+ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) is another GAM281 target gene, herein designated TARGET GENE. ATP1B4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP1B4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1B4 BINDING SITE, designated SEQ ID:13042, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32730] Another function of GAM281 is therefore inhibition of Atpase, (na+)/k+ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1B4.

[32731] Atpase, h+ transporting, lysosomal 38kda, v0 subunit d isoform 2 (ATP6V0D2, Accession NP_689778.1) is another GAM281 target gene, herein designated TARGET GENE. ATP6V0D2 BINDING SITE1 and ATP6V0D2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ATP6V0D2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP6V0D2 BINDING SITE1 and ATP6V0D2 BINDING SITE2, designated SEQ ID:17102 and SEQ ID:15039 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32732] Another function of GAM281 is therefore inhibition of Atpase, h+ transporting, lysosomal 38kda, v0 subunit d isoform 2 (ATP6V0D2, Accession NP_689778.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V0D2.

[32733] ATP6V1A (Accession NP_001681.2) is another GAM281 target gene, herein designated TARGET GENE. ATP6V1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP6V1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP6V1A BINDING SITE, designated SEQ ID:18868, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32734] Another function of GAM281 is therefore inhibition of

ATP6V1A (Accession NP_001681.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP6V1A.

[32735] Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) is another GAM281 target gene, herein designated TARGET GENE. ATP7A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP7A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP7A BINDING SITE, designated SEQ ID:4112, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32736] Another function of GAM281 is therefore inhibition of Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP7A.

[32737] Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) is another GAM281 target gene, herein

designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:11802, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32738] Another function of GAM281 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[32739] Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) is another GAM281 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:11802, to the nucleotide

sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32740] Another function of GAM281 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[32741] Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 4 (B4GALT4, Accession NP_003769.1) is another GAM281 target gene, herein designated TARGET GENE. B4GALT4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B4GALT4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT4 BINDING SITE, designated SEQ ID:11028, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32742] Another function of GAM281 is therefore inhibition of Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 4 (B4GALT4, Accession NP_003769.1) . Accordingly, utilities of GAM281 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with B4GALT4.

[32743] Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 5 (B4GALT5, Accession NP_004767.1) is another GAM281 target gene, herein designated TARGET GENE. B4GALT5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B4GALT5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT5 BINDING SITE, designated SEQ ID:16140, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32744] Another function of GAM281 is therefore inhibition of Udp-gal:betaglcnac beta 1,4- galactosyltransferase, polypeptide 5 (B4GALT5, Accession NP_004767.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT5.

[32745] Xylosylprotein beta 1,4-galactosyltransferase, polypeptide 7 (galactosyltransferase i) (B4GALT7, Accession NP_009186.1) is another GAM281 target gene, herein

designated TARGET GENE. B4GALT7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by B4GALT7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of B4GALT7 BINDING SITE, designated SEQ ID:18475, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32746] Another function of GAM281 is therefore inhibition of Xylosylprotein beta 1,4-galactosyltransferase, polypeptide 7 (galactosyltransferase i) (B4GALT7, Accession NP_009186.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with B4GALT7.

[32747] BA108L7.2 (Accession NP_112233.2) is another GAM281 target gene, herein designated TARGET GENE. BA108L7.2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BA108L7.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BA108L7.2 BINDING SITE, designated SEQ ID:10888, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32748] Another function of GAM281 is therefore inhibition of BA108L7.2 (Accession NP_112233.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BA108L7.2.

[32749] Beta-site app-cleaving enzyme (BACE, Accession NP_620429.1) is another GAM281 target gene, herein designated TARGET GENE. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BACE BINDING SITE, designated SEQ ID:16660, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32750] Another function of GAM281 is therefore inhibition of Beta-site app-cleaving enzyme (BACE, Accession NP_620429.1), a gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore may be associated with Alzheimer disease. Ac-

cordingly, utilities of GAM281 include diagnosis, prevention and treatment of Alzheimer disease, and of other diseases and clinical conditions associated with BACE.

[32751] The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Beta-site app-cleaving enzyme (BACE, Accession NP_036236.1) is another GAM281 target gene, herein designated TARGET GENE. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BACE BINDING SITE, designated SEQ ID:16660, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32752] Another function of GAM281 is therefore inhibition of Beta-site app-cleaving enzyme (BACE, Accession NP_036236.1), a gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore may be associated with Alzheimer disease. Accordingly, utilities of GAM281 include diagnosis, preven-

tion and treatment of Alzheimer disease, and of other diseases and clinical conditions associated with BACE.

[32753] The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Beta-site app-cleaving enzyme (BACE, Accession NP_620427.1) is another GAM281 target gene, herein designated TARGET GENE. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BACE BINDING SITE, designated SEQ ID:16660, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32754] Another function of GAM281 is therefore inhibition of Beta-site app-cleaving enzyme (BACE, Accession NP_620427.1), a gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore may be associated with Alzheimer disease. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Alzheimer disease, and of other dis-

eases and clinical conditions associated with BACE.

[32755] The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Beta-site app-cleaving enzyme (BACE, Accession NP_620428.1) is another GAM281 target gene, herein designated TARGET GENE. BACE BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by BACE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BACE BINDING SITE, designated SEQ ID:16660, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32756] Another function of GAM281 is therefore inhibition of Beta-site app-cleaving enzyme (BACE, Accession NP_620428.1), a gene which is responsible for the proteolytic processing of the amyloid precursor protein and therefore may be associated with Alzheimer disease. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Alzheimer disease, and of other diseases and clinical conditions associated with BACE.

[32757] The function of BACE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Btb and cnc homology 1, basic leucine zipper transcription factor 2 (BACH2, Accession NP_068585.1) is another GAM281 target gene, herein designated TARGET GENE. BACH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BACH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BACH2 BINDING SITE, designated SEQ ID:2573, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32758] Another function of GAM281 is therefore inhibition of Btb and cnc homology 1, basic leucine zipper transcription factor 2 (BACH2, Accession NP_068585.1), a gene which acts as repressor or activator, binds to maf recognition elements and therefore may be associated with Non-hodgkin lymphoma. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Non-hodgkin lymphoma, and of other diseases and clinical conditions associated with BACH2.

[32759] The function of BACH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Bcl2-associated athanogene 5 (BAG5, Accession NP_004864.1) is another GAM281 target gene, herein designated TARGET GENE. BAG5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BAG5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAG5 BINDING SITE, designated SEQ ID:5695, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32760] Another function of GAM281 is therefore inhibition of Bcl2-associated athanogene 5 (BAG5, Accession NP_004864.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAG5.

[32761] Bromodomain adjacent to zinc finger domain, 2a (BAZ2A, Accession NP_038477.1) is another GAM281 target gene, herein designated TARGET GENE. BAZ2A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BAZ2A, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAZ2A BINDING SITE, designated SEQ ID:8852, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32762] Another function of GAM281 is therefore inhibition of Bromodomain adjacent to zinc finger domain, 2a (BAZ2A, Accession NP_038477.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAZ2A.

[32763] Butyrylcholinesterase (BCHE, Accession NP_000046.1) is another GAM281 target gene, herein designated TARGET GENE. BCHE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BCHE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCHE BINDING SITE, designated SEQ ID:7089, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32764] Another function of GAM281 is therefore inhibition of Butyrylcholinesterase (BCHE, Accession NP_000046.1) . Ac-

cordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BCHE.

[32765] B-cell cll/lymphoma 10 (BCL10, Accession NP_003912.1) is another GAM281 target gene, herein designated TARGET GENE. BCL10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCL10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCL10 BINDING SITE, designated SEQ ID:19576, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32766] Another function of GAM281 is therefore inhibition of B-cell cll/lymphoma 10 (BCL10, Accession NP_003912.1), a gene which is a positive regulator of lymphocyte proliferation, NF- kappaB activator. and therefore may be associated with Malt lymphoma, follicular lymphoma. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Malt lymphoma, follicular lymphoma, and of other diseases and clinical conditions associated with BCL10.

[32767] The function of BCL10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Bradykinin receptor b1 (BDKRB1, Accession NP_000701.2) is another GAM281 target gene, herein designated TARGET GENE. BDKRB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BDKRB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BDKRB1 BINDING SITE, designated SEQ ID:8663, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32768] Another function of GAM281 is therefore inhibition of Bradykinin receptor b1 (BDKRB1, Accession NP_000701.2), a gene which mediates intracellular calcium flux. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BDKRB1.

[32769] The function of BDKRB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM136.1.Bradykinin receptor b2 (BDKRB2, Accession NP_000614.1) is another GAM281 target gene, herein designated TARGET GENE. BDKRB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BDKRB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BDKRB2 BINDING SITE, designated SEQ ID:15590, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32770] Another function of GAM281 is therefore inhibition of Bradykinin receptor b2 (BDKRB2, Accession NP_000614.1), a gene which involves in inflammation, vasodilation, smooth muscle contraction, relaxation, and response to pain and therefore may be associated with Cardiovascular diseases. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Cardiovascular diseases, and of other diseases and clinical conditions associated with BDKRB2.

[32771] The function of BDKRB2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM94.1.B double prime 1, subunit of rna polymerase iii transcription initiation factor iiib (BDP1, Accession NP_060899.1) is another GAM281 target gene, herein designated TARGET GENE. BDP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BDP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BDP1 BINDING SITE, designated SEQ ID:19556, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32772] Another function of GAM281 is therefore inhibition of B double prime 1, subunit of rna polymerase iii transcription initiation factor iiib (BDP1, Accession NP_060899.1), a gene which activates RNA polymerase III transcription. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BDP1.

[32773] The function of BDP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.BENE (Accession NP_005425.1) is another

GAM281 target gene, herein designated TARGET GENE. BENE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BENE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BENE BINDING SITE, designated SEQ ID:6009, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32774] Another function of GAM281 is therefore inhibition of BENE (Accession NP_005425.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BENE.

[32775] BHD (Accession NP_659434.2) is another GAM281 target gene, herein designated TARGET GENE. BHD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BHD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BHD BINDING SITE, designated SEQ ID:9036, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32776] Another function of GAM281 is therefore inhibition of BHD (Accession NP_659434.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BHD.

[32777] BIA2 (Accession NP_056246.1) is another GAM281 target gene, herein designated TARGET GENE. BIA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BIA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BIA2 BINDING SITE, designated SEQ ID:6389, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32778] Another function of GAM281 is therefore inhibition of BIA2 (Accession NP_056246.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BIA2.

[32779] Bh3 interacting domain death agonist (BID, Accession NP_001187.1) is another GAM281 target gene, herein designated TARGET GENE. BID BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BID, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BID BINDING SITE, designated SEQ ID:10620, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32780] Another function of GAM281 is therefore inhibition of Bh3 interacting domain death agonist (BID, Accession NP_001187.1), a gene which induces ice- like proteases and apoptosis and therefore may be associated with Cat eye syndrome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Cat eye syndrome, and of other diseases and clinical conditions associated with BID.

[32781] The function of BID has been established by previous studies. Wang et al. (1996) identified a gene they termed BID (BH3 Interacting domain Death agonist) that encodes a novel death agonist that heterodimerizes with either agonists (BAX) or antagonists (BCL2). BID possesses only the BH3 domain, lacks a C- terminal signal- anchor segment, and is found in both cytosolic and membrane locations. BID's only homology with the BCL2 family is the conserved BH3 domain. BID counters the protective effect of BCL2.

Expression of BID induces ICE- like proteases which are thought to be downstream of BCL2, activated in apoptosis, and required for aspects of cell death. Wang et al. (1996) stated that the discovery of this BH3- only molecule supports the identification of BH3 as a death domain and favors a model in which BID represents a death ligand for the membrane- bound receptor BAX. Luo et al. (1998) reported the purification of a cytosolic protein that induces cytochrome c release from mitochondria in response to caspase- 8 (CASP8; 601763), the apical caspase activated by cell surface death receptors such as FAS (OMIM Ref. No. 134637) and TNF (OMIM Ref. No. 191160). Peptide mass fingerprinting identified this protein as BID. CASP8 cleaves BID, and the COOH- terminal part translocates to mitochondria where it triggers cytochrome c release. Immunodepletion of BID from cell extracts eliminated the cytochrome c releasing activity. The cytochrome c releasing activity of BID was antagonized by BCL2 (OMIM Ref. No. 151430). A mutation at the BH3 domain diminished its cytochrome c releasing activity. BID, therefore, relays an apoptotic signal from the cell surface to mitochondria. Li et al. (1998) reported that BID is a specific proximal substrate of CASP8 in the Fas apoptotic signal-

ing pathway. While full- length BID is localized in cytosol, truncated BID translocates to mitochondria and thus transduces apoptotic signals from cytoplasmic membrane to mitochondria. Truncated BID induces first the clustering of mitochondria around the nuclei and release of cytochrome c independent of caspase activity, and then the loss of mitochondrial membrane potential, cell shrinkage, and nuclear condensation in a caspase- dependent fashion. The results of Li et al. (1998) indicated that BID is a mediator of mitochondrial damage induced by CASP8.

[32782] Animal model experiments lend further support to the function of BID. Yin et al. (1999) generated mice deficient in Bid by homologous recombination. Bid - /- mice were born at the expected frequency and had no developmental abnormalities. When Bid - /- mice were injected with an antibody against Fas, nearly all survived, whereas wildtype mice died from hepatocellular apoptosis and hemorrhagic necrosis. About half of the Bid - /- mice had no apparent liver injury and showed no evidence of activation of the effector caspases 3 (OMIM Ref. No. 600636) and 7 (OMIM Ref. No. 601761), although the initiator caspase- 8 had been activated. Other Bid- deficient mice survived with only moderate damage: all 3 caspases (3, 7, and 8) were

activated, but their cell nuclei were intact, and no mitochondrial cytochrome c was released. Yin et al. (1999) also investigated the effects of Bid deficiency in cultured cells treated with anti- Fas antibody or with TNF- alpha. In these Bid - /- cells, mitochondrial dysfunction was delayed, cytochrome c was not released, effector caspase activity was reduced, and the cleavage of apoptosis substrates was altered. This loss- of- function model indicates that Bid is a critical substrate in vivo for signaling by death- receptor agonists that mediates a mitochondrial amplification loop that is essential for the apoptosis of selected cells.

[32783] It is appreciated that the abovementioned animal model for BID is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[32784] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32785] Li, H.; Zhu, H.; Xu, C.; Yuan, J. : Cleavage of BID by caspase 8 mediates the mitochondrial damage in the Fas pathway of apoptosis. Cell 94: 491- 501, 1998. ; and

[32786] Yin, X.- M.; Wang, K.; Gross, A.; Zhao, Y.; Zinkel, S.;

Klocke, B.; Roth, K. A.; Korsmeyer, S. J. : Bid- deficient mice are resistant to Fas- induced hepatocellular apoptosis. Nature 400:.

[32787] Further studies establishing the function and utilities of BID are found in John Hopkins OMIM database record ID 601997, and in cited publications listed in Table 5, which are hereby incorporated by reference.BMF (Accession NP_277038.1) is another GAM281 target gene, herein designated TARGET GENE. BMF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BMF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BMF BINDING SITE, designated SEQ ID:759, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32788] Another function of GAM281 is therefore inhibition of BMF (Accession NP_277038.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMF.

[32789] Bone morphogenetic protein 6 (BMP6, Accession NP_001709.1) is another GAM281 target gene, herein designated TARGET GENE. BMP6 BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by BMP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BMP6 BINDING SITE, designated SEQ ID:6882, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32790] Another function of GAM281 is therefore inhibition of Bone morphogenetic protein 6 (BMP6, Accession NP_001709.1), a gene which induces cartilage and bone formation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BMP6.

[32791] The function of BMP6 has been established by previous studies. See BMP5 (OMIM Ref. No. 112265). Hahn et al. (1992) mapped both BMP5 and BMP6 to human chromosome 6 by study of human/rodent somatic cell hybrid lines with cDNA probes. Olavesen et al. (1997) reported fine mapping of 39 ESTs on 6p25- p23. Most of the ESTs (31 of 39) were positioned in the 6p24- p23 interval; of these, 8 were located within a single PAC clone. BMP6 was 1 of the 8 loci on the PAC, between TFAP2 (OMIM Ref. No. 107580) at the centromeric side and DSP (OMIM Ref. No.

125647) on the telomeric side. Rickard et al. (1998) presented evidence that the skeletal effects of estrogen on bone and cartilage may be mediated by increased production of BMP6 by osteoblasts. They investigated the effect of estrogen on BMP production in 2 estrogen- responsive, human immortalized cell lines that display the mature osteoblast phenotype.

[32792]

[32793] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[32794] Hahn, G. V.; Cohen, R. B.; Wozney, J. M.; Levitz, C. L.; Shore, E. M.; Zasloff, M. A.; Kaplan, F. S. : A bone morphogenetic protein subfamily: chromosomal localization of human genes for BMP5, BMP6, and BMP7. Genomics 14: 759- 762, 1992. ; and

[32796] Further studies establishing the function and utilities of BMP6 are found in John Hopkins OMIM database record ID 112266, and in cited publications listed in Table 5, which

are hereby incorporated by reference.BNIP-S (Accession NP_612122.1) is another GAM281 target gene, herein designated TARGET GENE. BNIP-S BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BNIP-S, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BNIP-S BINDING SITE, designated SEQ ID:5845, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32797] Another function of GAM281 is therefore inhibition of BNIP-S (Accession NP_612122.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BNIP-S.

[32798] BRIP1 (Accession NP_114432.1) is another GAM281 target gene, herein designated TARGET GENE. BRIP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BRIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRIP1 BINDING SITE, designated SEQ ID:13904, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32799] Another function of GAM281 is therefore inhibition of BRIP1 (Accession NP_114432.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRIP1.

[32800] Bromodomain and phd finger containing, 3 (BRPF3, Accession XP_166450.1) is another GAM281 target gene, herein designated TARGET GENE. BRPF3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BRPF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRPF3 BINDING SITE, designated SEQ ID:7755, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32801] Another function of GAM281 is therefore inhibition of Bromodomain and phd finger containing, 3 (BRPF3, Accession XP_166450.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRPF3.

[32802] Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession

NP_008979.2) is another GAM281 target gene, herein designated TARGET GENE. BTN3A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTN3A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN3A1 BINDING SITE, designated SEQ ID:2067, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32803] Another function of GAM281 is therefore inhibition of Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession NP_008979.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN3A1.

[32804] BXDC1 (Accession XP_166303.1) is another GAM281 target gene, herein designated TARGET GENE. BXDC1 BINDING SITE1 and BXDC1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BXDC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BXDC1 BINDING SITE1 and BXDC1

BINDING SITE2, designated SEQ ID:4549 and SEQ ID:12129 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32805] Another function of GAM281 is therefore inhibition of BXDC1 (Accession XP_166303.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BXDC1.

[32806] BY55 (Accession NP_008984.1) is another GAM281 target gene, herein designated TARGET GENE. BY55 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BY55, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BY55 BINDING SITE, designated SEQ ID:7101, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32807] Another function of GAM281 is therefore inhibition of BY55 (Accession NP_008984.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BY55.

[32808] Chromosome 11 open reading frame 13 (C11orf13, Accession NP_003466.1) is another GAM281 target gene,

herein designated TARGET GENE. C11orf13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C11orf13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C11orf13 BINDING SITE, designated SEQ ID:3521, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32809] Another function of GAM281 is therefore inhibition of Chromosome 11 open reading frame 13 (C11orf13, Accession NP_003466.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C11orf13.

[32810] Chromosome 11 open reading frame 17 (C11orf17, Accession NP_065693.2) is another GAM281 target gene, herein designated TARGET GENE. C11orf17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C11orf17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C11orf17 BINDING SITE, designated SEQ ID:11525, to the nucleotide

sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32811] Another function of GAM281 is therefore inhibition of Chromosome 11 open reading frame 17 (C11orf17, Accession NP_065693.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C11orf17.

[32812] Chromosome 13 open reading frame 1 (C13orf1, Accession NP_065189.1) is another GAM281 target gene, herein designated TARGET GENE. C13orf1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C13orf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C13orf1 BINDING SITE, designated SEQ ID:5746, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32813] Another function of GAM281 is therefore inhibition of Chromosome 13 open reading frame 1 (C13orf1, Accession NP_065189.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C13orf1.

[32814] Chromosome 14 open reading frame 1 (C14orf1, Accession NP_009107.1) is another GAM281 target gene, herein designated TARGET GENE. C14orf1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf1 BINDING SITE, designated SEQ ID:12744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32815] Another function of GAM281 is therefore inhibition of Chromosome 14 open reading frame 1 (C14orf1, Accession NP_009107.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf1.

[32816] C14orf113 (Accession NP_060100.1) is another GAM281 target gene, herein designated TARGET GENE. C14orf113 BINDING SITE1 and C14orf113 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C14orf113, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of C14orf113 BINDING SITE1 and C14orf113 BINDING SITE2, designated SEQ ID:18863 and SEQ ID:5052 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32817] Another function of GAM281 is therefore inhibition of C14orf113 (Accession NP_060100.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf113.

[32818] C14orf115 (Accession NP_060698.1) is another GAM281 target gene, herein designated TARGET GENE. C14orf115 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C14orf115, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf115 BINDING SITE, designated SEQ ID:1480, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32819] Another function of GAM281 is therefore inhibition of C14orf115 (Accession NP_060698.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with C14orf115.

[32820] C14orf143 (Accession NP_660274.1) is another GAM281 target gene, herein designated TARGET GENE. C14orf143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf143 BINDING SITE, designated SEQ ID:17955, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32821] Another function of GAM281 is therefore inhibition of C14orf143 (Accession NP_660274.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf143.

[32822] C14orf92 (Accession NP_055643.1) is another GAM281 target gene, herein designated TARGET GENE. C14orf92 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf92, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of C14orf92 BINDING SITE, designated SEQ ID:14861, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32823] Another function of GAM281 is therefore inhibition of C14orf92 (Accession NP_055643.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf92.

[32824] Chromosome 16 open reading frame 7 (C16orf7, Accession NP_004904.1) is another GAM281 target gene, herein designated TARGET GENE. C16orf7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C16orf7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C16orf7 BINDING SITE, designated SEQ ID:16110, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32825] Another function of GAM281 is therefore inhibition of Chromosome 16 open reading frame 7 (C16orf7, Accession NP_004904.1) . Accordingly, utilities of GAM281 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with C16orf7.

[32826] Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) is another GAM281 target gene, herein designated TARGET GENE. C1orf24 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C1orf24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:19538, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32827] Another function of GAM281 is therefore inhibition of Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24.

[32828] C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) is another GAM281 target gene, herein designated TARGET GENE. C1QTNF6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1QTNF6, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1QTNF6 BINDING SITE, designated SEQ ID:14882, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32829] Another function of GAM281 is therefore inhibition of C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QTNF6.

[32830] Chromosome 20 open reading frame 147 (C20orf147, Accession NP_689880.1) is another GAM281 target gene, herein designated TARGET GENE. C20orf147 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf147, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf147 BINDING SITE, designated SEQ ID:16257, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32831] Another function of GAM281 is therefore inhibition of

Chromosome 20 open reading frame 147 (C20orf147, Accession NP_689880.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf147.

[32832] Chromosome 21 open reading frame 67 (C21orf67, Accession NP_478068.1) is another GAM281 target gene, herein designated TARGET GENE. C21orf67 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C21orf67, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf67 BINDING SITE, designated SEQ ID:6569, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32833] Another function of GAM281 is therefore inhibition of Chromosome 21 open reading frame 67 (C21orf67, Accession NP_478068.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf67.

[32834] Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) is another GAM281 target gene, herein designated TARGET GENE. C22orf19 BINDING SITE

is a target binding site found in the 3` untranslated region of mRNA encoded by C22orf19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C22orf19 BINDING SITE, designated SEQ ID:18897, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32835] Another function of GAM281 is therefore inhibition of Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C22orf19.

[32836] C3IP1 (Accession NP_067646.1) is another GAM281 target gene, herein designated TARGET GENE. C3IP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C3IP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C3IP1 BINDING SITE, designated SEQ ID:2482, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32837] Another function of GAM281 is therefore inhibition of C3IP1 (Accession NP_067646.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C3IP1.

[32838] C4orf9 (Accession XP_035572.1) is another GAM281 target gene, herein designated TARGET GENE. C4orf9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C4orf9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C4orf9 BINDING SITE, designated SEQ ID:15574, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32839] Another function of GAM281 is therefore inhibition of C4orf9 (Accession XP_035572.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C4orf9.

[32840] Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) is another GAM281 target gene, herein designated TARGET GENE. C6orf33 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf33, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf33 BINDING SITE, designated SEQ ID:6896, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32841] Another function of GAM281 is therefore inhibition of Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf33.

[32842] C6orf5 (Accession NP_056339.2) is another GAM281 target gene, herein designated TARGET GENE. C6orf5 BINDING SITE1 and C6orf5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C6orf5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf5 BINDING SITE1 and C6orf5 BINDING SITE2, designated SEQ ID:12805 and SEQ ID:10099 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32843] Another function of GAM281 is therefore inhibition of C6orf5 (Accession NP_056339.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf5.

[32844] C6orf57 (Accession NP_660310.1) is another GAM281 target gene, herein designated TARGET GENE. C6orf57 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf57, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf57 BINDING SITE, designated SEQ ID:2114, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32845] Another function of GAM281 is therefore inhibition of C6orf57 (Accession NP_660310.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf57.

[32846] Complement component 7 (C7, Accession NP_000578.1) is another GAM281 target gene, herein designated TARGET GENE. C7 BINDING SITE1 and C7 BINDING SITE2 are target binding sites found in untranslated regions of

mRNA encoded by C7, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C7 BINDING SITE1 and C7 BINDING SITE2, designated SEQ ID:17778 and SEQ ID:9684 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32847] Another function of GAM281 is therefore inhibition of Complement component 7 (C7, Accession NP_000578.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C7.

[32848] Chromosome 9 open reading frame 5 (C9orf5, Accession NP_114401.1) is another GAM281 target gene, herein designated TARGET GENE. C9orf5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C9orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf5 BINDING SITE, designated SEQ ID:14258, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32849] Another function of GAM281 is therefore inhibition of Chromosome 9 open reading frame 5 (C9orf5, Accession NP_114401.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf5.

[32850] Chromosome 9 open reading frame 9 (C9orf9, Accession NP_061829.2) is another GAM281 target gene, herein designated TARGET GENE. C9orf9 BINDING SITE1 and C9orf9 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C9orf9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf9 BINDING SITE1 and C9orf9 BINDING SITE2, designated SEQ ID:5477 and SEQ ID:11520 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32851] Another function of GAM281 is therefore inhibition of Chromosome 9 open reading frame 9 (C9orf9, Accession NP_061829.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf9.

[32852] CAB2 (Accession NP_219487.2) is another GAM281 target

gene, herein designated TARGET GENE. CAB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAB2 BINDING SITE, designated SEQ ID:9181, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32853] Another function of GAM281 is therefore inhibition of CAB2 (Accession NP_219487.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAB2.

[32854] Calcium binding protein 4 (CABP4, Accession NP_660201.1) is another GAM281 target gene, herein designated TARGET GENE. CABP4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CABP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABP4 BINDING SITE, designated SEQ ID:7624, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32855] Another function of GAM281 is therefore inhibition of Calcium binding protein 4 (CABP4, Accession NP_660201.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CABP4.

[32856] Calcium modulating ligand (CAMLG, Accession NP_001736.1) is another GAM281 target gene, herein designated TARGET GENE. CAMLG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAMLG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMLG BINDING SITE, designated SEQ ID:18944, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32857] Another function of GAM281 is therefore inhibition of Calcium modulating ligand (CAMLG, Accession NP_001736.1), a gene which is likely involved in the mobilization of calcium as a result of the tcr/cd3 complex interaction. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMLG.

[32858] The function of CAMLG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.CAPRI (Accession NP_008920.3) is another GAM281 target gene, herein designated TARGET GENE. CAPRI BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAPRI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAPRI BINDING SITE, designated SEQ ID:4271, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32859] Another function of GAM281 is therefore inhibition of CAPRI (Accession NP_008920.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPRI.

[32860] Caspase recruitment domain family, member 6 (CARD6, Accession NP_115976.2) is another GAM281 target gene, herein designated TARGET GENE. CARD6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CARD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD6 BINDING SITE, designated SEQ ID:9036, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32861] Another function of GAM281 is therefore inhibition of Caspase recruitment domain family, member 6 (CARD6, Accession NP_115976.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARD6.

[32862] Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116766.1) is another GAM281 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:16398, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32863] Another function of GAM281 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116766.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[32864] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116765.1) is another GAM281 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:16398, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[32865] Another function of GAM281 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116765.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[32866] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_001215.1) is another GAM281 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:16398, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32867] Another function of GAM281 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_001215.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[32868] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116764.1) is another GAM281 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE,

designated SEQ ID:16398, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32869] Another function of GAM281 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116764.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[32870] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203520.1) is another GAM281 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated

SEQ ID:15049, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32871] Another function of GAM281 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203520.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[32872] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1) is another GAM281 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:15049, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32873] Another function of GAM281 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[32874] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_001219.2) is another GAM281 target gene, herein designated TARGET GENE.

CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:15049, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32875] Another function of GAM281 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_001219.2), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[32876] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM72.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203519.1) is another GAM281 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:15049, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32877] Another function of GAM281 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203519.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[32878] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_787060.1) is another GAM281 target gene, herein designated TARGET GENE. CBFA2T2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CBFA2T2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CBFA2T2 BINDING SITE, designated SEQ ID:8242, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32879] Another function of GAM281 is therefore inhibition of Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_787060.1), a gene which is a putative transcription factor. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBFA2T2.

[32880] The function of CBFA2T2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Chemokine (c-c motif) ligand 16 (CCL16, Accession NP_004581.1) is another GAM281 target gene, herein designated TARGET GENE. CCL16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL16 BINDING SITE, designated SEQ ID:9543, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32881] Another function of GAM281 is therefore inhibition of Chemokine (c-c motif) ligand 16 (CCL16, Accession NP_004581.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL16.

[32882] Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) is another GAM281 target gene, herein designated TARGET GENE. CCL22 BINDING SITE1 and CCL22 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CCL22, corre-

sponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL22 BINDING SITE1 and CCL22 BINDING SITE2, designated SEQ ID:15049 and SEQ ID:1679 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32883] Another function of GAM281 is therefore inhibition of Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL22.

[32884] Cyclin f (CCNF, Accession NP_001752.1) is another GAM281 target gene, herein designated TARGET GENE. CCNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNF BINDING SITE, designated SEQ ID:17624, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32885] Another function of GAM281 is therefore inhibition of Cy-

clin f (CCNF, Accession NP_001752.1), a gene which likely to be involved in the control of the cell cycle during s phase and g2. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNF.

[32886] The function of CCNF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Ccr4 carbon catabolite repression 4-like (s. cerevisiae) (CCRN4L, Accession NP_036250.2) is another GAM281 target gene, herein designated TARGET GENE. CCRN4L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCRN4L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCRN4L BINDING SITE, designated SEQ ID:4698, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32887] Another function of GAM281 is therefore inhibition of Ccr4 carbon catabolite repression 4-like (s. cerevisiae) (CCRN4L, Accession NP_036250.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with CCRN4L.

[32888] Cd209 antigen (CD209, Accession NP_066978.1) is another GAM281 target gene, herein designated TARGET GENE. CD209 BINDING SITE1 and CD209 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CD209, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD209 BINDING SITE1 and CD209 BINDING SITE2, designated SEQ ID:4298 and SEQ ID:17051 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32889] Another function of GAM281 is therefore inhibition of Cd209 antigen (CD209, Accession NP_066978.1), a gene which may play an important role in the CD4- independent association of HIV with cells. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD209.

[32890] The function of CD209 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM96.1.Cd24 antigen (small cell lung carcinoma cluster 4 antigen) (CD24, Accession NP_037362.1) is another GAM281 target gene, herein designated TARGET GENE. CD24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD24 BINDING SITE, designated SEQ ID:19572, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32891] Another function of GAM281 is therefore inhibition of Cd24 antigen (small cell lung carcinoma cluster 4 antigen) (CD24, Accession NP_037362.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD24.

[32892] Cdc14 cell division cycle 14 homolog b (s. cerevisiae) (CDC14B, Accession NP_201589.1) is another GAM281 target gene, herein designated TARGET GENE. CDC14B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDC14B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC14B BINDING SITE, designated SEQ ID:17127, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32893] Another function of GAM281 is therefore inhibition of Cdc14 cell division cycle 14 homolog b (s. cerevisiae) (CDC14B, Accession NP_201589.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC14B.

[32894] Cell division cycle 2-like 2 (CDC2L2, Accession NP_296370.1) is another GAM281 target gene, herein designated TARGET GENE. CDC2L2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CDC2L2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC2L2 BINDING SITE, designated SEQ ID:15084, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32895] Another function of GAM281 is therefore inhibition of Cell

division cycle 2-like 2 (CDC2L2, Accession NP_296370.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC2L2.

[32896] Cdc6 cell division cycle 6 homolog (s. cerevisiae) (CDC6, Accession NP_001245.1) is another GAM281 target gene, herein designated TARGET GENE. CDC6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDC6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC6 BINDING SITE, designated SEQ ID:9211, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32897] Another function of GAM281 is therefore inhibition of Cdc6 cell division cycle 6 homolog (s. cerevisiae) (CDC6, Accession NP_001245.1), a gene which is a component of the origin recognition complex (orc) that binds origins of replication. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC6.

[32898] The function of CDC6 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.CDCP1 (Accession NP_073753.3) is another GAM281 target gene, herein designated TARGET GENE. CDCP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDCP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDCP1 BINDING SITE, designated SEQ ID:12091, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32899] Another function of GAM281 is therefore inhibition of CDCP1 (Accession NP_073753.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDCP1.

[32900] Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) is another GAM281 target gene, herein designated TARGET GENE. CDH1 BINDING SITE1 and CDH1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CDH1, corresponding to target binding sites such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH1 BINDING SITE1 and CDH1 BINDING SITE2, designated SEQ ID:12580 and SEQ ID:5514 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32901] Another function of GAM281 is therefore inhibition of Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH1.

[32902] Cadherin 17, li cadherin (liver-intestine) (CDH17, Accession NP_004054.2) is another GAM281 target gene, herein designated TARGET GENE. CDH17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDH17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH17 BINDING SITE, designated SEQ ID:13851, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32903] Another function of GAM281 is therefore inhibition of

Cadherin 17, li cadherin (liver-intestine) (CDH17, Accession NP_004054.2), a gene which may have a role in the morphological organization of liver and intestine and involved in intestinal peptide transport. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH17.

[32904] The function of CDH17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.CDK11 (Accession XP_166324.1) is another GAM281 target gene, herein designated TARGET GENE. CDK11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDK11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDK11 BINDING SITE, designated SEQ ID:8162, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32905] Another function of GAM281 is therefore inhibition of CDK11 (Accession XP_166324.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDK11.

[32906] CDKAL1 (Accession NP_060244.1) is another GAM281 target gene, herein designated TARGET GENE. CDKAL1 BINDING SITE1 and CDKAL1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CDKAL1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDKAL1 BINDING SITE1 and CDKAL1 BINDING SITE2, designated SEQ ID:1255 and SEQ ID:3603 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32907] Another function of GAM281 is therefore inhibition of CDKAL1 (Accession NP_060244.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKAL1.

[32908] CDT6 (Accession NP_066969.1) is another GAM281 target gene, herein designated TARGET GENE. CDT6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDT6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDT6 BINDING SITE, designated SEQ ID:18500, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32909] Another function of GAM281 is therefore inhibition of CDT6 (Accession NP_066969.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDT6.

[32910] Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) is another GAM281 target gene, herein designated TARGET GENE. CEACAM8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CEACAM8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CEACAM8 BINDING SITE, designated SEQ ID:17969, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32911] Another function of GAM281 is therefore inhibition of Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CEACAM8.

[32912] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) is another GAM281 target gene, herein designated TARGET GENE. CECR1 BINDING SITE1 and CECR1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CECR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE1 and CECR1 BINDING SITE2, designated SEQ ID:9037 and SEQ ID:4574 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32913] Another function of GAM281 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[32914] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) is another GAM281 target gene, herein designated TARGET GENE. CECR1 BINDING SITE1 and CECR1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts

of mRNA encoded by CECR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE1 and CECR1 BINDING SITE2, designated SEQ ID:4574 and SEQ ID:9037 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32915] Another function of GAM281 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[32916] Centromere protein h (CENPH, Accession NP_075060.1) is another GAM281 target gene, herein designated TARGET GENE. CENPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CENPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENPH BINDING SITE, designated SEQ ID:19549, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ

ID:278.

[32917] Another function of GAM281 is therefore inhibition of Centromere protein h (CENPH, Accession NP_075060.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENPH.

[32918] Centromere protein j (CENPJ, Accession NP_060921.2) is another GAM281 target gene, herein designated TARGET GENE. CENPJ BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CENPJ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENPJ BINDING SITE, designated SEQ ID:13565, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32919] Another function of GAM281 is therefore inhibition of Centromere protein j (CENPJ, Accession NP_060921.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENPJ.

[32920] CGI-150 (Accession NP_057164.1) is another GAM281 target gene, herein designated TARGET GENE. CGI-150

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CGI-150, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-150 BINDING SITE, designated SEQ ID:2191, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32921] Another function of GAM281 is therefore inhibition of CGI-150 (Accession NP_057164.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-150.

[32922] CGI-43 (Accession NP_056437.1) is another GAM281 target gene, herein designated TARGET GENE. CGI-43 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CGI-43, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-43 BINDING SITE, designated SEQ ID:14860, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32923] Another function of GAM281 is therefore inhibition of CGI-43 (Accession NP_056437.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-43.

[32924] Chromodomain helicase dna binding protein 5 (CHD5, Accession NP_056372.1) is another GAM281 target gene, herein designated TARGET GENE. CHD5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHD5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHD5 BINDING SITE, designated SEQ ID:2568, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32925] Another function of GAM281 is therefore inhibition of Chromodomain helicase dna binding protein 5 (CHD5, Accession NP_056372.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHD5.

[32926] Chromatin accessibility complex 1 (CHRAC1, Accession NP_059140.1) is another GAM281 target gene, herein designated TARGET GENE. CHRAC1 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of mRNA encoded by CHRAC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRAC1 BINDING SITE, designated SEQ ID:9475, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32927] Another function of GAM281 is therefore inhibition of Chromatin accessibility complex 1 (CHRAC1, Accession NP_059140.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRAC1.

[32928] Carbohydrate (chondroitin) synthase 1 (CHSY1, Accession NP_055733.2) is another GAM281 target gene, herein designated TARGET GENE. CHSY1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHSY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHSY1 BINDING SITE, designated SEQ ID:11924, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ

ID:278.

[32929] Another function of GAM281 is therefore inhibition of Carbohydrate (chondroitin) synthase 1 (CHSY1, Accession NP_055733.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHSY1.

[32930] Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2) is another GAM281 target gene, herein designated TARGET GENE. CIAS1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CIAS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIAS1 BINDING SITE, designated SEQ ID:13461, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32931] Another function of GAM281 is therefore inhibition of Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2), a gene which may mediate protein- protein interactions; contains a leucine rich repeat and therefore may be associated with Familial cold autoinflammatory syndrome, muckle- wells syndrome. Accordingly,

utilities of GAM281 include diagnosis, prevention and treatment of Familial cold autoinflammatory syndrome, muckle- wells syndrome, and of other diseases and clinical conditions associated with CIAS1.

[32932] The function of CIAS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM90.1.CIP29 (Accession NP_115740.3) is another GAM281 target gene, herein designated TARGET GENE. CIP29 BINDING SITE1 and CIP29 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CIP29, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIP29 BINDING SITE1 and CIP29 BINDING SITE2, designated SEQ ID:3509 and SEQ ID:20120 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32933] Another function of GAM281 is therefore inhibition of CIP29 (Accession NP_115740.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CIP29.

[32934] Claudin 14 (CLDN14, Accession NP_652763.1) is another

GAM281 target gene, herein designated TARGET GENE. CLDN14 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CLDN14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLDN14 BINDING SITE, designated SEQ ID:3558, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32935] Another function of GAM281 is therefore inhibition of Claudin 14 (CLDN14, Accession NP_652763.1), a gene which provides structural support for the auditory neuroepithelium. and therefore is associated with Deafness. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Deafness., and of other diseases and clinical conditions associated with CLDN14.

[32936] The function of CLDN14 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2) is another GAM281

target gene, herein designated TARGET GENE. CLECSF12 BINDING SITE1 and CLECSF12 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CLECSF12, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF12 BINDING SITE1 and CLECSF12 BINDING SITE2, designated SEQ ID:16192 and SEQ ID:15296 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32937] Another function of GAM281 is therefore inhibition of C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2), a gene which is a pattern- recognition receptor . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF12.

[32938] The function of CLECSF12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Chloride intracellular channel 5 (CLIC5, Accession NP_058625.1) is another GAM281 target gene,

herein designated TARGET GENE. CLIC5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CLIC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLIC5 BINDING SITE, designated SEQ ID:19116, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32939] Another function of GAM281 is therefore inhibition of Chloride intracellular channel 5 (CLIC5, Accession NP_058625.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLIC5.

[32940] Ceroid-lipofuscinosis, neuronal 6, late infantile, variant (CLN6, Accession NP_060352.1) is another GAM281 target gene, herein designated TARGET GENE. CLN6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLN6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLN6 BINDING SITE, designated SEQ ID:19830, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32941] Another function of GAM281 is therefore inhibition of Ceroid-lipofuscinosis, neuronal 6, late infantile, variant (CLN6, Accession NP_060352.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLN6.

[32942] Ceroid-lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) is another GAM281 target gene, herein designated TARGET GENE. CLN8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLN8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLN8 BINDING SITE, designated SEQ ID:515, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32943] Another function of GAM281 is therefore inhibition of Ceroid-lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with CLN8.

[32944] Cell matrix adhesion regulator (CMAR, Accession NP_005191.2) is another GAM281 target gene, herein designated TARGET GENE. CMAR BINDING SITE1 and CMAR BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CMAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CMAR BINDING SITE1 and CMAR BINDING SITE2, designated SEQ ID:5053 and SEQ ID:18767 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32945] Another function of GAM281 is therefore inhibition of Cell matrix adhesion regulator (CMAR, Accession NP_005191.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CMAR.

[32946] Calponin 2 (CNN2, Accession NP_004359.1) is another GAM281 target gene, herein designated TARGET GENE. CNN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNN2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNN2 BINDING SITE, designated SEQ ID:9959, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32947] Another function of GAM281 is therefore inhibition of Calponin 2 (CNN2, Accession NP_004359.1), a gene which may be involved in the structural organization and/or anchorage of actin filaments. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNN2.

[32948] The function of CNN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.2',3'-cyclic nucleotide 3' phosphodiesterase (CNP, Accession NP_149124.1) is another GAM281 target gene, herein designated TARGET GENE. CNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNP BINDING SITE, designated SEQ ID:606, to the nucleotide sequence

of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32949] Another function of GAM281 is therefore inhibition of 2',3'-cyclic nucleotide 3' phosphodiesterase (CNP, Accession NP_149124.1), a gene which can link tubulin to membranes and may regulate cytoplasmic microtubule distribution. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNP.

[32950] The function of CNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Collagen, type iv, alpha 4 (COL4A4, Accession NP_000083.1) is another GAM281 target gene, herein designated TARGET GENE. COL4A4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by COL4A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL4A4 BINDING SITE, designated SEQ ID:12506, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32951] Another function of GAM281 is therefore inhibition of Collagen, type iv, alpha 4 (COL4A4, Accession NP_000083.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL4A4.

[32952] Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) is another GAM281 target gene, herein designated TARGET GENE. COLEC12 BINDING SITE1 and COLEC12 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by COLEC12, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COLEC12 BINDING SITE1 and COLEC12 BINDING SITE2, designated SEQ ID:12507 and SEQ ID:11525 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32953] Another function of GAM281 is therefore inhibition of Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COLEC12.

[32954] COQ4 (Accession NP_057119.1) is another GAM281 target gene, herein designated TARGET GENE. COQ4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by COQ4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COQ4 BINDING SITE, designated SEQ ID:14708, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32955] Another function of GAM281 is therefore inhibition of COQ4 (Accession NP_057119.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COQ4.

[32956] Coronin, actin binding protein, 1c (CORO1C, Accession NP_055140.1) is another GAM281 target gene, herein designated TARGET GENE. CORO1C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CORO1C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CORO1C BINDING SITE, designated SEQ ID:13595, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32957] Another function of GAM281 is therefore inhibition of Coronin, actin binding protein, 1c (CORO1C, Accession NP_055140.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CORO1C.

[32958] Cox15 homolog, cytochrome c oxidase assembly protein (yeast) (COX15, Accession NP_510870.1) is another GAM281 target gene, herein designated TARGET GENE. COX15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COX15 BINDING SITE, designated SEQ ID:7552, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32959] Another function of GAM281 is therefore inhibition of Cox15 homolog, cytochrome c oxidase assembly protein (yeast) (COX15, Accession NP_510870.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with COX15.

[32960] Carboxypeptidase a4 (CPA4, Accession NP_057436.1) is another GAM281 target gene, herein designated TARGET GENE. CPA4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPA4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPA4 BINDING SITE, designated SEQ ID:8942, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32961] Another function of GAM281 is therefore inhibition of Carboxypeptidase a4 (CPA4, Accession NP_057436.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPA4.

[32962] CPR8 (Accession NP_065790.1) is another GAM281 target gene, herein designated TARGET GENE. CPR8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CPR8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of CPR8 BINDING SITE, designated SEQ ID:13999, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32963] Another function of GAM281 is therefore inhibition of CPR8 (Accession NP_065790.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPR8.

[32964] Carbamoyl-phosphate synthetase 1, mitochondrial (CPS1, Accession NP_001866.2) is another GAM281 target gene, herein designated TARGET GENE. CPS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPS1 BINDING SITE, designated SEQ ID:14493, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32965] Another function of GAM281 is therefore inhibition of Carbamoyl-phosphate synthetase 1, mitochondrial (CPS1, Accession NP_001866.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPS1.

[32966] Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) is another GAM281 target gene, herein designated TARGET GENE. CPSF2 BINDING SITE1 and CPSF2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CPSF2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPSF2 BINDING SITE1 and CPSF2 BINDING SITE2, designated SEQ ID:591 and SEQ ID:1877 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32967] Another function of GAM281 is therefore inhibition of Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPSF2.

[32968] Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000642.2) is another GAM281 target gene, herein designated TARGET GENE. CR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CR1, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CR1 BINDING SITE, designated SEQ ID:17292, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32969] Another function of GAM281 is therefore inhibition of Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000642.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CR1.

[32970] Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000564.1) is another GAM281 target gene, herein designated TARGET GENE. CR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CR1 BINDING SITE, designated SEQ ID:17292, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[32971] Another function of GAM281 is therefore inhibition of Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000564.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CR1.

[32972] Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) is another GAM281 target gene, herein designated TARGET GENE. CRLF3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRLF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRLF3 BINDING SITE, designated SEQ ID:7105, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32973] Another function of GAM281 is therefore inhibition of Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRLF3.

[32974] Cofactor required for sp1 transcriptional activation, sub-

unit 6, 77kda (CRSP6, Accession NP_004259.3) is another GAM281 target gene, herein designated TARGET GENE. CRSP6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRSP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRSP6 BINDING SITE, designated SEQ ID:7661, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32975] Another function of GAM281 is therefore inhibition of Cofactor required for sp1 transcriptional activation, subunit 6, 77kda (CRSP6, Accession NP_004259.3), a gene which is required for Sp1 mediated transcriptional activation with TAF(II)s. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRSP6.

[32976] The function of CRSP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Cartilage associated protein (CRTAP, Accession NP_006362.1) is another GAM281 target gene, herein designated TARGET GENE. CRTAP BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by CRTAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRTAP BINDING SITE, designated SEQ ID:7107, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32977] Another function of GAM281 is therefore inhibition of Cartilage associated protein (CRTAP, Accession NP_006362.1), a gene which is a novel developmentally regulated chick embryo protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRTAP.

[32978] The function of CRTAP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Cysteine sulfinic acid decarboxylase (CSAD, Accession NP_057073.2) is another GAM281 target gene, herein designated TARGET GENE. CSAD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CSAD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of CSAD BINDING SITE, designated SEQ ID:7030, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32979] Another function of GAM281 is therefore inhibition of Cysteine sulfinic acid decarboxylase (CSAD, Accession NP_057073.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSAD.

[32980] CSE-C (Accession NP_061851.1) is another GAM281 target gene, herein designated TARGET GENE. CSE-C BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CSE-C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSE-C BINDING SITE, designated SEQ ID:2336, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32981] Another function of GAM281 is therefore inhibition of CSE-C (Accession NP_061851.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSE-C.

[32982] Cse1 chromosome segregation 1-like (yeast) (CSE1L, Accession NP_803185.1) is another GAM281 target gene, herein designated TARGET GENE. CSE1L BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CSE1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSE1L BINDING SITE, designated SEQ ID:6312, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32983] Another function of GAM281 is therefore inhibition of Cse1 chromosome segregation 1-like (yeast) (CSE1L, Accession NP_803185.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSE1L.

[32984] Casein kinase 1, gamma 2 (CSNK1G2, Accession NP_001310.2) is another GAM281 target gene, herein designated TARGET GENE. CSNK1G2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CSNK1G2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of CSNK1G2 BINDING SITE, designated SEQ ID:14869, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32985] Another function of GAM281 is therefore inhibition of Casein kinase 1, gamma 2 (CSNK1G2, Accession NP_001310.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSNK1G2.

[32986] Casein kinase 2, alpha prime polypeptide (CSNK2A2, Accession NP_001887.1) is another GAM281 target gene, herein designated TARGET GENE. CSNK2A2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CSNK2A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSNK2A2 BINDING SITE, designated SEQ ID:15382, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32987] Another function of GAM281 is therefore inhibition of Casein kinase 2, alpha prime polypeptide (CSNK2A2, Accession NP_001887.1), a gene which catalyzes the phospho-

rylation of serine or threonine residues in proteins. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSNK2A2.

[32988] The function of CSNK2A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.CST (Accession NP_004852.1) is another GAM281 target gene, herein designated TARGET GENE. CST BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CST, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CST BINDING SITE, designated SEQ ID:9756, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32989] Another function of GAM281 is therefore inhibition of CST (Accession NP_004852.1), a gene which nucleotide- sugar transporter. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CST.

[32990] The function of CST and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM221.1.CTEN (Accession NP_116254.3) is another GAM281 target gene, herein designated TARGET GENE. CTEN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTEN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTEN BINDING SITE, designated SEQ ID:14746, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32991] Another function of GAM281 is therefore inhibition of CTEN (Accession NP_116254.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTEN.

[32992] Cardiotrophin 1 (CTF1, Accession NP_001321.1) is another GAM281 target gene, herein designated TARGET GENE. CTF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of CTF1 BINDING SITE, designated SEQ ID:13287, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32993] Another function of GAM281 is therefore inhibition of Cardiotrophin 1 (CTF1, Accession NP_001321.1), a gene which may play a role in cardiac hypertrophy. and therefore may be associated with Cardiac hypertrophy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Cardiac hypertrophy, and of other diseases and clinical conditions associated with CTF1.

[32994] The function of CTF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Cathepsin b (CTSB, Accession NP_680090.1) is another GAM281 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:12465, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[32995] Another function of GAM281 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680090.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[32996] Cathepsin b (CTSB, Accession NP_680092.1) is another GAM281 target gene, herein designated TARGET GENE. CTSB BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CTSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSB BINDING SITE, designated SEQ ID:12465, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32997] Another function of GAM281 is therefore inhibition of Cathepsin b (CTSB, Accession NP_680092.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSB.

[32998] Cathepsin s (CTSS, Accession NP_004070.3) is another

GAM281 target gene, herein designated TARGET GENE. CTSS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSS BINDING SITE, designated SEQ ID:4517, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[32999] Another function of GAM281 is therefore inhibition of Cathepsin s (CTSS, Accession NP_004070.3), a gene which is a lysosomal cysteine (thiol) protease that cleaves elastin. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSS.

[33000] The function of CTSS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Chemokine (c-x-c motif) ligand 16 (CXCL16, Accession NP_071342.1) is another GAM281 target gene, herein designated TARGET GENE. CXCL16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CXCL16, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXCL16 BINDING SITE, designated SEQ ID:17688, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33001] Another function of GAM281 is therefore inhibition of Chemokine (c-x-c motif) ligand 16 (CXCL16, Accession NP_071342.1), a gene which induces calcium mobilization. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXCL16.

[33002] The function of CXCL16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Chemokine (c-x-c motif) ligand 6 (granulocyte chemotactic protein 2) (CXCL6, Accession NP_002984.1) is another GAM281 target gene, herein designated TARGET GENE. CXCL6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CXCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of CXCL6 BINDING SITE, designated SEQ ID:4626, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33003] Another function of GAM281 is therefore inhibition of Chemokine (c-x-c motif) ligand 6 (granulocyte chemotactic protein 2) (CXCL6, Accession NP_002984.1), a gene which is chemotactic for neutrophil granulocytes. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXCL6.

[33004] The function of CXCL6 has been established by previous studies. Rovai et al. (1997) cloned the human GCP2 gene, as well as epithelial cell- derived neutrophil- activating peptide- 78 (ENA78, or SCYB5; 600324). Both coding and noncoding portions of the GCP2 gene share very high nucleotide similarity to ENA78, except for the occurrence of a long interspersed sequence 5- prime of the GCP2 gene. The GCP2 gene encodes a propeptide of 114 amino acids. Despite 85% identity of the first 270 nucleotides 5- prime of the transcription start sites, GCP2 and the other CXC chemokine gene ENA78 showed cell- specific differences in regulation. Wuyts et al. (1997) synthesized and purified a human GCP2 protein of 75 amino acids. In vitro, syn-

thetic GCP2 was an equally active chemoattractant for neutrophilic granulocytes as was natural 75- amino acid GCP2. Synthetic GCP2 did not stimulate eosinophil, monocyte, or lymphocyte chemotaxis. The authors showed that GCP2 binds to the chemokine receptors CXCR1 and CXCR2. In vivo studies in rabbit demonstrated that GCP2 is a potent inflammatory mediator.

[33005]

[33006] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[33007] Rovai, L. E.; Herschman, H. R.; Smith, J. B. : Cloning and characterization of the human granulocyte chemotactic protein- 2 gene. J. Immun. 158: 5257- 5266, 1997. ; and

[33008] Wuyts, A.; van Osselaer, N.; Haelens, A.; Samson, I.; Herdewijn, P.; Ben- Baruch, A.; Oppenheim, J. J.; Proost, P.; van Damme, J. : Characterization of synthetic human granulocyte chemot.

[33009] Further studies establishing the function and utilities of CXCL6 are found in John Hopkins OMIM database record ID 138965, and in cited publications listed in Table 5, which are hereby incorporated by reference.Chromosome x open reading frame 12 (CXorf12, Accession

NP_003483.1) is another GAM281 target gene, herein designated TARGET GENE. CXorf12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CXorf12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXorf12 BINDING SITE, designated SEQ ID:4704, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33010] Another function of GAM281 is therefore inhibition of Chromosome x open reading frame 12 (CXorf12, Accession NP_003483.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXorf12.

[33011] CYCS (Accession NP_061820.1) is another GAM281 target gene, herein designated TARGET GENE. CYCS BINDING SITE1 through CYCS BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by CYCS, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYCS BINDING SITE1 through CYCS BINDING

SITE3, designated SEQ ID:18868, SEQ ID:18991 and SEQ ID:9339 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33012] Another function of GAM281 is therefore inhibition of CYCS (Accession NP_061820.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYCS.

[33013] Cylicin, basic protein of sperm head cytoskeleton 2 (CYLC2, Accession NP_001331.1) is another GAM281 target gene, herein designated TARGET GENE. CYLC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYLC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYLC2 BINDING SITE, designated SEQ ID:15540, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33014] Another function of GAM281 is therefore inhibition of Cylicin, basic protein of sperm head cytoskeleton 2 (CYLC2, Accession NP_001331.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with CYLC2.

[33015] Cytochrome p450, subfamily i (aromatic compound-inducible), polypeptide 2 (CYP1A2, Accession NP_000752.1) is another GAM281 target gene, herein designated TARGET GENE. CYP1A2 BINDING SITE1 through CYP1A2 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by CYP1A2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP1A2 BINDING SITE1 through CYP1A2 BINDING SITE3, designated SEQ ID:18279, SEQ ID:6637 and SEQ ID:13576 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33016] Another function of GAM281 is therefore inhibition of Cytochrome p450, subfamily i (aromatic compound-inducible), polypeptide 2 (CYP1A2, Accession NP_000752.1), a gene which intervenes in an NADPH- dependent electron transport pathway. and therefore may be associated with Porphyria cutanea tarda. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Porphyria cutanea tarda, and of other diseases and clinical conditions associated with CYP1A2.

[33017] The function of CYP1A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1) is another GAM281 target gene, herein designated TARGET GENE. CYP2B6 BINDING SITE1 and CYP2B6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYP2B6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP2B6 BINDING SITE1 and CYP2B6 BINDING SITE2, designated SEQ ID:10618 and SEQ ID:2194 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33018] Another function of GAM281 is therefore inhibition of Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1), a gene which oxidizes a variety of structurally unrelated compounds, including steroids, fatty acids, and xenobiotics. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with CYP2B6.

[33019] The function of CYP2B6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Cytochrome p450, subfamily ivf, polypeptide 3 (leukotriene b4 omega hydroxylase) (CYP4F3, Accession NP_000887.1) is another GAM281 target gene, herein designated TARGET GENE. CYP4F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP4F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP4F3 BINDING SITE, designated SEQ ID:9158, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33020] Another function of GAM281 is therefore inhibition of Cytochrome p450, subfamily ivf, polypeptide 3 (leukotriene b4 omega hydroxylase) (CYP4F3, Accession NP_000887.1), a gene which converts leukotriene B4 into the less active 20- hydroxy- leukotriene B4. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with CYP4F3.

[33021] The function of CYP4F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1.CYP51A1 (Accession NP_000777.1) is another GAM281 target gene, herein designated TARGET GENE. CYP51A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP51A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP51A1 BINDING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33022] Another function of GAM281 is therefore inhibition of CYP51A1 (Accession NP_000777.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP51A1.

[33023] Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1) is another GAM281 target gene, herein designated TARGET GENE. CYP8B1 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of mRNA encoded by CYP8B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP8B1 BINDING SITE, designated SEQ ID:5978, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33024] Another function of GAM281 is therefore inhibition of Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1), a gene which functions in bile acid biosynthesis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP8B1.

[33025] The function of CYP8B1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.D2S448 (Accession XP_056455.2) is another GAM281 target gene, herein designated TARGET GENE. D2S448 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by D2S448, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of D2S448 BINDING SITE, designated SEQ ID:11750, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33026] Another function of GAM281 is therefore inhibition of D2S448 (Accession XP_056455.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with D2S448.

[33027] DBC-1 (Accession NP_066997.3) is another GAM281 target gene, herein designated TARGET GENE. DBC-1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DBC-1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DBC-1 BINDING SITE, designated SEQ ID:12841, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33028] Another function of GAM281 is therefore inhibition of DBC-1 (Accession NP_066997.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DBC-1.

[33029] Debranching enzyme homolog 1 (s. cerevisiae) (DBR1, Accession NP_057300.1) is another GAM281 target gene, herein designated TARGET GENE. DBR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DBR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DBR1 BINDING SITE, designated SEQ ID:7961, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33030] Another function of GAM281 is therefore inhibition of Debranching enzyme homolog 1 (s. cerevisiae) (DBR1, Accession NP_057300.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DBR1.

[33031] Deoxycytidine kinase (DCK, Accession NP_000779.1) is another GAM281 target gene, herein designated TARGET GENE. DCK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DCK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of DCK BINDING SITE, designated SEQ ID:3487, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33032] Another function of GAM281 is therefore inhibition of Deoxycytidine kinase (DCK, Accession NP_000779.1), a gene which mediates the phosphorylation of several deoxyribonucleosides and their analogs. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCK.

[33033] The function of DCK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1.Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) is another GAM281 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:16590, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33034] Another function of GAM281 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[33035] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) is another GAM281 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:16590, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33036] Another function of GAM281 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[33037] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) is another GAM281 target

gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:16590, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33038] Another function of GAM281 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[33039] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) is another GAM281 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:16590,

to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33040] Another function of GAM281 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[33041] Dead/h (asp-glu-ala-asp/his) box polypeptide 31 (DDX31, Accession NP_619526.1) is another GAM281 target gene, herein designated TARGET GENE. DDX31 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DDX31, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX31 BINDING SITE, designated SEQ ID:16338, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33042] Another function of GAM281 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 31 (DDX31, Accession NP_619526.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with DDX31.

[33043] Desmin (DES, Accession NP_001918.2) is another GAM281 target gene, herein designated TARGET GENE. DES BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DES BINDING SITE, designated SEQ ID:14498, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33044] Another function of GAM281 is therefore inhibition of Desmin (DES, Accession NP_001918.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DES.

[33045] Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1) is another GAM281 target gene, herein designated TARGET GENE. DFFB BINDING SITE1 and DFFB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DFFB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DFFB BINDING SITE1 and DFFB BINDING SITE2, designated SEQ ID:2019 and SEQ ID:9091 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33046] Another function of GAM281 is therefore inhibition of Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1), a gene which induces DNA fragmentation and chromatin condensation during apoptosis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DFFB.

[33047] The function of DFFB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Dihydrofolate reductase (DHFR, Accession NP_000782.1) is another GAM281 target gene, herein designated TARGET GENE. DHFR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DHFR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DHFR BINDING SITE, designated SEQ ID:8052, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33048] Another function of GAM281 is therefore inhibition of Dihydrofolate reductase (DHFR, Accession NP_000782.1), a gene which converts dihydrofolate into tetrahydrofolate. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DHFR.

[33049] The function of DHFR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM64.1.Diaphanous homolog 2 (drosophila) (DIAPH2, Accession NP_006720.1) is another GAM281 target gene, herein designated TARGET GENE. DIAPH2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DIAPH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIAPH2 BINDING SITE, designated SEQ ID:14492, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33050] Another function of GAM281 is therefore inhibition of Diaphanous homolog 2 (drosophila) (DIAPH2, Accession NP_006720.1), a gene which may affect in oogenesis and therefore may be associated with Premature ovarian failure . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Premature ovarian failure ., and of other diseases and clinical conditions associated with DIAPH2.

[33051] The function of DIAPH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1.Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1) is another GAM281 target gene, herein designated TARGET GENE. DISC1 BINDING SITE1 and DISC1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DISC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DISC1 BINDING SITE1 and DISC1 BINDING SITE2, designated SEQ ID:1298 and SEQ ID:11285 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33052] Another function of GAM281 is therefore inhibition of Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1), a gene which has globular N- terminal domain(s) and a helical C- terminal domain. and therefore may be associated with Schizophrenia . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Schizophrenia ., and of other diseases and clinical conditions associated with DISC1.

[33053] The function of DISC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.DKFZP434B044 (Accession NP_113664.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP434B044 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434B044, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B044 BINDING SITE, designated SEQ ID:4080, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33054] Another function of GAM281 is therefore inhibition of DK-

FZP434B044 (Accession NP_113664.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B044.

[33055] DKFZP434B1727 (Accession NP_115519.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP434B1727 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434B1727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B1727 BINDING SITE, designated SEQ ID:4014, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33056] Another function of GAM281 is therefore inhibition of DKFZP434B1727 (Accession NP_115519.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B1727.

[33057] DKFZp434C0923 (Accession NP_060068.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp434C0923 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by DKFZp434C0923, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434C0923 BINDING SITE, designated SEQ ID:8235, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33058] Another function of GAM281 is therefore inhibition of DKFZp434C0923 (Accession NP_060068.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434C0923.

[33059] DKFZP434C212 (Accession XP_044196.3) is another GAM281 target gene, herein designated TARGET GENE. DKFZP434C212 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434C212, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434C212 BINDING SITE, designated SEQ ID:8661, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[33060] Another function of GAM281 is therefore inhibition of DKFZP434C212 (Accession XP_044196.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434C212.

[33061] DKFZP434D146 (Accession NP_056410.2) is another GAM281 target gene, herein designated TARGET GENE. DKFZP434D146 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434D146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434D146 BINDING SITE, designated SEQ ID:2209, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33062] Another function of GAM281 is therefore inhibition of DKFZP434D146 (Accession NP_056410.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434D146.

[33063] DKFZp434E2220 (Accession NP_060082.1) is another

GAM281 target gene, herein designated TARGET GENE. DKFZp434E2220 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp434E2220, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434E2220 BINDING SITE, designated SEQ ID:11326, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33064] Another function of GAM281 is therefore inhibition of DKFZp434E2220 (Accession NP_060082.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E2220.

[33065] DKFZP434F0318 (Accession NP_110444.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP434F0318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434F0318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434F0318 BINDING SITE,

designated SEQ ID:16771, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33066] Another function of GAM281 is therefore inhibition of DKFZP434F0318 (Accession NP_110444.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434F0318.

[33067] DKFZp434F1719 (Accession NP_115624.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp434F1719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434F1719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434F1719 BINDING SITE, designated SEQ ID:3951, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33068] Another function of GAM281 is therefore inhibition of DKFZp434F1719 (Accession NP_115624.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZp434F1719.

[33069] DKFZp434K1210 (Accession NP_060076.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp434K1210 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434K1210, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434K1210 BINDING SITE, designated SEQ ID:4195, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33070] Another function of GAM281 is therefore inhibition of DKFZp434K1210 (Accession NP_060076.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434K1210.

[33071] DKFZp547H025 (Accession NP_064546.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp547H025 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547H025, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547H025 BINDING SITE, designated SEQ ID:14246, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33072] Another function of GAM281 is therefore inhibition of DKFZp547H025 (Accession NP_064546.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547H025.

[33073] DKFZp547I094 (Accession NP_115531.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp547I094 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547I094, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547I094 BINDING SITE, designated SEQ ID:1180, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33074] Another function of GAM281 is therefore inhibition of DKFZp547I094 (Accession NP_115531.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547I094.

[33075] DKFZp547P234 (Accession NP_694590.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp547P234 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547P234, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547P234 BINDING SITE, designated SEQ ID:11057, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33076] Another function of GAM281 is therefore inhibition of DKFZp547P234 (Accession NP_694590.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547P234.

[33077] DKFZP564D166 (Accession NP_108648.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP564D166 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts

of mRNA encoded by DKFZP564D166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564D166 BINDING SITE, designated SEQ ID:17204, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33078] Another function of GAM281 is therefore inhibition of DKFZP564D166 (Accession NP_108648.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564D166.

[33079] DKFZP564G092 (Accession NP_056416.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP564G092 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP564G092, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564G092 BINDING SITE, designated SEQ ID:2662, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33080] Another function of GAM281 is therefore inhibition of DKFZP564G092 (Accession NP_056416.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564G092.

[33081] DKFZP564I122 (Accession XP_032397.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP564I122 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564I122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564I122 BINDING SITE, designated SEQ ID:16590, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33082] Another function of GAM281 is therefore inhibition of DKFZP564I122 (Accession XP_032397.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564I122.

[33083] DKFZP564J0863 (Accession NP_056274.1) is another GAM281 target gene, herein designated TARGET GENE.

DKFZP564J0863 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564J0863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564J0863 BINDING SITE, designated SEQ ID:1067, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33084] Another function of GAM281 is therefore inhibition of DKFZP564J0863 (Accession NP_056274.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564J0863.

[33085] DKFZP564J157 (Accession NP_060927.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP564J157 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP564J157, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564J157 BINDING SITE, designated SEQ ID:18768, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33086] Another function of GAM281 is therefore inhibition of DKFZP564J157 (Accession NP_060927.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564J157.

[33087] DKFZP564K0322 (Accession NP_114429.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP564K0322 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564K0322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564K0322 BINDING SITE, designated SEQ ID:17964, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33088] Another function of GAM281 is therefore inhibition of DKFZP564K0322 (Accession NP_114429.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564K0322.

[33089] DKFZp564K142 (Accession NP_115497.2) is another GAM281 target gene, herein designated TARGET GENE. DKFZp564K142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp564K142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp564K142 BINDING SITE, designated SEQ ID:2663, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33090] Another function of GAM281 is therefore inhibition of DKFZp564K142 (Accession NP_115497.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp564K142.

[33091] DKFZP564O0423 (Accession XP_166254.2) is another GAM281 target gene, herein designated TARGET GENE. DKFZP564O0423 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564O0423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DKFZP564O0423 BINDING SITE, designated SEQ ID:10819, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33092] Another function of GAM281 is therefore inhibition of DKFZP564O0423 (Accession XP_166254.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564O0423.

[33093] DKFZP564O0523 (Accession NP_115496.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP564O0523 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564O0523, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564O0523 BINDING SITE, designated SEQ ID:3686, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33094] Another function of GAM281 is therefore inhibition of DKFZP564O0523 (Accession NP_115496.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZP564O0523.

[33095] DKFZP566D1346 (Accession NP_110443.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP566D1346 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP566D1346, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566D1346 BINDING SITE, designated SEQ ID:10539, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33096] Another function of GAM281 is therefore inhibition of DKFZP566D1346 (Accession NP_110443.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566D1346.

[33097] DKFZP566I1024 (Accession NP_056226.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP566I1024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP566I1024, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566I1024 BINDING SITE, designated SEQ ID:12353, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33098] Another function of GAM281 is therefore inhibition of DKFZP566I1024 (Accession NP_056226.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566I1024.

[33099] DKFZp586C0721 (Accession XP_098416.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp586C0721 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp586C0721, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp586C0721 BINDING SITE, designated SEQ ID:12173, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33100] Another function of GAM281 is therefore inhibition of DK-

FZp586C0721 (Accession XP_098416.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp586C0721.

[33101] DKFZP586D0919 (Accession NP_056248.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZP586D0919 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586D0919, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586D0919 BINDING SITE, designated SEQ ID:11134, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33102] Another function of GAM281 is therefore inhibition of DKFZP586D0919 (Accession NP_056248.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586D0919.

[33103] DKFZp667B1218 (Accession NP_808881.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp667B1218 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by DKFZp667B1218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667B1218 BINDING SITE, designated SEQ ID:15574, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33104] Another function of GAM281 is therefore inhibition of DKFZp667B1218 (Accession NP_808881.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp667B1218.

[33105] DKFZp667E0512 (Accession XP_117353.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp667E0512 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp667E0512, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667E0512 BINDING SITE, designated SEQ ID:8492, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[33106] Another function of GAM281 is therefore inhibition of DKFZp667E0512 (Accession XP_117353.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp667E0512.

[33107] DKFZp761B107 (Accession NP_775734.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761B107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761B107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B107 BINDING SITE, designated SEQ ID:13571, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33108] Another function of GAM281 is therefore inhibition of DKFZp761B107 (Accession NP_775734.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B107.

[33109] DKFZp761B128 (Accession NP_689650.1) is another

GAM281 target gene, herein designated TARGET GENE. DKFZp761B128 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761B128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B128 BINDING SITE, designated SEQ ID:17969, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33110] Another function of GAM281 is therefore inhibition of DKFZp761B128 (Accession NP_689650.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B128.

[33111] DKFZp761H039 (Accession NP_061181.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761H039 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761H039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761H039 BINDING SITE,

designated SEQ ID:15190, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33112] Another function of GAM281 is therefore inhibition of DKFZp761H039 (Accession NP_061181.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761H039.

[33113] DKFZp761I2123 (Accession XP_166582.2) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761I2123 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761I2123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761I2123 BINDING SITE, designated SEQ ID:12187, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33114] Another function of GAM281 is therefore inhibition of DKFZp761I2123 (Accession XP_166582.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

DKFZp761I2123.

[33115] DKFZp761J139 (Accession NP_115656.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761J139 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761J139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761J139 BINDING SITE, designated SEQ ID:5768, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33116] Another function of GAM281 is therefore inhibition of DKFZp761J139 (Accession NP_115656.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761J139.

[33117] DKFZp761K1423 (Accession NP_060892.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761K1423 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761K1423, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761K1423 BINDING SITE, designated SEQ ID:7711, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33118] Another function of GAM281 is therefore inhibition of DKFZp761K1423 (Accession NP_060892.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761K1423.

[33119] DKFZp761N1114 (Accession XP_086327.6) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761N1114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761N1114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761N1114 BINDING SITE, designated SEQ ID:13529, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33120] Another function of GAM281 is therefore inhibition of DKFZp761N1114 (Accession XP_086327.6) . Accordingly,

utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761N1114.

[33121] DKFZp761O0113 (Accession NP_060879.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761O0113 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761O0113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761O0113 BINDING SITE, designated SEQ ID:7699, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33122] Another function of GAM281 is therefore inhibition of DKFZp761O0113 (Accession NP_060879.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761O0113.

[33123] DKFZp761P1121 (Accession NP_690870.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp761P1121 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

DKFZp761P1121, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761P1121 BINDING SITE, designated SEQ ID:9147, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33124] Another function of GAM281 is therefore inhibition of DKFZp761P1121 (Accession NP_690870.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761P1121.

[33125] DKFZp762C2414 (Accession NP_848637.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp762C2414 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762C2414, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762C2414 BINDING SITE, designated SEQ ID:4056, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33126] Another function of GAM281 is therefore inhibition of DKFZp762C2414 (Accession NP_848637.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762C2414.

[33127] DKFZp762H185 (Accession XP_172976.2) is another GAM281 target gene, herein designated TARGET GENE. DKFZp762H185 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762H185, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762H185 BINDING SITE, designated SEQ ID:13803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33128] Another function of GAM281 is therefore inhibition of DKFZp762H185 (Accession XP_172976.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762H185.

[33129] DKFZp762I137 (Accession NP_689624.1) is another GAM281 target gene, herein designated TARGET GENE.

DKFZp762I137 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762I137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762I137 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33130] Another function of GAM281 is therefore inhibition of DKFZp762I137 (Accession NP_689624.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762I137.

[33131] DKFZp762I194 (Accession NP_689597.1) is another GAM281 target gene, herein designated TARGET GENE. DKFZp762I194 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762I194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762I194 BINDING SITE, designated SEQ ID:6884, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33132] Another function of GAM281 is therefore inhibition of DKFZp762I194 (Accession NP_689597.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762I194.

[33133] DKFZp762L0311 (Accession NP_061189.2) is another GAM281 target gene, herein designated TARGET GENE. DKFZp762L0311 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762L0311, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762L0311 BINDING SITE, designated SEQ ID:9194, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33134] Another function of GAM281 is therefore inhibition of DKFZp762L0311 (Accession NP_061189.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762L0311.

[33135] Discs, large homolog 2, chapsyn-110 (drosophila) (DLG2, Accession NP_001355.1) is another GAM281 target gene, herein designated TARGET GENE. DLG2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DLG2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DLG2 BINDING SITE, designated SEQ ID:9202, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33136] Another function of GAM281 is therefore inhibition of Discs, large homolog 2, chapsyn-110 (drosophila) (DLG2, Accession NP_001355.1), a gene which may mediate organized clustering of NMDA receptors . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DLG2.

[33137] The function of DLG2 has been established by previous studies. The proper distribution of voltage- gated and ligand- gated ion channels on the neuronal surface is critical for the processing and transmission of electrical signals in neurons. Kim et al. (1995) hypothesized that potential an-

choring molecules bind to the C- terminal intracellular tail of Shaker subfamily potassium channels. Using a yeast 2-hybrid screen with the C terminus of the rat Shaker sub-family member Kv1.4 (see OMIM Ref. No. KCNA4; 176266) as bait, they isolated partial human brain cDNAs encoding PSD95 (OMIM Ref. No. 602887), SAP97 (OMIM Ref. No. 601014), and DLG2. All 3 proteins are members of the 'membrane- associated guanylate kinase' (MAGUK) family. Kim et al. (1996) isolated additional cDNAs corresponding to the entire coding region of DLG2, which they called 'channel- associated protein of synapses- 110' (chapsyn-110). Like PSD95 and SAP97, the predicted 870- amino acid chapsyn- 110 protein contains 3 PDZ domains, an SH3 domain, and a guanylate kinase homology region. The chapsyn- 110 protein is 78%, 71%, and 57% identical to SAP97, PSD95, and the Drosophila 'discs large' protein, respectively. Using immunohistochemical analysis of rat brain, these authors found that chapsyn- 110 has a so-matodendritic expression pattern that overlaps partly with PSD95 but that contrasts with the axonal distribution of SAP97. When expressed in mammalian cells, chapsyn-110 and PSD95 each mediated the clustering of both NMDA receptors (e.g., 138249) and potassium channels.

Chapsyn- 110 and PSD95 heteromultimerized with each other and were recruited into the same NMDA receptor and potassium channel clusters. Kim et al. (1996) suggested that these 2 MAGUK proteins may interact at postsynaptic sites to form a multimeric scaffold for the clustering of receptors, ion channels, and associated signaling proteins. Northern blot analysis indicated that chapsyn-110 is expressed predominantly in the rat brain, where a major 6- kb mRNA and a minor 5- kb mRNA were detected.

[33138]

[33139] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[33140] Kim, E.; Cho, K.- O.; Rothschild, A.; Sheng, M. : Heteromultimerization and NMDA receptor- clustering activity of Chapsyn- 110, a member of the PSD- 95 family of proteins. Neuron 17: 103- 113, 1996. ; and

[33141] Kim, E.; Niethammer, M.; Rothschild, A.; Jan, Y. N.; Sheng, M. : Clustering of Shaker- type K+ channels by interaction with a family of membrane- associated guanylate kinases. Nature 378:.

[33142] Further studies establishing the function and utilities of

DLG2 are found in John Hopkins OMIM database record ID 603583, and in cited publications listed in Table 5, which are hereby incorporated by reference.Dynein, axonemal, heavy polypeptide 11 (DNAH11, Accession NP_003768.1) is another GAM281 target gene, herein designated TARGET GENE. DNAH11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DNAH11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAH11 BINDING SITE, designated SEQ ID:1214, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33143] Another function of GAM281 is therefore inhibition of Dynein, axonemal, heavy polypeptide 11 (DNAH11, Accession NP_003768.1), a gene which may function as a motor protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAH11.

[33144] The function of DNAH11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Dnaj (hsp40) homolog, subfamily b, member

5 (DNAJB5, Accession NP_036398.2) is another GAM281 target gene, herein designated TARGET GENE. DNAJB5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DNAJB5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAJB5 BINDING SITE, designated SEQ ID:5815, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33145] Another function of GAM281 is therefore inhibition of Dnaj (hsp40) homolog, subfamily b, member 5 (DNAJB5, Accession NP_036398.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAJB5.

[33146] Dynein, cytoplasmic, light polypeptide 2a (DNCL2A, Accession NP_808853.1) is another GAM281 target gene, herein designated TARGET GENE. DNCL2A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DNCL2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of DNCL2A BINDING SITE, designated SEQ ID:949, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33147] Another function of GAM281 is therefore inhibition of Dynein, cytoplasmic, light polypeptide 2a (DNCL2A, Accession NP_808853.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNCL2A.

[33148] Dolichyl-phosphate mannosyltransferase polypeptide 2, regulatory subunit (DPM2, Accession NP_689903.1) is another GAM281 target gene, herein designated TARGET GENE. DPM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DPM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DPM2 BINDING SITE, designated SEQ ID:3466, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33149] Another function of GAM281 is therefore inhibition of Dolichyl-phosphate mannosyltransferase polypeptide 2, regulatory subunit (DPM2, Accession NP_689903.1) . Ac-

cordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DPM2.

[33150] DRIM (Accession NP_055318.1) is another GAM281 target gene, herein designated TARGET GENE. DRIM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DRIM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRIM BINDING SITE, designated SEQ ID:6633, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33151] Another function of GAM281 is therefore inhibition of DRIM (Accession NP_055318.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRIM.

[33152] Dentatorubral-pallidoluysian atrophy (atrophin-1) (DRPLA, Accession NP_001931.1) is another GAM281 target gene, herein designated TARGET GENE. DRPLA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DRPLA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRPLA BINDING SITE, designated SEQ ID:9796, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33153] Another function of GAM281 is therefore inhibition of Dentatorubral-pallidoluysian atrophy (atrophin-1) (DRPLA, Accession NP_001931.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRPLA.

[33154] Desmocollin 3 (DSC3, Accession NP_001932.1) is another GAM281 target gene, herein designated TARGET GENE. DSC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC3 BINDING SITE, designated SEQ ID:7559, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33155] Another function of GAM281 is therefore inhibition of Desmocollin 3 (DSC3, Accession NP_001932.1), a gene which is a component of intercellular desmosome junc-

tions. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC3.

[33156] The function of DSC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Desmocollin 3 (DSC3, Accession NP_077741.1) is another GAM281 target gene, herein designated TARGET GENE. DSC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC3 BINDING SITE, designated SEQ ID:7559, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33157] Another function of GAM281 is therefore inhibition of Desmocollin 3 (DSC3, Accession NP_077741.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC3.

[33158] The function of DSC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1) is another GAM281 target gene, herein designated TARGET GENE. DSCR6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSCR6 BINDING SITE, designated SEQ ID:14954, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33159] Another function of GAM281 is therefore inhibition of Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSCR6.

[33160] DUPLIN (Accession XP_208760.3) is another GAM281 target gene, herein designated TARGET GENE. DUPLIN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DUPLIN, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUPLIN BINDING SITE, designated SEQ ID:6863, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33161] Another function of GAM281 is therefore inhibition of DUPLIN (Accession XP_208760.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUPLIN.

[33162] Dual specificity phosphatase 19 (DUSP19, Accession NP_543152.1) is another GAM281 target gene, herein designated TARGET GENE. DUSP19 BINDING SITE1 and DUSP19 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DUSP19, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP19 BINDING SITE1 and DUSP19 BINDING SITE2, designated SEQ ID:5768 and SEQ ID:15367 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33163] Another function of GAM281 is therefore inhibition of

Dual specificity phosphatase 19 (DUSP19, Accession NP_543152.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP19.

[33164] Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1) is another GAM281 target gene, herein designated TARGET GENE. DYRK1A BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DYRK1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DYRK1A BINDING SITE, designated SEQ ID:10913, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33165] Another function of GAM281 is therefore inhibition of Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1), a gene which regulates cell proliferation and may be involved in brain development . and therefore may be associated with Down syndrome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Down syndrome,

and of other diseases and clinical conditions associated with DYRK1A.

[33166] The function of DYRK1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Endometrial bleeding associated factor (left-right determination, factor a; transforming growth factor beta superfamily) (EBAF, Accession NP_003231.2) is another GAM281 target gene, herein designated TARGET GENE. EBAF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EBAF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EBAF BINDING SITE, designated SEQ ID:18275, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33167] Another function of GAM281 is therefore inhibition of Endometrial bleeding associated factor (left-right determination, factor a; transforming growth factor beta superfamily) (EBAF, Accession NP_003231.2), a gene which LEFT- RIGHT AXIS MALFORMATIONS and therefore is associated with Left- right axis malformations. Accordingly,

utilities of GAM281 include diagnosis, prevention and treatment of Left- right axis malformations, and of other diseases and clinical conditions associated with EBAF.

[33168] The function of EBAF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Endothelial differentiation, sphingolipid g-protein-coupled receptor, 8 (EDG8, Accession NP_110387.1) is another GAM281 target gene, herein designated TARGET GENE. EDG8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EDG8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDG8 BINDING SITE, designated SEQ ID:12263, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33169] Another function of GAM281 is therefore inhibition of Endothelial differentiation, sphingolipid g-protein-coupled receptor, 8 (EDG8, Accession NP_110387.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with EDG8.

[33170] EEF2K (Accession NP_037434.1) is another GAM281 target gene, herein designated TARGET GENE. EEF2K BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EEF2K, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EEF2K BINDING SITE, designated SEQ ID:2595, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33171] Another function of GAM281 is therefore inhibition of EEF2K (Accession NP_037434.1), a gene which phosphorylates serine or threonine on the eukaryotic elongation factor- 2 and therefore may be associated with Systemic lupus erythematosus and cancer. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Systemic lupus erythematosus and cancer, and of other diseases and clinical conditions associated with EEF2K.

[33172] The function of EEF2K and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Egf-like-domain, multiple 4 (EGFL4, Acces-

sion XP_290821.1) is another GAM281 target gene, herein designated TARGET GENE. EGFL4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by EGFL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EGFL4 BINDING SITE, designated SEQ ID:5780, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33173] Another function of GAM281 is therefore inhibition of Egf-like-domain, multiple 4 (EGFL4, Accession XP_290821.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EGFL4.

[33174] Eh-domain containing 1 (EHD1, Accession NP_006786.2) is another GAM281 target gene, herein designated TARGET GENE. EHD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EHD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EHD1 BINDING SITE, designated SEQ ID:7065, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[33175] Another function of GAM281 is therefore inhibition of Eh-domain containing 1 (EHD1, Accession NP_006786.2), a gene which may be involved in ligand- initiated endocytosis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EHD1.

[33176] The function of EHD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Eh-domain containing 2 (EHD2, Accession NP_055416.2) is another GAM281 target gene, herein designated TARGET GENE. EHD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EHD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EHD2 BINDING SITE, designated SEQ ID:4837, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33177] Another function of GAM281 is therefore inhibition of Eh-domain containing 2 (EHD2, Accession NP_055416.2) . Accordingly, utilities of GAM281 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with EHD2.

[33178] Eukaryotic translation initiation factor 2c, 1 (EIF2C1, Accession NP_036331.1) is another GAM281 target gene, herein designated TARGET GENE. EIF2C1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EIF2C1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF2C1 BINDING SITE, designated SEQ ID:2761, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33179] Another function of GAM281 is therefore inhibition of Eukaryotic translation initiation factor 2c, 1 (EIF2C1, Accession NP_036331.1), a gene which plays an important role in the eukaryotic peptide chain initiation process. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF2C1.

[33180] The function of EIF2C1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM223.1.Eukaryotic translation initiation factor 2, subunit 3 gamma, 52kda (EIF2S3, Accession NP_001406.1) is another GAM281 target gene, herein designated TARGET GENE. EIF2S3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EIF2S3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF2S3 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33181] Another function of GAM281 is therefore inhibition of Eukaryotic translation initiation factor 2, subunit 3 gamma, 52kda (EIF2S3, Accession NP_001406.1), a gene which functions in the early steps of protein synthesis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF2S3.

[33182] The function of EIF2S3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Eukaryotic translation initiation factor 5a2 (EIF5A2, Accession NP_065123.1) is another GAM281 tar-

get gene, herein designated TARGET GENE. EIF5A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EIF5A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF5A2 BINDING SITE, designated SEQ ID:8340, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33183] Another function of GAM281 is therefore inhibition of Eukaryotic translation initiation factor 5a2 (EIF5A2, Accession NP_065123.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF5A2.

[33184] ELP3 (Accession NP_060561.3) is another GAM281 target gene, herein designated TARGET GENE. ELP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ELP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ELP3 BINDING SITE, designated SEQ ID:14236, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[33185] Another function of GAM281 is therefore inhibition of ELP3 (Accession NP_060561.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ELP3.

[33186] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690881.1) is another GAM281 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:13462, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33187] Another function of GAM281 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690881.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[33188] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_038475.2) is another GAM281 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:13462, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33189] Another function of GAM281 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_038475.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[33190] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690885.1) is another GAM281 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of

mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:13462, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33191] Another function of GAM281 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690885.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[33192] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690883.1) is another GAM281 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:13462, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33193] Another function of GAM281 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690883.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[33194] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690882.1) is another GAM281 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:13462, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33195] Another function of GAM281 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690882.1) . Ac-

cordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[33196] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690884.1) is another GAM281 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:13462, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33197] Another function of GAM281 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690884.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[33198] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690880.1) is

another GAM281 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:13462, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33199] Another function of GAM281 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690880.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[33200] Endonuclease g-like 1 (ENDOGL1, Accession NP_005098.1) is another GAM281 target gene, herein designated TARGET GENE. ENDOGL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ENDOGL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of ENDOGL1 BINDING SITE, designated SEQ ID:5031, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33201] Another function of GAM281 is therefore inhibition of Endonuclease g-like 1 (ENDOGL1, Accession NP_005098.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENDOGL1.

[33202] Epiregulin (EREG, Accession NP_001423.1) is another GAM281 target gene, herein designated TARGET GENE. EREG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EREG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EREG BINDING SITE, designated SEQ ID:17956, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33203] Another function of GAM281 is therefore inhibition of Epiregulin (EREG, Accession NP_001423.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with EREG.

[33204] ERN2 (Accession NP_150296.1) is another GAM281 target gene, herein designated TARGET GENE. ERN2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ERN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERN2 BINDING SITE, designated SEQ ID:12665, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33205] Another function of GAM281 is therefore inhibition of ERN2 (Accession NP_150296.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERN2.

[33206] Ero1-like (s. cerevisiae) (ERO1L, Accession NP_055399.1) is another GAM281 target gene, herein designated TARGET GENE. ERO1L BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ERO1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ERO1L BINDING SITE, designated

SEQ ID:11477, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33207] Another function of GAM281 is therefore inhibition of Ero1-like (s. cerevisiae) (ERO1L, Accession NP_055399.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ERO1L.

[33208] Extra spindle poles like 1 (s. cerevisiae) (ESPL1, Accession NP_036423.1) is another GAM281 target gene, herein designated TARGET GENE. ESPL1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ESPL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ESPL1 BINDING SITE, designated SEQ ID:20090, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33209] Another function of GAM281 is therefore inhibition of Extra spindle poles like 1 (s. cerevisiae) (ESPL1, Accession NP_036423.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with ESPL1.

[33210] Ellis van creveld syndrome (EVC, Accession NP_714928.1) is another GAM281 target gene, herein designated TARGET GENE. EVC BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EVC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVC BINDING SITE, designated SEQ ID:18115, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33211] Another function of GAM281 is therefore inhibition of Ellis van creveld syndrome (EVC, Accession NP_714928.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVC.

[33212] Ellis van creveld syndrome (EVC, Accession NP_055371.1) is another GAM281 target gene, herein designated TARGET GENE. EVC BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EVC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVC BINDING SITE, designated SEQ ID:18115, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33213] Another function of GAM281 is therefore inhibition of Ellis van creveld syndrome (EVC, Accession NP_055371.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVC.

[33214] EVER1 (Accession NP_009198.3) is another GAM281 target gene, herein designated TARGET GENE. EVER1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EVER1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVER1 BINDING SITE, designated SEQ ID:14255, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33215] Another function of GAM281 is therefore inhibition of EVER1 (Accession NP_009198.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with EVER1.

[33216] Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) is another GAM281 target gene, herein designated TARGET GENE. EVI5 BINDING SITE1 and EVI5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by EVI5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVI5 BINDING SITE1 and EVI5 BINDING SITE2, designated SEQ ID:11607 and SEQ ID:7219 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33217] Another function of GAM281 is therefore inhibition of Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVI5.

[33218] F11R (Accession NP_058642.1) is another GAM281 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:2664, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33219] Another function of GAM281 is therefore inhibition of F11R (Accession NP_058642.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[33220] F11R (Accession NP_653087.1) is another GAM281 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:2664, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33221] Another function of GAM281 is therefore inhibition of F11R (Accession NP_653087.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[33222] F11R (Accession NP_653086.1) is another GAM281 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:2664, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33223] Another function of GAM281 is therefore inhibition of F11R (Accession NP_653086.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[33224] F11R (Accession NP_653085.1) is another GAM281 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:2664, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[33225] Another function of GAM281 is therefore inhibition of F11R (Accession NP_653085.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[33226] Coagulation factor ii (thrombin) receptor-like 2 (F2RL2, Accession NP_004092.1) is another GAM281 target gene, herein designated TARGET GENE. F2RL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F2RL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F2RL2 BINDING SITE, designated SEQ ID:10122, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33227] Another function of GAM281 is therefore inhibition of Coagulation factor ii (thrombin) receptor-like 2 (F2RL2, Accession NP_004092.1), a gene which receptor for activated thrombin coupled to g proteins that stimulate phosphoinositide hydrolysis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F2RL2.

[33228] The function of F2RL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Coagulation factor ii (thrombin) receptor-like 3 (F2RL3, Accession NP_003941.1) is another GAM281 target gene, herein designated TARGET GENE. F2RL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F2RL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F2RL3 BINDING SITE, designated SEQ ID:4234, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33229] Another function of GAM281 is therefore inhibition of Coagulation factor ii (thrombin) receptor-like 3 (F2RL3, Accession NP_003941.1), a gene which Protease- activated receptor 4; G protein- coupled receptor that increases phosphoinositide hydrolysis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F2RL3.

[33230] The function of F2RL3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM72.1.Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1) is another GAM281 target gene, herein designated TARGET GENE. F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F3 BINDING SITE, designated SEQ ID:18492, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33231] Another function of GAM281 is therefore inhibition of Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1), a gene which functions in normal hemostasis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F3.

[33232] The function of F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Coagulation factor v (proaccelerin, labile factor) (F5, Accession NP_000121.1) is another GAM281

target gene, herein designated TARGET GENE. F5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by F5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F5 BINDING SITE, designated SEQ ID:7269, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33233] Another function of GAM281 is therefore inhibition of Coagulation factor v (proaccelerin, labile factor) (F5, Accession NP_000121.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F5.

[33234] Fatty acid binding protein 2, intestinal (FABP2, Accession NP_000125.1) is another GAM281 target gene, herein designated TARGET GENE. FABP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FABP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FABP2 BINDING SITE, designated SEQ ID:2195, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[33235] Another function of GAM281 is therefore inhibition of Fatty acid binding protein 2, intestinal (FABP2, Accession NP_000125.1), a gene which may have a role in dietary fat uptake or processing. and therefore may be associated with Cardiovascular disease and type 2 diabetes. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Cardiovascular disease and type 2 diabetes., and of other diseases and clinical conditions associated with FABP2.

[33236] The function of FABP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Family with sequence similarity 13, member a1 (FAM13A1, Accession NP_055698.1) is another GAM281 target gene, herein designated TARGET GENE. FAM13A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FAM13A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FAM13A1 BINDING SITE, designated SEQ ID:9972, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[33237] Another function of GAM281 is therefore inhibition of Family with sequence similarity 13, member a1 (FAM13A1, Accession NP_055698.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAM13A1.

[33238] Fanconi anemia, complementation group c (FANCC, Accession NP_000127.1) is another GAM281 target gene, herein designated TARGET GENE. FANCC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCC BINDING SITE, designated SEQ ID:15368, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33239] Another function of GAM281 is therefore inhibition of Fanconi anemia, complementation group c (FANCC, Accession NP_000127.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FANCC.

[33240] Fanconi anemia, complementation group e (FANCE, Ac-

cession NP_068741.1) is another GAM281 target gene, herein designated TARGET GENE. FANCE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCE BINDING SITE, designated SEQ ID:5597, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33241] Another function of GAM281 is therefore inhibition of Fanconi anemia, complementation group e (FANCE, Accession NP_068741.1), a gene which is a possible regulator of lymphocyte and platelet function. and therefore is associated with Fanconi anemia, complementation group e. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Fanconi anemia, complementation group e., and of other diseases and clinical conditions associated with FANCE.

[33242] The function of FANCE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Fanconi anemia, complementation group f

(FANCF, Accession NP_073562.1) is another GAM281 target gene, herein designated TARGET GENE. FANCF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCF BINDING SITE, designated SEQ ID:5816, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33243] Another function of GAM281 is therefore inhibition of Fanconi anemia, complementation group f (FANCF, Accession NP_073562.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FANCF.

[33244] FAT3 (Accession XP_061871.5) is another GAM281 target gene, herein designated TARGET GENE. FAT3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FAT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FAT3 BINDING SITE, designated SEQ ID:8236, to the nucleotide sequence

of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33245] Another function of GAM281 is therefore inhibition of FAT3 (Accession XP_061871.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAT3.

[33246] F-box and leucine-rich repeat protein 7 (FBXL7, Accession NP_036436.1) is another GAM281 target gene, herein designated TARGET GENE. FBXL7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FBXL7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXL7 BINDING SITE, designated SEQ ID:11584, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33247] Another function of GAM281 is therefore inhibition of F-box and leucine-rich repeat protein 7 (FBXL7, Accession NP_036436.1), a gene which may be involved in in phosphorylation- dependent ubiquitination. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FBXL7.

[33248] The function of FBXL7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.F-box only protein 27 (FBXO27, Accession XP_059045.1) is another GAM281 target gene, herein designated TARGET GENE. FBXO27 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXO27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO27 BINDING SITE, designated SEQ ID:16526, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33249] Another function of GAM281 is therefore inhibition of F-box only protein 27 (FBXO27, Accession XP_059045.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO27.

[33250] F-box only protein 27 (FBXO27, Accession NP_849142.1) is another GAM281 target gene, herein designated TARGET GENE. FBXO27 BINDING SITE is a target binding site

found in the 3` untranslated region of multiple transcripts of mRNA encoded by FBXO27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO27 BINDING SITE, designated SEQ ID:16526, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33251] Another function of GAM281 is therefore inhibition of F-box only protein 27 (FBXO27, Accession NP_849142.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO27.

[33252] Fc fragment of iga, receptor for (FCAR, Accession NP_579811.1) is another GAM281 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:10448, SEQ

ID:10448 and SEQ ID:10448 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33253] Another function of GAM281 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579811.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[33254] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fc fragment of iga, receptor for (FCAR, Accession NP_579803.1) is another GAM281 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:10448, SEQ ID:10448 and SEQ ID:10448 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33255] Another function of GAM281 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579803.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[33256] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fc fragment of iga, receptor for (FCAR, Accession NP_001991.1) is another GAM281 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding

sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:3819, SEQ ID:17643 and SEQ ID:17643 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33257] Another function of GAM281 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_001991.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[33258] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fc fragment of iga, receptor for (FCAR, Accession NP_579807.1) is another GAM281 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites

found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:10448, SEQ ID:497 and SEQ ID:2141 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33259] Another function of GAM281 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579807.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[33260] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) is another GAM281 target gene, herein

designated TARGET GENE. FER1L4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FER1L4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FER1L4 BINDING SITE, designated SEQ ID:11291, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33261] Another function of GAM281 is therefore inhibition of Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FER1L4.

[33262] Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) is another GAM281 target gene, herein designated TARGET GENE. FER1L4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FER1L4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FER1L4 BINDING SITE, designated SEQ ID:11291, to the nucleotide sequence of GAM281

RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33263] Another function of GAM281 is therefore inhibition of Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FER1L4.

[33264] Fasciculation and elongation protein zeta 1 (zygin i) (FEZ1, Accession NP_072043.1) is another GAM281 target gene, herein designated TARGET GENE. FEZ1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FEZ1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FEZ1 BINDING SITE, designated SEQ ID:5204, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33265] Another function of GAM281 is therefore inhibition of Fasciculation and elongation protein zeta 1 (zygin i) (FEZ1, Accession NP_072043.1), a gene which Zygin 1; may have a role in axonal outgrowth; has similarity to C. elegans UNC- 76. Accordingly, utilities of GAM281 include diag-

nosis, prevention and treatment of diseases and clinical conditions associated with FEZ1.

[33266] The function of FEZ1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Fibroblast growth factor 2 (basic) (FGF2, Accession NP_001997.3) is another GAM281 target gene, herein designated TARGET GENE. FGF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FGF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF2 BINDING SITE, designated SEQ ID:11604, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33267] Another function of GAM281 is therefore inhibition of Fibroblast growth factor 2 (basic) (FGF2, Accession NP_001997.3), a gene which the Basic fibroblast growth factor 2; is mitogenic, angiogenic, and neurotrophic factor. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF2.

[33268] The function of FGF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM36.1.Fibroblast growth factor 5 (FGF5, Accession NP_004455.1) is another GAM281 target gene, herein designated TARGET GENE. FGF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF5 BINDING SITE, designated SEQ ID:14382, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33269] Another function of GAM281 is therefore inhibition of Fibroblast growth factor 5 (FGF5, Accession NP_004455.1), a gene which induces transformation and may regulate neuronal differentiation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF5.

[33270] The function of FGF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM106.1.Fibroblast growth factor 5 (FGF5, Accession NP_149134.1) is another GAM281 target gene, herein designated TARGET GENE. FGF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF5 BINDING SITE, designated SEQ ID:14382, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33271] Another function of GAM281 is therefore inhibition of Fibroblast growth factor 5 (FGF5, Accession NP_149134.1), a gene which induces transformation and may regulate neuronal differentiation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF5.

[33272] The function of FGF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.1.Four and a half lim domains 2 (FHL2, Accession NP_001441.2) is another GAM281 target gene, herein designated TARGET GENE. FHL2 BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FHL2 BINDING SITE, designated SEQ ID:16589, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33273] Another function of GAM281 is therefore inhibition of Four and a half lim domains 2 (FHL2, Accession NP_001441.2), a gene which Contains four LIM domains and an additional zinc finger. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FHL2.

[33274] The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.FISH (Accession NP_055446.1) is another GAM281 target gene, herein designated TARGET GENE. FISH BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FISH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FISH BINDING SITE, designated SEQ ID:13261, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33275] Another function of GAM281 is therefore inhibition of FISH (Accession NP_055446.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FISH.

[33276] Fk506 binding protein 9, 63 kda (FKBP9, Accession NP_009201.1) is another GAM281 target gene, herein designated TARGET GENE. FKBP9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FKBP9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FKBP9 BINDING SITE, designated SEQ ID:7851, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33277] Another function of GAM281 is therefore inhibition of Fk506 binding protein 9, 63 kda (FKBP9, Accession NP_009201.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FKBP9.

[33278] FLJ00060 (Accession XP_028154.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ00060 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ00060, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00060 BINDING SITE, designated SEQ ID:11528, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33279] Another function of GAM281 is therefore inhibition of FLJ00060 (Accession XP_028154.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00060.

[33280] FLJ10101 (Accession NP_078994.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10101 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10101 BINDING SITE, designated SEQ ID:9189, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33281] Another function of GAM281 is therefore inhibition of FLJ10101 (Accession NP_078994.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10101.

[33282] FLJ10232 (Accession NP_060503.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10232 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10232, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10232 BINDING SITE, designated SEQ ID:19236, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33283] Another function of GAM281 is therefore inhibition of FLJ10232 (Accession NP_060503.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10232.

[33284] FLJ10298 (Accession NP_060520.2) is another GAM281

target gene, herein designated TARGET GENE. FLJ10298 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10298 BINDING SITE, designated SEQ ID:2615, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33285] Another function of GAM281 is therefore inhibition of FLJ10298 (Accession NP_060520.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10298.

[33286] FLJ10346 (Accession NP_060535.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10346 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10346, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10346 BINDING SITE, designated SEQ ID:19219, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33287] Another function of GAM281 is therefore inhibition of FLJ10346 (Accession NP_060535.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10346.

[33288] FLJ10520 (Accession NP_060594.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ10520 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10520, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10520 BINDING SITE, designated SEQ ID:4272, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33289] Another function of GAM281 is therefore inhibition of FLJ10520 (Accession NP_060594.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10520.

[33290] FLJ10535 (Accession NP_060599.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10535

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10535, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10535 BINDING SITE, designated SEQ ID:9543, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33291] Another function of GAM281 is therefore inhibition of FLJ10535 (Accession NP_060599.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10535.

[33292] FLJ10560 (Accession NP_060608.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10560 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10560, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10560 BINDING SITE, designated SEQ ID:15591, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33293] Another function of GAM281 is therefore inhibition of FLJ10560 (Accession NP_060608.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10560.

[33294] FLJ10569 (Accession NP_060612.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10569 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10569, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10569 BINDING SITE, designated SEQ ID:11899, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33295] Another function of GAM281 is therefore inhibition of FLJ10569 (Accession NP_060612.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10569.

[33296] FLJ10640 (Accession NP_061896.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10640 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by FLJ10640, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10640 BINDING SITE, designated SEQ ID:18109, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33297] Another function of GAM281 is therefore inhibition of FLJ10640 (Accession NP_061896.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10640.

[33298] FLJ10713 (Accession NP_060659.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10713 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10713 BINDING SITE, designated SEQ ID:7909, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33299] Another function of GAM281 is therefore inhibition of

FLJ10713 (Accession NP_060659.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10713.

[33300] FLJ10769 (Accession NP_060680.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10769 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10769, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10769 BINDING SITE, designated SEQ ID:12257, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33301] Another function of GAM281 is therefore inhibition of FLJ10769 (Accession NP_060680.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10769.

[33302] FLJ10846 (Accession NP_060711.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10846 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10846, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10846 BINDING SITE, designated SEQ ID:11528, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33303] Another function of GAM281 is therefore inhibition of FLJ10846 (Accession NP_060711.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10846.

[33304] FLJ10847 (Accession NP_060712.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ10847 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10847, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10847 BINDING SITE, designated SEQ ID:19357, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33305] Another function of GAM281 is therefore inhibition of FLJ10847 (Accession NP_060712.2) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10847.

[33306] FLJ10898 (Accession NP_060733.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10898 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10898, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10898 BINDING SITE, designated SEQ ID:7243, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33307] Another function of GAM281 is therefore inhibition of FLJ10898 (Accession NP_060733.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10898.

[33308] FLJ10922 (Accession NP_060743.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10922 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10922, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10922 BINDING SITE, designated SEQ ID:18818, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33309] Another function of GAM281 is therefore inhibition of FLJ10922 (Accession NP_060743.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10922.

[33310] FLJ10932 (Accession NP_060747.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ10932 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10932, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10932 BINDING SITE, designated SEQ ID:4934, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33311] Another function of GAM281 is therefore inhibition of FLJ10932 (Accession NP_060747.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ10932.

[33312] FLJ10936 (Accession NP_060749.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ10936 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10936, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10936 BINDING SITE, designated SEQ ID:7238, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33313] Another function of GAM281 is therefore inhibition of FLJ10936 (Accession NP_060749.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10936.

[33314] FLJ11029 (Accession NP_060774.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ11029 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11029, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ11029 BINDING SITE, designated SEQ ID:3089, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33315] Another function of GAM281 is therefore inhibition of FLJ11029 (Accession NP_060774.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11029.

[33316] FLJ11323 (Accession NP_060860.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ11323 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ11323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11323 BINDING SITE, designated SEQ ID:2044, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33317] Another function of GAM281 is therefore inhibition of FLJ11323 (Accession NP_060860.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ11323.

[33318] FLJ11467 (Accession NP_079239.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ11467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11467 BINDING SITE, designated SEQ ID:834, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33319] Another function of GAM281 is therefore inhibition of FLJ11467 (Accession NP_079239.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11467.

[33320] FLJ11710 (Accession NP_079122.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ11710 BINDING SITE1 and FLJ11710 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ11710, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FLJ11710 BINDING SITE1 and FLJ11710 BINDING SITE2, designated SEQ ID:9688 and SEQ ID:2245 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33321] Another function of GAM281 is therefore inhibition of FLJ11710 (Accession NP_079122.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11710.

[33322] FLJ11715 (Accession NP_078840.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ11715 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11715, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11715 BINDING SITE, designated SEQ ID:3305, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33323] Another function of GAM281 is therefore inhibition of FLJ11715 (Accession NP_078840.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ11715.

[33324] FLJ11800 (Accession NP_079250.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ11800 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11800 BINDING SITE, designated SEQ ID:10847, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33325] Another function of GAM281 is therefore inhibition of FLJ11800 (Accession NP_079250.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11800.

[33326] FLJ12076 (Accession NP_079463.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ12076 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12076, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ12076 BINDING SITE, designated SEQ ID:8886, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33327] Another function of GAM281 is therefore inhibition of FLJ12076 (Accession NP_079463.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12076.

[33328] FLJ12363 (Accession NP_115543.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12363 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12363, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12363 BINDING SITE, designated SEQ ID:17722, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33329] Another function of GAM281 is therefore inhibition of FLJ12363 (Accession NP_115543.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ12363.

[33330] FLJ12448 (Accession NP_075046.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12448 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12448, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12448 BINDING SITE, designated SEQ ID:8405, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33331] Another function of GAM281 is therefore inhibition of FLJ12448 (Accession NP_075046.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12448.

[33332] FLJ12572 (Accession NP_075056.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ12572 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ12572, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ12572 BINDING SITE, designated SEQ ID:17515, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33333] Another function of GAM281 is therefore inhibition of FLJ12572 (Accession NP_075056.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12572.

[33334] FLJ12586 (Accession NP_078896.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ12586 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ12586, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12586 BINDING SITE, designated SEQ ID:10410, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33335] Another function of GAM281 is therefore inhibition of FLJ12586 (Accession NP_078896.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12586.

[33336] FLJ12649 (Accession XP_291344.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12649 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12649, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12649 BINDING SITE, designated SEQ ID:3686, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33337] Another function of GAM281 is therefore inhibition of FLJ12649 (Accession XP_291344.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12649.

[33338] FLJ12687 (Accession NP_079193.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ12687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12687 BINDING SITE, designated SEQ ID:3324, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33339] Another function of GAM281 is therefore inhibition of FLJ12687 (Accession NP_079193.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12687.

[33340] FLJ12747 (Accession XP_290972.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12747 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12747 BINDING SITE, designated SEQ ID:10683, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33341] Another function of GAM281 is therefore inhibition of FLJ12747 (Accession XP_290972.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12747.

[33342] FLJ12787 (Accession NP_115551.1) is another GAM281

target gene, herein designated TARGET GENE. FLJ12787 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12787, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12787 BINDING SITE, designated SEQ ID:14839, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33343] Another function of GAM281 is therefore inhibition of FLJ12787 (Accession NP_115551.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12787.

[33344] FLJ12800 (Accession NP_075054.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12800 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12800 BINDING SITE, designated SEQ ID:4261, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33345] Another function of GAM281 is therefore inhibition of FLJ12800 (Accession NP_075054.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12800.

[33346] FLJ12888 (Accession NP_079221.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12888 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12888, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12888 BINDING SITE, designated SEQ ID:17723, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33347] Another function of GAM281 is therefore inhibition of FLJ12888 (Accession NP_079221.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12888.

[33348] FLJ12903 (Accession NP_073590.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12903

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12903, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12903 BINDING SITE, designated SEQ ID:10224, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33349] Another function of GAM281 is therefore inhibition of FLJ12903 (Accession NP_073590.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12903.

[33350] FLJ12960 (Accession NP_078914.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12960 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12960, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12960 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33351] Another function of GAM281 is therefore inhibition of FLJ12960 (Accession NP_078914.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12960.

[33352] FLJ12973 (Accession NP_079184.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12973 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12973, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12973 BINDING SITE, designated SEQ ID:5230, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33353] Another function of GAM281 is therefore inhibition of FLJ12973 (Accession NP_079184.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12973.

[33354] FLJ12975 (Accession NP_079085.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ12975 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ12975, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12975 BINDING SITE, designated SEQ ID:2409, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33355] Another function of GAM281 is therefore inhibition of FLJ12975 (Accession NP_079085.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12975.

[33356] FLJ12986 (Accession XP_290685.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ12986 BINDING SITE1 and FLJ12986 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ12986, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12986 BINDING SITE1 and FLJ12986 BINDING SITE2, designated SEQ ID:6037 and SEQ ID:11396 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[33357] Another function of GAM281 is therefore inhibition of FLJ12986 (Accession XP_290685.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12986.

[33358] FLJ13072 (Accession XP_117117.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ13072 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13072, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13072 BINDING SITE, designated SEQ ID:2223, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33359] Another function of GAM281 is therefore inhibition of FLJ13072 (Accession XP_117117.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13072.

[33360] FLJ13114 (Accession NP_078817.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ13114

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13114 BINDING SITE, designated SEQ ID:11919, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33361] Another function of GAM281 is therefore inhibition of FLJ13114 (Accession NP_078817.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13114.

[33362] FLJ13189 (Accession NP_079158.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ13189 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13189, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13189 BINDING SITE, designated SEQ ID:4530, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33363] Another function of GAM281 is therefore inhibition of FLJ13189 (Accession NP_079158.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13189.

[33364] FLJ13197 (Accession NP_078890.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ13197 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13197 BINDING SITE, designated SEQ ID:8231, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33365] Another function of GAM281 is therefore inhibition of FLJ13197 (Accession NP_078890.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13197.

[33366] FLJ13441 (Accession NP_076413.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ13441 BINDING SITE1 and FLJ13441 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by FLJ13441, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13441 BINDING SITE1 and FLJ13441 BINDING SITE2, designated SEQ ID:3478 and SEQ ID:12452 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33367] Another function of GAM281 is therefore inhibition of FLJ13441 (Accession NP_076413.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13441.

[33368] FLJ13456 (Accession XP_038291.5) is another GAM281 target gene, herein designated TARGET GENE. FLJ13456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13456 BINDING SITE, designated SEQ ID:8163, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33369] Another function of GAM281 is therefore inhibition of FLJ13456 (Accession XP_038291.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13456.

[33370] FLJ13590 (Accession NP_079116.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ13590 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13590, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13590 BINDING SITE, designated SEQ ID:7813, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33371] Another function of GAM281 is therefore inhibition of FLJ13590 (Accession NP_079116.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13590.

[33372] FLJ13744 (Accession NP_079287.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ13744

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13744, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13744 BINDING SITE, designated SEQ ID:6185, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33373] Another function of GAM281 is therefore inhibition of FLJ13744 (Accession NP_079287.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13744.

[33374] FLJ13910 (Accession NP_073617.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ13910 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13910, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13910 BINDING SITE, designated SEQ ID:7691, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33375] Another function of GAM281 is therefore inhibition of FLJ13910 (Accession NP_073617.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13910.

[33376] FLJ13984 (Accession NP_079046.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ13984 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13984, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13984 BINDING SITE, designated SEQ ID:10809, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33377] Another function of GAM281 is therefore inhibition of FLJ13984 (Accession NP_079046.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13984.

[33378] FLJ14100 (Accession NP_079301.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ14100 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ14100, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14100 BINDING SITE, designated SEQ ID:12143, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33379] Another function of GAM281 is therefore inhibition of FLJ14100 (Accession NP_079301.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14100.

[33380] FLJ14351 (Accession NP_079008.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ14351 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14351, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14351 BINDING SITE, designated SEQ ID:8586, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33381] Another function of GAM281 is therefore inhibition of

FLJ14351 (Accession NP_079008.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14351.

[33382] FLJ14442 (Accession NP_116174.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ14442 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14442 BINDING SITE, designated SEQ ID:16259, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33383] Another function of GAM281 is therefore inhibition of FLJ14442 (Accession NP_116174.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14442.

[33384] FLJ14675 (Accession NP_116212.3) is another GAM281 target gene, herein designated TARGET GENE. FLJ14675 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14675, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14675 BINDING SITE, designated SEQ ID:16071, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33385] Another function of GAM281 is therefore inhibition of FLJ14675 (Accession NP_116212.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14675.

[33386] FLJ14803 (Accession NP_116231.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ14803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14803 BINDING SITE, designated SEQ ID:939, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33387] Another function of GAM281 is therefore inhibition of FLJ14803 (Accession NP_116231.1) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14803.

[33388] FLJ14957 (Accession NP_116255.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ14957 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14957, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14957 BINDING SITE, designated SEQ ID:13527, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33389] Another function of GAM281 is therefore inhibition of FLJ14957 (Accession NP_116255.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14957.

[33390] FLJ20045 (Accession NP_060108.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20045 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20045, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20045 BINDING SITE, designated SEQ ID:12557, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33391] Another function of GAM281 is therefore inhibition of FLJ20045 (Accession NP_060108.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20045.

[33392] FLJ20079 (Accession NP_060126.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20079 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20079, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20079 BINDING SITE, designated SEQ ID:14265, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33393] Another function of GAM281 is therefore inhibition of FLJ20079 (Accession NP_060126.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20079.

[33394] FLJ20095 (Accession NP_060136.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20095 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20095, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20095 BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33395] Another function of GAM281 is therefore inhibition of FLJ20095 (Accession NP_060136.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20095.

[33396] FLJ20123 (Accession NP_060144.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20123 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20123 BINDING SITE, designated SEQ ID:17513, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33397] Another function of GAM281 is therefore inhibition of FLJ20123 (Accession NP_060144.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20123.

[33398] FLJ20136 (Accession NP_060154.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20136 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20136 BINDING SITE, designated SEQ ID:4536, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33399] Another function of GAM281 is therefore inhibition of FLJ20136 (Accession NP_060154.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20136.

[33400] FLJ20147 (Accession NP_060157.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20147 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20147, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20147 BINDING SITE, designated SEQ ID:2624, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33401] Another function of GAM281 is therefore inhibition of FLJ20147 (Accession NP_060157.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20147.

[33402] FLJ20207 (Accession NP_060181.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ20207 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20207, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ20207 BINDING SITE, designated SEQ ID:14870, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33403] Another function of GAM281 is therefore inhibition of FLJ20207 (Accession NP_060181.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20207.

[33404] FLJ20245 (Accession NP_060193.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20245 BINDING SITE1 and FLJ20245 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20245, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20245 BINDING SITE1 and FLJ20245 BINDING SITE2, designated SEQ ID:5275 and SEQ ID:8581 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33405] Another function of GAM281 is therefore inhibition of FLJ20245 (Accession NP_060193.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20245.

[33406] FLJ20257 (Accession NP_062552.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20257 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20257, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20257 BINDING SITE, designated SEQ ID:7206, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33407] Another function of GAM281 is therefore inhibition of FLJ20257 (Accession NP_062552.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20257.

[33408] FLJ20308 (Accession NP_060228.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20308 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20308, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20308 BINDING SITE, designated SEQ ID:5413, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33409] Another function of GAM281 is therefore inhibition of FLJ20308 (Accession NP_060228.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20308.

[33410] FLJ20320 (Accession NP_060235.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20320 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20320 BINDING SITE, designated SEQ ID:16994, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33411] Another function of GAM281 is therefore inhibition of FLJ20320 (Accession NP_060235.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20320.

[33412] FLJ20344 (Accession NP_060246.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20344 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20344, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20344 BINDING SITE, designated SEQ ID:4079, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33413] Another function of GAM281 is therefore inhibition of FLJ20344 (Accession NP_060246.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20344.

[33414] FLJ20359 (Accession NP_060251.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20359 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20359, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ20359 BINDING SITE, designated SEQ ID:11024, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33415] Another function of GAM281 is therefore inhibition of FLJ20359 (Accession NP_060251.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20359.

[33416] FLJ20375 (Accession NP_060264.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ20375 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20375, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20375 BINDING SITE, designated SEQ ID:9357, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33417] Another function of GAM281 is therefore inhibition of FLJ20375 (Accession NP_060264.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20375.

[33418] FLJ20507 (Accession NP_060319.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20507 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20507, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20507 BINDING SITE, designated SEQ ID:3211, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33419] Another function of GAM281 is therefore inhibition of FLJ20507 (Accession NP_060319.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20507.

[33420] FLJ20511 (Accession NP_060323.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20511 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20511, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20511 BINDING SITE, designated SEQ ID:17759, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33421] Another function of GAM281 is therefore inhibition of FLJ20511 (Accession NP_060323.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20511.

[33422] FLJ20671 (Accession NP_060394.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20671 BINDING SITE1 and FLJ20671 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20671, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20671 BINDING SITE1 and FLJ20671 BINDING SITE2, designated SEQ ID:16491 and SEQ ID:13041 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33423] Another function of GAM281 is therefore inhibition of FLJ20671 (Accession NP_060394.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20671.

[33424] FLJ20700 (Accession NP_060402.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20700 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20700, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20700 BINDING SITE, designated SEQ ID:18943, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33425] Another function of GAM281 is therefore inhibition of FLJ20700 (Accession NP_060402.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20700.

[33426] FLJ20813 (Accession NP_060431.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20813 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ20813 BINDING SITE, designated SEQ ID:10574, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33427] Another function of GAM281 is therefore inhibition of FLJ20813 (Accession NP_060431.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20813.

[33428] FLJ20825 (Accession NP_060432.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20825 BINDING SITE1 and FLJ20825 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20825, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20825 BINDING SITE1 and FLJ20825 BINDING SITE2, designated SEQ ID:3016 and SEQ ID:19008 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33429] Another function of GAM281 is therefore inhibition of FLJ20825 (Accession NP_060432.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20825.

[33430] FLJ20886 (Accession NP_079475.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ20886 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20886, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20886 BINDING SITE, designated SEQ ID:5155, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33431] Another function of GAM281 is therefore inhibition of FLJ20886 (Accession NP_079475.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20886.

[33432] FLJ21128 (Accession NP_079359.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ21128 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ21128 BINDING SITE, designated SEQ ID:17516, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33433] Another function of GAM281 is therefore inhibition of FLJ21128 (Accession NP_079359.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21128.

[33434] FLJ21603 (Accession NP_079038.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ21603 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21603 BINDING SITE, designated SEQ ID:15047, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33435] Another function of GAM281 is therefore inhibition of FLJ21603 (Accession NP_079038.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ21603.

[33436] FLJ21673 (Accession NP_112160.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ21673 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ21673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21673 BINDING SITE, designated SEQ ID:1435, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33437] Another function of GAM281 is therefore inhibition of FLJ21673 (Accession NP_112160.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21673.

[33438] FLJ21777 (Accession NP_115585.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ21777 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21777, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ21777 BINDING SITE, designated SEQ ID:4203, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33439] Another function of GAM281 is therefore inhibition of FLJ21777 (Accession NP_115585.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21777.

[33440] FLJ21865 (Accession NP_073596.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ21865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21865 BINDING SITE, designated SEQ ID:13223, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33441] Another function of GAM281 is therefore inhibition of FLJ21865 (Accession NP_073596.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21865.

[33442] FLJ22029 (Accession NP_079225.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ22029 BINDING SITE1 through FLJ22029 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ22029, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22029 BINDING SITE1 through FLJ22029 BINDING SITE3, designated SEQ ID:5439, SEQ ID:19447 and SEQ ID:1727 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33443] Another function of GAM281 is therefore inhibition of FLJ22029 (Accession NP_079225.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22029.

[33444] FLJ22167 (Accession NP_078809.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ22167 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ22167 BINDING SITE, designated SEQ ID:15971, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33445] Another function of GAM281 is therefore inhibition of FLJ22167 (Accession NP_078809.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22167.

[33446] FLJ22329 (Accession NP_078932.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ22329 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22329 BINDING SITE, designated SEQ ID:9543, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33447] Another function of GAM281 is therefore inhibition of FLJ22329 (Accession NP_078932.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ22329.

[33448] FLJ22531 (Accession NP_078926.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ22531 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22531 BINDING SITE, designated SEQ ID:5636, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33449] Another function of GAM281 is therefore inhibition of FLJ22531 (Accession NP_078926.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22531.

[33450] FLJ22693 (Accession NP_073587.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ22693 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ22693 BINDING SITE, designated SEQ ID:4200, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33451] Another function of GAM281 is therefore inhibition of FLJ22693 (Accession NP_073587.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22693.

[33452] FLJ22794 (Accession NP_071357.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ22794 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22794, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22794 BINDING SITE, designated SEQ ID:5559, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33453] Another function of GAM281 is therefore inhibition of FLJ22794 (Accession NP_071357.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22794.

[33454] FLJ22955 (Accession NP_079095.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ22955 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22955, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22955 BINDING SITE, designated SEQ ID:19507, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33455] Another function of GAM281 is therefore inhibition of FLJ22955 (Accession NP_079095.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22955.

[33456] FLJ22965 (Accession NP_071384.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ22965 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22965, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22965 BINDING SITE, designated SEQ ID:2808, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33457] Another function of GAM281 is therefore inhibition of FLJ22965 (Accession NP_071384.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22965.

[33458] FLJ23024 (Accession NP_079212.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23024 BINDING SITE, designated SEQ ID:9682, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33459] Another function of GAM281 is therefore inhibition of FLJ23024 (Accession NP_079212.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23024.

[33460] FLJ23040 (Accession NP_079450.1) is another GAM281

target gene, herein designated TARGET GENE. FLJ23040 BINDING SITE1 and FLJ23040 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ23040, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23040 BINDING SITE1 and FLJ23040 BINDING SITE2, designated SEQ ID:18256 and SEQ ID:14760 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33461] Another function of GAM281 is therefore inhibition of FLJ23040 (Accession NP_079450.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23040.

[33462] FLJ23053 (Accession NP_075058.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23053 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ23053 BINDING SITE, designated SEQ ID:8693, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33463] Another function of GAM281 is therefore inhibition of FLJ23053 (Accession NP_075058.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23053.

[33464] FLJ23186 (Accession NP_078892.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23186 BINDING SITE, designated SEQ ID:1340, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33465] Another function of GAM281 is therefore inhibition of FLJ23186 (Accession NP_078892.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23186.

[33466] FLJ23263 (Accession NP_079391.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23263 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ23263, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23263 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33467] Another function of GAM281 is therefore inhibition of FLJ23263 (Accession NP_079391.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23263.

[33468] FLJ23356 (Accession NP_115613.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23356 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23356 BINDING SITE, designated SEQ ID:12273, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33469] Another function of GAM281 is therefore inhibition of FLJ23356 (Accession NP_115613.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23356.

[33470] FLJ23392 (Accession NP_079060.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23392 BINDING SITE1 through FLJ23392 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ23392, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23392 BINDING SITE1 through FLJ23392 BINDING SITE3, designated SEQ ID:20052, SEQ ID:9148 and SEQ ID:5554 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33471] Another function of GAM281 is therefore inhibition of FLJ23392 (Accession NP_079060.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ23392.

[33472] FLJ23416 (Accession NP_115614.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23416 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23416, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23416 BINDING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33473] Another function of GAM281 is therefore inhibition of FLJ23416 (Accession NP_115614.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23416.

[33474] FLJ23556 (Accession NP_079156.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ23556 BINDING SITE1 and FLJ23556 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ23556, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FLJ23556 BINDING SITE1 and FLJ23556 BINDING SITE2, designated SEQ ID:17969 and SEQ ID:11323 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33475] Another function of GAM281 is therefore inhibition of FLJ23556 (Accession NP_079156.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23556.

[33476] FLJ23563 (Accession XP_041701.4) is another GAM281 target gene, herein designated TARGET GENE. FLJ23563 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23563 BINDING SITE, designated SEQ ID:15048, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33477] Another function of GAM281 is therefore inhibition of FLJ23563 (Accession XP_041701.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ23563.

[33478] FLJ25416 (Accession NP_659455.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ25416 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ25416, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25416 BINDING SITE, designated SEQ ID:16915, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33479] Another function of GAM281 is therefore inhibition of FLJ25416 (Accession NP_659455.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25416.

[33480] FLJ25421 (Accession NP_689725.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ25421 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ25421, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ25421 BINDING SITE, designated SEQ ID:12127, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33481] Another function of GAM281 is therefore inhibition of FLJ25421 (Accession NP_689725.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25421.

[33482] FLJ25795 (Accession NP_689633.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ25795 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25795, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25795 BINDING SITE, designated SEQ ID:934, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33483] Another function of GAM281 is therefore inhibition of FLJ25795 (Accession NP_689633.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ25795.

[33484] FLJ30507 (Accession NP_694555.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ30507 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ30507, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30507 BINDING SITE, designated SEQ ID:17957, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33485] Another function of GAM281 is therefore inhibition of FLJ30507 (Accession NP_694555.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30507.

[33486] FLJ30532 (Accession NP_653325.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ30532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ30532 BINDING SITE, designated SEQ ID:19834, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33487] Another function of GAM281 is therefore inhibition of FLJ30532 (Accession NP_653325.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30532.

[33488] FLJ31139 (Accession NP_775928.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31139 BINDING SITE1 through FLJ31139 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ31139, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31139 BINDING SITE1 through FLJ31139 BINDING SITE3, designated SEQ ID:15200, SEQ ID:18868 and SEQ ID:3952 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33489] Another function of GAM281 is therefore inhibition of FLJ31139 (Accession NP_775928.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ31139.

[33490] FLJ31153 (Accession NP_653201.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31153 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31153, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31153 BINDING SITE, designated SEQ ID:7373, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33491] Another function of GAM281 is therefore inhibition of FLJ31153 (Accession NP_653201.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31153.

[33492] FLJ31166 (Accession NP_694567.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ31166 BINDING SITE, designated SEQ ID:19301, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33493] Another function of GAM281 is therefore inhibition of FLJ31166 (Accession NP_694567.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31166.

[33494] FLJ31322 (Accession NP_689600.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31322 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31322 BINDING SITE, designated SEQ ID:17683, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33495] Another function of GAM281 is therefore inhibition of FLJ31322 (Accession NP_689600.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ31322.

[33496] FLJ31338 (Accession NP_689682.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31338 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31338, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31338 BINDING SITE, designated SEQ ID:1672, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33497] Another function of GAM281 is therefore inhibition of FLJ31338 (Accession NP_689682.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31338.

[33498] FLJ31384 (Accession NP_689685.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31384 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31384, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ31384 BINDING SITE, designated SEQ ID:14326, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33499] Another function of GAM281 is therefore inhibition of FLJ31384 (Accession NP_689685.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31384.

[33500] FLJ31393 (Accession NP_694569.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31393 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ31393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31393 BINDING SITE, designated SEQ ID:9670, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33501] Another function of GAM281 is therefore inhibition of FLJ31393 (Accession NP_694569.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31393.

[33502] FLJ31401 (Accession NP_689877.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31401 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31401, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31401 BINDING SITE, designated SEQ ID:16543, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33503] Another function of GAM281 is therefore inhibition of FLJ31401 (Accession NP_689877.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31401.

[33504] FLJ31434 (Accession NP_689709.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ31434 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31434, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31434 BINDING SITE, designated SEQ ID:9290, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33505] Another function of GAM281 is therefore inhibition of FLJ31434 (Accession NP_689709.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31434.

[33506] FLJ32096 (Accession NP_776156.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32096 BINDING SITE1 and FLJ32096 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ32096, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32096 BINDING SITE1 and FLJ32096 BINDING SITE2, designated SEQ ID:1025 and SEQ ID:16043 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33507] Another function of GAM281 is therefore inhibition of FLJ32096 (Accession NP_776156.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ32096.

[33508] FLJ32130 (Accession NP_689671.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ32130 BINDING SITE1 through FLJ32130 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ32130, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32130 BINDING SITE1 through FLJ32130 BINDING SITE3, designated SEQ ID:4630, SEQ ID:15049 and SEQ ID:2061 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33509] Another function of GAM281 is therefore inhibition of FLJ32130 (Accession NP_689671.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32130.

[33510] FLJ32206 (Accession NP_689710.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32206 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32206, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32206 BINDING SITE, designated SEQ ID:3860, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33511] Another function of GAM281 is therefore inhibition of FLJ32206 (Accession NP_689710.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32206.

[33512] FLJ32332 (Accession NP_653242.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32332 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32332, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32332 BINDING SITE, designated SEQ ID:12917, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33513] Another function of GAM281 is therefore inhibition of FLJ32332 (Accession NP_653242.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ32332.

[33514] FLJ32334 (Accession NP_653166.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32334 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32334 BINDING SITE, designated SEQ ID:8493, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33515] Another function of GAM281 is therefore inhibition of FLJ32334 (Accession NP_653166.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32334.

[33516] FLJ32499 (Accession NP_653208.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32499 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ32499 BINDING SITE, designated SEQ ID:4681, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33517] Another function of GAM281 is therefore inhibition of FLJ32499 (Accession NP_653208.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32499.

[33518] FLJ32731 (Accession NP_689632.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32731 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32731 BINDING SITE, designated SEQ ID:16099, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33519] Another function of GAM281 is therefore inhibition of FLJ32731 (Accession NP_689632.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ32731.

[33520] FLJ32803 (Accession NP_694584.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32803 BINDING SITE, designated SEQ ID:1856, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33521] Another function of GAM281 is therefore inhibition of FLJ32803 (Accession NP_694584.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32803.

[33522] FLJ32865 (Accession NP_653214.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ32865 BINDING SITE, designated SEQ ID:2146, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33523] Another function of GAM281 is therefore inhibition of FLJ32865 (Accession NP_653214.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32865.

[33524] FLJ32894 (Accession NP_653268.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32894 BINDING SITE, designated SEQ ID:7467, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33525] Another function of GAM281 is therefore inhibition of FLJ32894 (Accession NP_653268.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32894.

[33526] FLJ32932 (Accession NP_690873.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ32932 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32932, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32932 BINDING SITE, designated SEQ ID:9555, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33527] Another function of GAM281 is therefore inhibition of FLJ32932 (Accession NP_690873.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32932.

[33528] FLJ33505 (Accession NP_689530.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ33505 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33505, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33505 BINDING SITE, designated SEQ ID:13693, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33529] Another function of GAM281 is therefore inhibition of FLJ33505 (Accession NP_689530.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33505.

[33530] FLJ33655 (Accession NP_775912.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ33655 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33655, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33655 BINDING SITE, designated SEQ ID:16113, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33531] Another function of GAM281 is therefore inhibition of FLJ33655 (Accession NP_775912.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33655.

[33532] FLJ34817 (Accession NP_689516.1) is another GAM281

target gene, herein designated TARGET GENE. FLJ34817 BINDING SITE1 and FLJ34817 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ34817, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34817 BINDING SITE1 and FLJ34817 BINDING SITE2, designated SEQ ID:7075 and SEQ ID:4004 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33533] Another function of GAM281 is therefore inhibition of FLJ34817 (Accession NP_689516.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34817.

[33534] FLJ34922 (Accession NP_689483.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ34922 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ34922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ34922 BINDING SITE, designated SEQ ID:18132, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33535] Another function of GAM281 is therefore inhibition of FLJ34922 (Accession NP_689483.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34922.

[33536] FLJ34969 (Accession XP_114353.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ34969 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ34969, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34969 BINDING SITE, designated SEQ ID:581, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33537] Another function of GAM281 is therefore inhibition of FLJ34969 (Accession XP_114353.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34969.

[33538] FLJ35105 (Accession NP_689890.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ35105 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ35105, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35105 BINDING SITE, designated SEQ ID:18938, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33539] Another function of GAM281 is therefore inhibition of FLJ35105 (Accession NP_689890.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35105.

[33540] FLJ35487 (Accession NP_776181.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ35487 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35487, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35487 BINDING SITE, designated SEQ ID:12556, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33541] Another function of GAM281 is therefore inhibition of FLJ35487 (Accession NP_776181.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35487.

[33542] FLJ35681 (Accession NP_787096.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ35681 BINDING SITE1 and FLJ35681 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ35681, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35681 BINDING SITE1 and FLJ35681 BINDING SITE2, designated SEQ ID:1653 and SEQ ID:11521 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33543] Another function of GAM281 is therefore inhibition of FLJ35681 (Accession NP_787096.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ35681.

[33544] FLJ35848 (Accession XP_290755.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ35848 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35848, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35848 BINDING SITE, designated SEQ ID:14986, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33545] Another function of GAM281 is therefore inhibition of FLJ35848 (Accession XP_290755.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35848.

[33546] FLJ36112 (Accession NP_775950.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ36112 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36112, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ36112 BINDING SITE, designated SEQ ID:6601, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33547] Another function of GAM281 is therefore inhibition of FLJ36112 (Accession NP_775950.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36112.

[33548] FLJ36445 (Accession NP_694965.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ36445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36445 BINDING SITE, designated SEQ ID:2147, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33549] Another function of GAM281 is therefore inhibition of FLJ36445 (Accession NP_694965.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36445.

[33550] FLJ37045 (Accession NP_787085.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ37045 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37045 BINDING SITE, designated SEQ ID:9497, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33551] Another function of GAM281 is therefore inhibition of FLJ37045 (Accession NP_787085.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37045.

[33552] FLJ37078 (Accession NP_694588.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ37078 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ37078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37078 BINDING SITE, designated SEQ ID:11528, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33553] Another function of GAM281 is therefore inhibition of FLJ37078 (Accession NP_694588.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37078.

[33554] FLJ37266 (Accession NP_787088.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ37266 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37266 BINDING SITE, designated SEQ ID:4602, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33555] Another function of GAM281 is therefore inhibition of FLJ37266 (Accession NP_787088.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37266.

[33556] FLJ37433 (Accession NP_848612.1) is another GAM281

target gene, herein designated TARGET GENE. FLJ37433 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37433, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37433 BINDING SITE, designated SEQ ID:8582, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33557] Another function of GAM281 is therefore inhibition of FLJ37433 (Accession NP_848612.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37433.

[33558] FLJ37543 (Accession NP_775938.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ37543 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37543, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37543 BINDING SITE, designated SEQ ID:5495, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33559] Another function of GAM281 is therefore inhibition of FLJ37543 (Accession NP_775938.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37543.

[33560] FLJ38101 (Accession NP_694993.2) is another GAM281 target gene, herein designated TARGET GENE. FLJ38101 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38101 BINDING SITE, designated SEQ ID:5589, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33561] Another function of GAM281 is therefore inhibition of FLJ38101 (Accession NP_694993.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38101.

[33562] FLJ38149 (Accession XP_091919.5) is another GAM281 target gene, herein designated TARGET GENE. FLJ38149

BINDING SITE1 through FLJ38149 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ38149, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38149 BINDING SITE1 through FLJ38149 BINDING SITE3, designated SEQ ID:15044, SEQ ID:18971 and SEQ ID:9373 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33563] Another function of GAM281 is therefore inhibition of FLJ38149 (Accession XP_091919.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38149.

[33564] FLJ38281 (Accession NP_689814.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ38281 BINDING SITE1 and FLJ38281 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38281, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38281 BINDING SITE1 and

FLJ38281 BINDING SITE2, designated SEQ ID:9492 and SEQ ID:6885 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33565] Another function of GAM281 is therefore inhibition of FLJ38281 (Accession NP_689814.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38281.

[33566] FLJ38607 (Accession NP_689867.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ38607 BINDING SITE1 and FLJ38607 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38607, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38607 BINDING SITE1 and FLJ38607 BINDING SITE2, designated SEQ ID:16688 and SEQ ID:7382 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33567] Another function of GAM281 is therefore inhibition of FLJ38607 (Accession NP_689867.1) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38607.

[33568] FLJ38792 (Accession NP_848615.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ38792 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38792, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38792 BINDING SITE, designated SEQ ID:14861, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33569] Another function of GAM281 is therefore inhibition of FLJ38792 (Accession NP_848615.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38792.

[33570] FLJ38819 (Accession NP_665872.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ38819 BINDING SITE1 and FLJ38819 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38819, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38819 BINDING SITE1 and FLJ38819 BINDING SITE2, designated SEQ ID:18642 and SEQ ID:9791 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33571] Another function of GAM281 is therefore inhibition of FLJ38819 (Accession NP_665872.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38819.

[33572] FLJ38991 (Accession NP_776188.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ38991 BINDING SITE1 and FLJ38991 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38991, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38991 BINDING SITE1 and FLJ38991 BINDING SITE2, designated SEQ ID:14236 and SEQ ID:10356 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[33573] Another function of GAM281 is therefore inhibition of FLJ38991 (Accession NP_776188.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38991.

[33574] FLJ39415 (Accession NP_775952.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ39415 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39415, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39415 BINDING SITE, designated SEQ ID:11673, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33575] Another function of GAM281 is therefore inhibition of FLJ39415 (Accession NP_775952.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39415.

[33576] FLJ39441 (Accession XP_084736.6) is another GAM281 target gene, herein designated TARGET GENE. FLJ39441

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39441 BINDING SITE, designated SEQ ID:7388, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33577] Another function of GAM281 is therefore inhibition of FLJ39441 (Accession XP_084736.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39441.

[33578] FLJ39599 (Accession NP_776164.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ39599 BINDING SITE1 through FLJ39599 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ39599, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39599 BINDING SITE1 through FLJ39599 BINDING SITE3, designated SEQ ID:8232, SEQ ID:16001 and SEQ ID:2845 respectively, to the nucleotide

sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33579] Another function of GAM281 is therefore inhibition of FLJ39599 (Accession NP_776164.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39599.

[33580] FLJ39639 (Accession XP_290687.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ39639 BINDING SITE1 and FLJ39639 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ39639, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39639 BINDING SITE1 and FLJ39639 BINDING SITE2, designated SEQ ID:6883 and SEQ ID:9190 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33581] Another function of GAM281 is therefore inhibition of FLJ39639 (Accession XP_290687.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ39639.

[33582] FLJ39821 (Accession NP_775971.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ39821 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39821, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39821 BINDING SITE, designated SEQ ID:17406, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33583] Another function of GAM281 is therefore inhibition of FLJ39821 (Accession NP_775971.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39821.

[33584] FLJ90231 (Accession NP_775852.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ90231 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ90231 BINDING SITE, designated SEQ ID:10357, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33585] Another function of GAM281 is therefore inhibition of FLJ90231 (Accession NP_775852.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90231.

[33586] FLJ90586 (Accession NP_699176.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ90586 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90586, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90586 BINDING SITE, designated SEQ ID:2786, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33587] Another function of GAM281 is therefore inhibition of FLJ90586 (Accession NP_699176.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90586.

[33588] FLJ90723 (Accession NP_787115.1) is another GAM281 target gene, herein designated TARGET GENE. FLJ90723 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90723, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90723 BINDING SITE, designated SEQ ID:19889, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33589] Another function of GAM281 is therefore inhibition of FLJ90723 (Accession NP_787115.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90723.

[33590] Formin binding protein 1 (FNBP1, Accession XP_052666.3) is another GAM281 target gene, herein designated TARGET GENE. FNBP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FNBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FNBP1 BINDING SITE, designated

SEQ ID:16354, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33591] Another function of GAM281 is therefore inhibition of Formin binding protein 1 (FNBP1, Accession XP_052666.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FNBP1.

[33592] Forkhead box e2 (FOXE2, Accession NP_036317.1) is another GAM281 target gene, herein designated TARGET GENE. FOXE2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FOXE2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXE2 BINDING SITE, designated SEQ ID:15626, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33593] Another function of GAM281 is therefore inhibition of Forkhead box e2 (FOXE2, Accession NP_036317.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXE2.

[33594] Forkhead box o1a (rhabdomyosarcoma) (FOXO1A, Accession NP_002006.2) is another GAM281 target gene, herein designated TARGET GENE. FOXO1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOXO1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXO1A BINDING SITE, designated SEQ ID:736, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33595] Another function of GAM281 is therefore inhibition of Forkhead box o1a (rhabdomyosarcoma) (FOXO1A, Accession NP_002006.2), a gene which is a probable transcription factor. and therefore may be associated with Alveolar rhabdomyosarcoma- 2. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Alveolar rhabdomyosarcoma- 2., and of other diseases and clinical conditions associated with FOXO1A.

[33596] The function of FOXO1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Fsh primary response (lrpr1 homolog, rat) 1

(FSHPRH1, Accession NP_006724.1) is another GAM281 target gene, herein designated TARGET GENE. FSHPRH1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FSHPRH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FSHPRH1 BINDING SITE, designated SEQ ID:11528, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33597] Another function of GAM281 is therefore inhibition of Fsh primary response (lrpr1 homolog, rat) 1 (FSHPRH1, Accession NP_006724.1), a gene which is involved in the response of gonadal tissues to follicle- stimulating hormone. and therefore may be associated with Hypergonadotropic ovarian dysgenesis (odg), x- linked disorders of gonadal development. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Hypergonadotropic ovarian dysgenesis (odg), x- linked disorders of gonadal development, and of other diseases and clinical conditions associated with FSHPRH1.

[33598] The function of FSHPRH1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM189.1.Follistatin-like 1 (FSTL1, Accession NP_009016.1) is another GAM281 target gene, herein designated TARGET GENE. FSTL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FSTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FSTL1 BINDING SITE, designated SEQ ID:11213, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33599] Another function of GAM281 is therefore inhibition of Follistatin-like 1 (FSTL1, Accession NP_009016.1), a gene which may modulate the action of some growth factors on cell proliferation and differentiation. and therefore may be associated with Rheumatoid arthritis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Rheumatoid arthritis., and of other diseases and clinical conditions associated with FSTL1.

[33600] The function of FSTL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM279.1.Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) is another GAM281 target gene, herein designated TARGET GENE. FUT1 BINDING SITE1 and FUT1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FUT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT1 BINDING SITE1 and FUT1 BINDING SITE2, designated SEQ ID:11525 and SEQ ID:16365 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33601] Another function of GAM281 is therefore inhibition of Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT1.

[33602] Frizzled homolog 4 (drosophila) (FZD4, Accession NP_036325.2) is another GAM281 target gene, herein

designated TARGET GENE. FZD4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FZD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FZD4 BINDING SITE, designated SEQ ID:4487, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33603] Another function of GAM281 is therefore inhibition of Frizzled homolog 4 (drosophila) (FZD4, Accession NP_036325.2), a gene which may function in cell polarity, cell fate specification and cancer; similar to frizzled receptor family, has seven transmembrane domains and therefore may be associated with Familial exudative vitreoretinopathy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Familial exudative vitreoretinopathy., and of other diseases and clinical conditions associated with FZD4.

[33604] The function of FZD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1.Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075010.1) is another GAM281

target gene, herein designated TARGET GENE. G1P3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by G1P3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G1P3 BINDING SITE, designated SEQ ID:724, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33605] Another function of GAM281 is therefore inhibition of Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075010.1), a gene which is an interferon-stimulated gene (ISG). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G1P3.

[33606] The function of G1P3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_002029.3) is another GAM281 target gene, herein designated TARGET GENE. G1P3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA en-

coded by G1P3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G1P3 BINDING SITE, designated SEQ ID:724, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33607] Another function of GAM281 is therefore inhibition of Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_002029.3), a gene which is an interferon-stimulated gene (ISG). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G1P3.

[33608] The function of G1P3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075011.1) is another GAM281 target gene, herein designated TARGET GENE. G1P3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by G1P3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of G1P3 BINDING SITE, designated SEQ ID:724, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33609] Another function of GAM281 is therefore inhibition of Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075011.1), a gene which is an interferon-stimulated gene (ISG). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G1P3.

[33610] The function of G1P3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.G2A (Accession NP_037477.1) is another GAM281 target gene, herein designated TARGET GENE. G2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by G2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G2A BINDING SITE, designated SEQ ID:8714, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33611] Another function of GAM281 is therefore inhibition of G2A

(Accession NP_037477.1), a gene which may mediate some of the effects of extracellular atp on insulin secretion. and therefore may be associated with Autoimmune disease. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Autoimmune disease., and of other diseases and clinical conditions associated with G2A.

[33612] The function of G2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glucose-6-phosphatase, catalytic (glycogen storage disease type i, von gierke disease) (G6PC, Accession NP_000142.1) is another GAM281 target gene, herein designated TARGET GENE. G6PC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by G6PC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G6PC BINDING SITE, designated SEQ ID:4204, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33613] Another function of GAM281 is therefore inhibition of Glucose-6-phosphatase, catalytic (glycogen storage dis-

ease type i, von gierke disease) (G6PC, Accession NP_000142.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G6PC.

[33614] GAL3ST-4 (Accession NP_078913.3) is another GAM281 target gene, herein designated TARGET GENE. GAL3ST-4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GAL3ST-4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAL3ST-4 BINDING SITE, designated SEQ ID:4518, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33615] Another function of GAM281 is therefore inhibition of GAL3ST-4 (Accession NP_078913.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAL3ST-4.

[33616] Gata binding protein 2 (GATA2, Accession NP_116027.2) is another GAM281 target gene, herein designated TARGET GENE. GATA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

GATA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GATA2 BINDING SITE, designated SEQ ID:16014, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33617] Another function of GAM281 is therefore inhibition of Gata binding protein 2 (GATA2, Accession NP_116027.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GATA2.

[33618] GBP4 (Accession NP_443173.2) is another GAM281 target gene, herein designated TARGET GENE. GBP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GBP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GBP4 BINDING SITE, designated SEQ ID:15052, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33619] Another function of GAM281 is therefore inhibition of

GBP4 (Accession NP_443173.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GBP4.

[33620] Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_619581.1) is another GAM281 target gene, herein designated TARGET GENE. GGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:5631, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33621] Another function of GAM281 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_619581.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2.

[33622] Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) is another GAM281 target gene, herein designated TARGET GENE.

GGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:5631, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33623] Another function of GAM281 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2.

[33624] Gamma-glutamyltransferase 1 (GGT1, Accession NP_005256.1) is another GAM281 target gene, herein designated TARGET GENE. GGT1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by GGT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT1 BINDING SITE, designated SEQ ID:13688, to the nucleotide

sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33625] Another function of GAM281 is therefore inhibition of Gamma-glutamyltransferase 1 (GGT1, Accession NP_005256.1), a gene which catalyzes the transfer of the glutamyl moiety of glutathione to a variety of amino acids and dipeptide acceptors and therefore is associated with Glutathionuria. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Glutathionuria, and of other diseases and clinical conditions associated with GGT1.

[33626] The function of GGT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Gamma-glutamyltransferase 1 (GGT1, Accession NP_038265.1) is another GAM281 target gene, herein designated TARGET GENE. GGT1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by GGT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT1 BINDING SITE, designated SEQ ID:13688, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33627] Another function of GAM281 is therefore inhibition of Gamma-glutamyltransferase 1 (GGT1, Accession NP_038265.1), a gene which catalyzes the transfer of the glutamyl moiety of glutathione to a variety of amino acids and dipeptide acceptors and therefore is associated with Glutathionuria. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Glutathionuria, and of other diseases and clinical conditions associated with GGT1.

[33628] The function of GGT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Gamma-glutamyltransferase 1 (GGT1, Accession NP_038347.1) is another GAM281 target gene, herein designated TARGET GENE. GGT1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by GGT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT1 BINDING SITE, designated SEQ ID:13688, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33629] Another function of GAM281 is therefore inhibition of Gamma-glutamyltransferase 1 (GGT1, Accession NP_038347.1), a gene which catalyzes the transfer of the glutamyl moiety of glutathione to a variety of amino acids and dipeptide acceptors and therefore is associated with Glutathionuria. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Glutathionuria, and of other diseases and clinical conditions associated with GGT1.

[33630] The function of GGT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Gamma-glutamyltransferase 2 (GGT2, Accession XP_290331.1) is another GAM281 target gene, herein designated TARGET GENE. GGT2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GGT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGT2 BINDING SITE, designated SEQ ID:13688, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33631] Another function of GAM281 is therefore inhibition of Gamma-glutamyltransferase 2 (GGT2, Accession XP_290331.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGT2.

[33632] Gm2 ganglioside activator protein (GM2A, Accession NP_000396.1) is another GAM281 target gene, herein designated TARGET GENE. GM2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GM2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GM2A BINDING SITE, designated SEQ ID:11286, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33633] Another function of GAM281 is therefore inhibition of Gm2 ganglioside activator protein (GM2A, Accession NP_000396.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GM2A.

[33634] GNE (Accession NP_005467.1) is another GAM281 target gene, herein designated TARGET GENE. GNE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNE BINDING SITE, designated SEQ ID:8367, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33635] Another function of GAM281 is therefore inhibition of GNE (Accession NP_005467.1), a gene which has roles in sialic acid biosynthesis and regulates cell surface sialylation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNE.

[33636] The function of GNE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Guanine nucleotide binding protein (g protein), gamma 4 (GNG4, Accession NP_004476.1) is another GAM281 target gene, herein designated TARGET GENE. GNG4 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by GNG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNG4 BINDING SITE, designated SEQ ID:559, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33637] Another function of GAM281 is therefore inhibition of Guanine nucleotide binding protein (g protein), gamma 4 (GNG4, Accession NP_004476.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNG4.

[33638] GNPNAT1 (Accession XP_085119.1) is another GAM281 target gene, herein designated TARGET GENE. GNPNAT1 BINDING SITE1 and GNPNAT1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GNPNAT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNPNAT1 BINDING SITE1 and GNPNAT1 BINDING SITE2, designated SEQ ID:8464 and SEQ ID:854 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[33639] Another function of GAM281 is therefore inhibition of GNPNAT1 (Accession XP_085119.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNPNAT1.

[33640] GNRPX (Accession NP_060519.1) is another GAM281 target gene, herein designated TARGET GENE. GNRPX BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNRPX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNRPX BINDING SITE, designated SEQ ID:12243, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33641] Another function of GAM281 is therefore inhibition of GNRPX (Accession NP_060519.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNRPX.

[33642] Golgi autoantigen, golgin subfamily a, 1 (GOLGA1, Accession NP_002068.1) is another GAM281 target gene, herein designated TARGET GENE. GOLGA1 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of mRNA encoded by GOLGA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGA1 BINDING SITE, designated SEQ ID:12206, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33643] Another function of GAM281 is therefore inhibition of Golgi autoantigen, golgin subfamily a, 1 (GOLGA1, Accession NP_002068.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GOLGA1.

[33644] Golgi autoantigen, golgin subfamily a, 3 (GOLGA3, Accession NP_005886.2) is another GAM281 target gene, herein designated TARGET GENE. GOLGA3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GOLGA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGA3 BINDING SITE, designated SEQ ID:15049, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33645] Another function of GAM281 is therefore inhibition of Golgi autoantigen, golgin subfamily a, 3 (GOLGA3, Accession NP_005886.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GOLGA3.

[33646] GOLGIN-67 (Accession NP_851421.1) is another GAM281 target gene, herein designated TARGET GENE. GOLGIN-67 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by GOLGIN-67, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGIN-67 BINDING SITE, designated SEQ ID:4244, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33647] Another function of GAM281 is therefore inhibition of GOLGIN-67 (Accession NP_851421.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GOLGIN-67.

[33648] Glycoprotein v (platelet) (GP5, Accession NP_004479.1) is another GAM281 target gene, herein designated TARGET GENE. GP5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GP5 BINDING SITE, designated SEQ ID:5681, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33649] Another function of GAM281 is therefore inhibition of Glycoprotein v (platelet) (GP5, Accession NP_004479.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GP5.

[33650] GPP34R (Accession NP_060648.2) is another GAM281 target gene, herein designated TARGET GENE. GPP34R BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPP34R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPP34R BINDING SITE, designated SEQ ID:14203, to the nucleotide

sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33651] Another function of GAM281 is therefore inhibition of GPP34R (Accession NP_060648.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPP34R.

[33652] G protein-coupled receptor 114 (GPR114, Accession NP_722579.1) is another GAM281 target gene, herein designated TARGET GENE. GPR114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR114 BINDING SITE, designated SEQ ID:10636, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33653] Another function of GAM281 is therefore inhibition of G protein-coupled receptor 114 (GPR114, Accession NP_722579.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR114.

[33654] G protein-coupled receptor 26 (GPR26, Accession

NP_703143.1) is another GAM281 target gene, herein designated TARGET GENE. GPR26 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR26 BINDING SITE, designated SEQ ID:3010, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33655] Another function of GAM281 is therefore inhibition of G protein-coupled receptor 26 (GPR26, Accession NP_703143.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR26.

[33656] G protein-coupled receptor 4 (GPR4, Accession NP_005273.1) is another GAM281 target gene, herein designated TARGET GENE. GPR4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR4 BINDING SITE, designated SEQ ID:4965, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[33657] Another function of GAM281 is therefore inhibition of G protein-coupled receptor 4 (GPR4, Accession NP_005273.1), a gene which stimulates to produce increased calcium by both SPC and LPC . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR4.

[33658] The function of GPR4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.G protein-coupled receptor 56 (GPR56, Accession NP_005673.2) is another GAM281 target gene, herein designated TARGET GENE. GPR56 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GPR56, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR56 BINDING SITE, designated SEQ ID:8622, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33659] Another function of GAM281 is therefore inhibition of G

protein-coupled receptor 56 (GPR56, Accession NP_005673.2), a gene which transduces extracellular signals through heterotrimeric G proteins. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR56.

[33660] The function of GPR56 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.G protein-coupled receptor 61 (GPR61, Accession NP_114142.2) is another GAM281 target gene, herein designated TARGET GENE. GPR61 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR61, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR61 BINDING SITE, designated SEQ ID:15604, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33661] Another function of GAM281 is therefore inhibition of G protein-coupled receptor 61 (GPR61, Accession NP_114142.2), a gene which transduces extracellular sig-

nals through heterotrimeric G proteins. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR61.

[33662] The function of GPR61 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.G protein-coupled receptor 66 (GPR66, Accession NP_006047.2) is another GAM281 target gene, herein designated TARGET GENE. GPR66 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR66, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR66 BINDING SITE, designated SEQ ID:19237, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33663] Another function of GAM281 is therefore inhibition of G protein-coupled receptor 66 (GPR66, Accession NP_006047.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR66.

[33664] G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) is another GAM281 target gene, herein designated TARGET GENE. GPR81 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR81, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR81 BINDING SITE, designated SEQ ID:13260, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33665] Another function of GAM281 is therefore inhibition of G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR81.

[33666] GR6 (Accession NP_031380.1) is another GAM281 target gene, herein designated TARGET GENE. GR6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GR6 BINDING

SITE, designated SEQ ID:2604, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33667] Another function of GAM281 is therefore inhibition of GR6 (Accession NP_031380.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GR6.

[33668] GRAF (Accession NP_055886.1) is another GAM281 target gene, herein designated TARGET GENE. GRAF BINDING SITE1 and GRAF BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GRAF, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRAF BINDING SITE1 and GRAF BINDING SITE2, designated SEQ ID:13350 and SEQ ID:4362 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33669] Another function of GAM281 is therefore inhibition of GRAF (Accession NP_055886.1), a gene which ia a GTPase activating protein for p21- rac and therefore may be associated with Juvenile myelomonocytic leukemia. Accordingly, utilities of GAM281 include diagnosis, prevention

and treatment of Juvenile myelomonocytic leukemia, and of other diseases and clinical conditions associated with GRAF.

[33670] The function of GRAF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.GREB1 (Accession NP_055483.2) is another GAM281 target gene, herein designated TARGET GENE. GREB1 BINDING SITE1 through GREB1 BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by GREB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GREB1 BINDING SITE1 through GREB1 BINDING SITE3, designated SEQ ID:14113, SEQ ID:14861 and SEQ ID:9792 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33671] Another function of GAM281 is therefore inhibition of GREB1 (Accession NP_055483.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GREB1.

[33672] Glutamate receptor, ionotropic, delta 1 (GRID1, Accession

XP_043613.8) is another GAM281 target gene, herein designated TARGET GENE. GRID1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRID1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRID1 BINDING SITE, designated SEQ ID:17390, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33673] Another function of GAM281 is therefore inhibition of Glutamate receptor, ionotropic, delta 1 (GRID1, Accession XP_043613.8) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRID1.

[33674] Glutamate receptor, ionotropic, n-methyl d-aspartate-like 1a (GRINL1A, Accession NP_056347.1) is another GAM281 target gene, herein designated TARGET GENE. GRINL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRINL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

GRINL1A BINDING SITE, designated SEQ ID:5433, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33675] Another function of GAM281 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl d-aspartate-like 1a (GRINL1A, Accession NP_056347.1), a gene which plays a role in the development and function of the mammalian brain. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRINL1A.

[33676] The function of GRINL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) is another GAM281 target gene, herein designated TARGET GENE. GRM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRM6 BINDING SITE, designated SEQ ID:10398, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[33677] Another function of GAM281 is therefore inhibition of Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRM6.

[33678] GRWD (Accession NP_113673.2) is another GAM281 target gene, herein designated TARGET GENE. GRWD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRWD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRWD BINDING SITE, designated SEQ ID:7996, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33679] Another function of GAM281 is therefore inhibition of GRWD (Accession NP_113673.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRWD.

[33680] GSDM (Accession XP_209009.1) is another GAM281 target gene, herein designated TARGET GENE. GSDM BINDING SITE is a target binding site found in the 3` untranslated

region of multiple transcripts of mRNA encoded by GSDM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSDM BINDING SITE, designated SEQ ID:3199, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33681] Another function of GAM281 is therefore inhibition of GSDM (Accession XP_209009.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSDM.

[33682] GSDM (Accession NP_835465.1) is another GAM281 target gene, herein designated TARGET GENE. GSDM BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GSDM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSDM BINDING SITE, designated SEQ ID:3199, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33683] Another function of GAM281 is therefore inhibition of GSDM (Accession NP_835465.1) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSDM.

[33684] Glutathione s-transferase m1 (GSTM1, Accession NP_000552.2) is another GAM281 target gene, herein designated TARGET GENE. GSTM1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GSTM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSTM1 BINDING SITE, designated SEQ ID:12752, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33685] Another function of GAM281 is therefore inhibition of Glutathione s-transferase m1 (GSTM1, Accession NP_000552.2), a gene which is conjugation of reduced glutathione to a wide number of exogenous and endogenous hydrophobic electrophiles. and therefore may be associated with Aplastic anemia and cancer. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Aplastic anemia and cancer, and of other diseases and clinical conditions associated with GSTM1.

[33686] The function of GSTM1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glutathione s-transferase m1 (GSTM1, Accession NP_666533.1) is another GAM281 target gene, herein designated TARGET GENE. GSTM1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GSTM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSTM1 BINDING SITE, designated SEQ ID:12752, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33687] Another function of GAM281 is therefore inhibition of Glutathione s-transferase m1 (GSTM1, Accession NP_666533.1), a gene which is conjugation of reduced glutathione to a wide number of exogenous and endogenous hydrophobic electrophiles. and therefore may be associated with Aplastic anemia and cancer. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Aplastic anemia and cancer, and of other diseases and clinical conditions associated with GSTM1.

[33688] The function of GSTM1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glutathione s-transferase m2 (muscle) (GSTM2, Accession NP_000839.1) is another GAM281 target gene, herein designated TARGET GENE. GSTM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GSTM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSTM2 BINDING SITE, designated SEQ ID:12752, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33689] Another function of GAM281 is therefore inhibition of Glutathione s-transferase m2 (muscle) (GSTM2, Accession NP_000839.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSTM2.

[33690] Glutathione s-transferase m4 (GSTM4, Accession NP_671490.1) is another GAM281 target gene, herein designated TARGET GENE. GSTM4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GSTM4, correspond-

ing to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSTM4 BINDING SITE, designated SEQ ID:12752, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33691] Another function of GAM281 is therefore inhibition of Glutathione s-transferase m4 (GSTM4, Accession NP_671490.1), a gene which conjugates reduced glutathione to a wide number of exogenous and endogenous hydrophobic electrophiles. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSTM4.

[33692] The function of GSTM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glutathione s-transferase m4 (GSTM4, Accession NP_000841.1) is another GAM281 target gene, herein designated TARGET GENE. GSTM4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GSTM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of GSTM4 BINDING SITE, designated SEQ ID:12752, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33693] Another function of GAM281 is therefore inhibition of Glutathione s-transferase m4 (GSTM4, Accession NP_000841.1), a gene which conjugates reduced glutathione to a wide number of exogenous and endogenous hydrophobic electrophiles. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSTM4.

[33694] The function of GSTM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.General transcription factor iie, polypeptide 1, alpha 56kda (GTF2E1, Accession NP_005504.1) is another GAM281 target gene, herein designated TARGET GENE. GTF2E1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GTF2E1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2E1 BINDING SITE, designated

SEQ ID:15661, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33695] Another function of GAM281 is therefore inhibition of General transcription factor iie, polypeptide 1, alpha 56kda (GTF2E1, Accession NP_005504.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2E1.

[33696] GTF2IRD2 (Accession NP_775808.1) is another GAM281 target gene, herein designated TARGET GENE. GTF2IRD2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GTF2IRD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2IRD2 BINDING SITE, designated SEQ ID:11522, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33697] Another function of GAM281 is therefore inhibition of GTF2IRD2 (Accession NP_775808.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with GTF2IRD2.

[33698] GTF2IRD2 (Accession NP_115579.3) is another GAM281 target gene, herein designated TARGET GENE. GTF2IRD2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GTF2IRD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2IRD2 BINDING SITE, designated SEQ ID:11522, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33699] Another function of GAM281 is therefore inhibition of GTF2IRD2 (Accession NP_115579.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2IRD2.

[33700] GTPBG3 (Accession NP_116009.1) is another GAM281 target gene, herein designated TARGET GENE. GTPBG3 BINDING SITE1 and GTPBG3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GTPBG3, corresponding to target binding sites such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTPBG3 BINDING SITE1 and GTPBG3 BINDING SITE2, designated SEQ ID:7812 and SEQ ID:10292 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33701] Another function of GAM281 is therefore inhibition of GTPBG3 (Accession NP_116009.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTPBG3.

[33702] Glycogenin (GYG, Accession NP_004121.2) is another GAM281 target gene, herein designated TARGET GENE. GYG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GYG BINDING SITE, designated SEQ ID:4258, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33703] Another function of GAM281 is therefore inhibition of Glycogenin (GYG, Accession NP_004121.2), a gene which

primes de novo glycogen synthesis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GYG.

[33704] The function of GYG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.H-plk (Accession NP_056936.1) is another GAM281 target gene, herein designated TARGET GENE. H-plk BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by H-plk, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H-plk BINDING SITE, designated SEQ ID:12753, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33705] Another function of GAM281 is therefore inhibition of H-plk (Accession NP_056936.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H-plk.

[33706] H2AV (Accession NP_619541.1) is another GAM281 target gene, herein designated TARGET GENE. H2AV BINDING SITE is a target binding site found in the 3` untranslated

region of multiple transcripts of mRNA encoded by H2AV, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H2AV BINDING SITE, designated SEQ ID:18864, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33707] Another function of GAM281 is therefore inhibition of H2AV (Accession NP_619541.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H2AV.

[33708] H63 (Accession NP_612432.2) is another GAM281 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:4554, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33709] Another function of GAM281 is therefore inhibition of H63 (Accession NP_612432.2) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[33710] H63 (Accession NP_816929.1) is another GAM281 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:4554, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33711] Another function of GAM281 is therefore inhibition of H63 (Accession NP_816929.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[33712] Hepatitis a virus cellular receptor 2 (HAVCR2, Accession NP_116171.2) is another GAM281 target gene, herein designated TARGET GENE. HAVCR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HAVCR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of HAVCR2 BINDING SITE, designated SEQ ID:16260, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33713] Another function of GAM281 is therefore inhibition of Hepatitis a virus cellular receptor 2 (HAVCR2, Accession NP_116171.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HAVCR2.

[33714] Hemopoietic cell kinase (HCK, Accession NP_002101.2) is another GAM281 target gene, herein designated TARGET GENE. HCK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HCK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HCK BINDING SITE, designated SEQ ID:7142, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33715] Another function of GAM281 is therefore inhibition of Hemopoietic cell kinase (HCK, Accession NP_002101.2), a gene which is non- receptor protein tyrosine kinase. and therefore may be associated with Leukemias. Accordingly,

utilities of GAM281 include diagnosis, prevention and treatment of Leukemias., and of other diseases and clinical conditions associated with HCK.

[33716] The function of HCK has been established by previous studies. During a search for a cDNA clone representing human SRC (OMIM Ref. No. 190090), Quintrell et al. (1987) encountered a previously unrecognized gene that appeared to encode a protein- tyrosine kinase similar to SRC. Ziegler et al. (1987) found the same gene by a different route. Expression of this gene may be limited to certain hemopoietic cells and is especially prominent in cells of myeloid lineage, particularly mature granulocytes and monocytes. Therefore, Quintrell et al. (1987) designated the gene HCK (pronounced 'hick') for hemopoietic cell kinase. They described the nucleotide sequence of a cDNA clone that represents most or all of the mRNA for HCK, the deduced amino acid sequence of the protein encoded by HCK, and the distribution of RNA transcribed from HCK among various hemopoietic cells. By spot- blot analysis of sorted chromosomes and by in situ hybridization, Quintrell et al. (1987) assigned the HCK gene to 20q11- q12. Since this region is affected by interstitial deletions in some acute myeloid leukemias and myeloproliferative dis-

orders, they suggested that damage to HCK may contribute to the pathogenesis of these conditions.

[33717]

[33718] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[33719] Quintrell, N.; Lebo, R.; Varmus, H.; Bishop, J. M.; Pettenati, M. J.; Le Beau, M. M.; Diaz, M. O.; Rowley, J. D. : Identification of a human gene (HCK) that encodes a protein- tyrosine kinase and is expressed in hemopoietic cells. Molec. Cell. Biol. 7: 2267- 2275, 1987. ; and

[33720] Ziegler, S. F.; Marth, J. D.; Lewis, D. B.; Perlmutter, R. M. : Novel protein- tyrosine kinase gene (hck) preferentially expressed in cells of hematopoietic origin. Molec. Cell. Biol. 7:.

[33721] Further studies establishing the function and utilities of HCK are found in John Hopkins OMIM database record ID 142370, and in cited publications listed in Table 5, which are hereby incorporated by reference.HE9 (Accession NP_741997.1) is another GAM281 target gene, herein designated TARGET GENE. HE9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HE9, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HE9 BINDING SITE, designated SEQ ID:7942, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33722] Another function of GAM281 is therefore inhibition of HE9 (Accession NP_741997.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HE9.

[33723] HECA (Accession NP_057301.1) is another GAM281 target gene, herein designated TARGET GENE. HECA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HECA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HECA BINDING SITE, designated SEQ ID:17954, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33724] Another function of GAM281 is therefore inhibition of HECA (Accession NP_057301.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HECA.

[33725] HEMK (Accession NP_057257.1) is another GAM281 target gene, herein designated TARGET GENE. HEMK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HEMK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEMK BINDING SITE, designated SEQ ID:6468, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33726] Another function of GAM281 is therefore inhibition of HEMK (Accession NP_057257.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEMK.

[33727] Hephaestin (HEPH, Accession NP_055614.1) is another GAM281 target gene, herein designated TARGET GENE. HEPH BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by HEPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEPH BINDING SITE, designated SEQ ID:15338, to the nucleotide sequence of GAM281

RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33728] Another function of GAM281 is therefore inhibition of Hephaestin (HEPH, Accession NP_055614.1), a gene which is thought to be a membrane- bound protein responsible for transport of dietary iron from epithelial cells of the intestinal lumen into the circulatory system. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEPH.

[33729] The function of HEPH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Hexosaminidase a (alpha polypeptide) (HEXA, Accession NP_000511.1) is another GAM281 target gene, herein designated TARGET GENE. HEXA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HEXA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEXA BINDING SITE, designated SEQ ID:14035, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[33730] Another function of GAM281 is therefore inhibition of Hexosaminidase a (alpha polypeptide) (HEXA, Accession NP_000511.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEXA.

[33731] Herv-h ltr-associating 3 (HHLA3, Accession XP_294968.1) is another GAM281 target gene, herein designated TARGET GENE. HHLA3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by HHLA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HHLA3 BINDING SITE, designated SEQ ID:13713, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33732] Another function of GAM281 is therefore inhibition of Herv-h ltr-associating 3 (HHLA3, Accession XP_294968.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HHLA3.

[33733] Herv-h ltr-associating 3 (HHLA3, Accession NP_009002.1)

is another GAM281 target gene, herein designated TARGET GENE. HHLA3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by HHLA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HHLA3 BINDING SITE, designated SEQ ID:13713, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33734] Another function of GAM281 is therefore inhibition of Herv-h ltr-associating 3 (HHLA3, Accession NP_009002.1). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HHLA3.

[33735] HIC (Accession XP_041273.1) is another GAM281 target gene, herein designated TARGET GENE. HIC BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HIC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIC BINDING SITE, designated SEQ ID:488, to the nucleotide sequence

of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33736] Another function of GAM281 is therefore inhibition of HIC (Accession XP_041273.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIC.

[33737] Holocarboxylase synthetase (biotin-[proprionyl-coenzyme a-carboxylase (atp-hydrolysing)] ligase) (HLCS, Accession NP_000402.2) is another GAM281 target gene, herein designated TARGET GENE. HLCS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HLCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HLCS BINDING SITE, designated SEQ ID:2142, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33738] Another function of GAM281 is therefore inhibition of Holocarboxylase synthetase (biotin-[proprionyl-coenzyme a-carboxylase (atp-hydrolysing)] ligase) (HLCS, Accession NP_000402.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HLCS.

[33739] High-mobility group 20a (HMG20A, Accession NP_060670.1) is another GAM281 target gene, herein designated TARGET GENE. HMG20A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HMG20A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMG20A BINDING SITE, designated SEQ ID:5040, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33740] Another function of GAM281 is therefore inhibition of High-mobility group 20a (HMG20A, Accession NP_060670.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMG20A.

[33741] HPRN (Accession NP_071938.1) is another GAM281 target gene, herein designated TARGET GENE. HPRN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HPRN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HPRN BIND-

ING SITE, designated SEQ ID:12916, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33742] Another function of GAM281 is therefore inhibition of HPRN (Accession NP_071938.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HPRN.

[33743] Histamine receptor h4 (HRH4, Accession NP_067637.2) is another GAM281 target gene, herein designated TARGET GENE. HRH4 BINDING SITE1 through HRH4 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by HRH4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRH4 BINDING SITE1 through HRH4 BINDING SITE3, designated SEQ ID:5301, SEQ ID:5358 and SEQ ID:3116 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33744] Another function of GAM281 is therefore inhibition of Histamine receptor h4 (HRH4, Accession NP_067637.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with HRH4.

[33745] HSC3 (Accession NP_660157.1) is another GAM281 target gene, herein designated TARGET GENE. HSC3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSC3 BINDING SITE, designated SEQ ID:1095, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33746] Another function of GAM281 is therefore inhibition of HSC3 (Accession NP_660157.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSC3.

[33747] HSD3B7 (Accession NP_079469.2) is another GAM281 target gene, herein designated TARGET GENE. HSD3B7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSD3B7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD3B7 BINDING SITE, designated SEQ ID:2674, to the nucleotide

sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33748] Another function of GAM281 is therefore inhibition of HSD3B7 (Accession NP_079469.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD3B7.

[33749] HSMPP8 (Accession XP_167894.1) is another GAM281 target gene, herein designated TARGET GENE. HSMPP8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSMPP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSMPP8 BINDING SITE, designated SEQ ID:7797, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33750] Another function of GAM281 is therefore inhibition of HSMPP8 (Accession XP_167894.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSMPP8.

[33751] HSNOV1 (Accession NP_059985.2) is another GAM281

target gene, herein designated TARGET GENE. HSNOV1 BINDING SITE1 and HSNOV1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HSNOV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSNOV1 BINDING SITE1 and HSNOV1 BINDING SITE2, designated SEQ ID:849 and SEQ ID:12942 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33752] Another function of GAM281 is therefore inhibition of HSNOV1 (Accession NP_059985.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSNOV1.

[33753] HSPC065 (Accession NP_054876.2) is another GAM281 target gene, herein designated TARGET GENE. HSPC065 BINDING SITE1 and HSPC065 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HSPC065, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of HSPC065 BINDING SITE1 and HSPC065 BINDING SITE2, designated SEQ ID:4676 and SEQ ID:713 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33754] Another function of GAM281 is therefore inhibition of HSPC065 (Accession NP_054876.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC065.

[33755] 5-hydroxytryptamine (serotonin) receptor 1d (HTR1D, Accession NP_000855.1) is another GAM281 target gene, herein designated TARGET GENE. HTR1D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR1D BINDING SITE, designated SEQ ID:2563, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33756] Another function of GAM281 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 1d (HTR1D, Ac-

cession NP_000855.1), a gene which belongs to g- protein coupled receptor. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR1D.

[33757] The function of HTR1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.5-hydroxytryptamine (serotonin) receptor 1e (HTR1E, Accession NP_000856.1) is another GAM281 target gene, herein designated TARGET GENE. HTR1E BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR1E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR1E BINDING SITE, designated SEQ ID:538, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33758] Another function of GAM281 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 1e (HTR1E, Accession NP_000856.1), a gene which belongs to g- protein coupled receptors. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with HTR1E.

[33759] The function of HTR1E and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.5-hydroxytryptamine (serotonin) receptor 3b (HTR3B, Accession NP_006019.1) is another GAM281 target gene, herein designated TARGET GENE. HTR3B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR3B BINDING SITE, designated SEQ ID:656, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33760] Another function of GAM281 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 3b (HTR3B, Accession NP_006019.1), a gene which is a component of ligand gated ion channels. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR3B.

[33761] The function of HTR3B has been established by previous studies. Serotonin mediates rapid excitatory responses

through ligand- gated channels (HTR3 receptors). When expressed as a homomeric unit, HTR3A (OMIM Ref. No. 182139) is a functional receptor but displays rather weak conductance. By searching human genome sequence data, Davies et al. (1999) identified a homolog of the HTR3A subunit in a PAC clone from 11q23.1, the same chromosomal location of HTR3A. Using anchored PCR to screen brain and kidney cDNA libraries, they obtained a cDNA clone, which they designated HTR3B, that encodes a 441-amino acid protein with 41% sequence identity to HTR3A. Northern blot analysis revealed expression of a 4.4- kb transcript in kidney and brain, specifically in caudate nucleus, hippocampus, and thalamus, and particularly in amygdala. These regions of the brain also express 2.4- kb transcripts for HTR3A. HTR3B was absent from heart, placenta, lung, liver, skeletal muscle, and pancreas. The authors determined that HTR3B cannot assemble as a homomeric HTR3 receptor but that heteromeric HTR3A/HTR3B receptors display a large single- channel conductance (16 pS), low permeability to calcium ions, and a current- voltage relationship resembling that of characterized neuronal HTR3 channels. By RT- PCR in situ hybridization, Dubin et al. (1999) found that HTR3A and

HTR3B colocalize in amygdala, telencephalon, and entorhinal cortex, as well as in small monocytes of spleen and tonsil, and in uterus, prostate, ovary, placenta, and intestine. Hydropathy analysis indicated that the HTR3B protein has 4 putative transmembrane domains. In contrast to HTR3A, HTR3B lacks the 3 negatively charged residues bracketing the second transmembrane domain that are thought to be critical for the rate of ion transport in acetylcholine receptors (see OMIM Ref. No. CHRNA1, 100690). It also contains 5 potential glycosylation and 4 potential phosphorylation sites.

[33762]

[33763] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[33764] Davies, P. A.; Pistis, M.; Hanna, M. C.; Peters, J. A.; Lambert, J. J.; Hales, T. G.; Kirkness, E. F. : The 5- HT(3B) subunit is a major determinant of serotonin- receptor function. Nature 397: 359- 363, 1999. ; and

[33765] Dubin, A. E.; Huvar, R.; D'Andrea, M. R.; Pyati, J.; Zhu, J. Y.; Joy, K. C.; Wilson, S. J.; Galindo, J. E.; Glass, C. A.; Luo, L.; Jackson, M. R.; Lovenberg, T. W.; Erlander, M. G. : Th.

[33766] Further studies establishing the function and utilities of

HTR3B are found in John Hopkins OMIM database record ID 604654, and in cited publications listed in Table 5, which are hereby incorporated by reference.Hormonally upregulated neu-associated kinase (HUNK, Accession NP_055401.1) is another GAM281 target gene, herein designated TARGET GENE. HUNK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HUNK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUNK BINDING SITE, designated SEQ ID:17952, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33767] Another function of GAM281 is therefore inhibition of Hormonally upregulated neu-associated kinase (HUNK, Accession NP_055401.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUNK.

[33768] Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1) is another GAM281 target gene, herein designated TARGET GENE. HUS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by HUS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUS1 BINDING SITE, designated SEQ ID:14238, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33769] Another function of GAM281 is therefore inhibition of Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1), a gene which May form DNA damage- responsive protein complex . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUS1.

[33770] The function of HUS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Hyaluronoglucosaminidase 1 (HYAL1, Accession NP_695018.1) is another GAM281 target gene, herein designated TARGET GENE. HYAL1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by HYAL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of HYAL1 BINDING SITE, designated SEQ ID:1192, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33771] Another function of GAM281 is therefore inhibition of Hyaluronoglucosaminidase 1 (HYAL1, Accession NP_695018.1), a gene which plays a role in cell proliferation, migration and differentiation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HYAL1.

[33772] The function of HYAL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM180.2.Hyaluronoglucosaminidase 4 (HYAL4, Accession NP_036401.1) is another GAM281 target gene, herein designated TARGET GENE. HYAL4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HYAL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HYAL4 BINDING SITE, designated SEQ ID:2143, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[33773] Another function of GAM281 is therefore inhibition of Hyaluronoglucosaminidase 4 (HYAL4, Accession NP_036401.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HYAL4.

[33774] Intercellular adhesion molecule 1 (cd54), human rhinovirus receptor (ICAM1, Accession NP_000192.1) is another GAM281 target gene, herein designated TARGET GENE. ICAM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ICAM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICAM1 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33775] Another function of GAM281 is therefore inhibition of Intercellular adhesion molecule 1 (cd54), human rhinovirus receptor (ICAM1, Accession NP_000192.1), a gene which binds the integrin LFA- 1 (ITGB2) and promotes adhesion; member of the immunoglobulin superfamily and therefore may be associated with Malaria, cerebral, susceptibility to.

Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Malaria, cerebral, susceptibility to, and of other diseases and clinical conditions associated with ICAM1.

[33776] The function of ICAM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.ICK (Accession NP_057597.2) is another GAM281 target gene, herein designated TARGET GENE. ICK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ICK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICK BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33777] Another function of GAM281 is therefore inhibition of ICK (Accession NP_057597.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ICK.

[33778] ICK (Accession NP_055735.1) is another GAM281 target gene, herein designated TARGET GENE. ICK BINDING SITE

is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ICK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICK BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33779] Another function of GAM281 is therefore inhibition of ICK (Accession NP_055735.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ICK.

[33780] Insulin-like growth factor 1 (somatomedin c) (IGF1, Accession NP_000609.1) is another GAM281 target gene, herein designated TARGET GENE. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IGF1 BINDING SITE, designated SEQ ID:6279, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33781] Another function of GAM281 is therefore inhibition of Insulin-like growth factor 1 (somatomedin c) (IGF1, Accession NP_000609.1), a gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore may be associated with Growth retardation with sensorineural deafness and mental retardation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Growth retardation with sensorineural deafness and mental retardation, and of other diseases and clinical conditions associated with IGF1.

[33782] The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Interleukin 11 (IL11, Accession NP_000632.1) is another GAM281 target gene, herein designated TARGET GENE. IL11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL11 BINDING SITE, designated SEQ ID:11544, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[33783] Another function of GAM281 is therefore inhibition of Interleukin 11 (IL11, Accession NP_000632.1), a gene which stimulates the proliferation of hematopoietic stem cells and megakaryocyte progenitor cells and induces megakaryocyte maturation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL11.

[33784] The function of IL11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM41.1.Interleukin 16 (lymphocyte chemoattractant factor) (IL16, Accession NP_757366.1) is another GAM281 target gene, herein designated TARGET GENE. IL16 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by IL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL16 BINDING SITE, designated SEQ ID:19554, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33785] Another function of GAM281 is therefore inhibition of In-

terleukin 16 (lymphocyte chemoattractant factor) (IL16, Accession NP_757366.1), a gene which modulates T- cell activation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL16.

[33786] The function of IL16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1.Interleukin 21 receptor (IL21R, Accession NP_068570.1) is another GAM281 target gene, herein designated TARGET GENE. IL21R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL21R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL21R BINDING SITE, designated SEQ ID:498, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33787] Another function of GAM281 is therefore inhibition of Interleukin 21 receptor (IL21R, Accession NP_068570.1), a gene which is involved in receptor mediated endocytosis and transduces the mitogenic signals of il- 2. Accordingly,

utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL21R.

[33788] The function of IL21R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Interleukin 21 receptor (IL21R, Accession NP_851565.1) is another GAM281 target gene, herein designated TARGET GENE. IL21R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL21R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL21R BINDING SITE, designated SEQ ID:498, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33789] Another function of GAM281 is therefore inhibition of Interleukin 21 receptor (IL21R, Accession NP_851565.1), a gene which is involved in receptor mediated endocytosis and transduces the mitogenic signals of il- 2. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with IL21R.

[33790] The function of IL21R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Interleukin 21 receptor (IL21R, Accession NP_851564.1) is another GAM281 target gene, herein designated TARGET GENE. IL21R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL21R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL21R BINDING SITE, designated SEQ ID:498, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33791] Another function of GAM281 is therefore inhibition of Interleukin 21 receptor (IL21R, Accession NP_851564.1), a gene which is involved in receptor mediated endocytosis and transduces the mitogenic signals of il- 2. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL21R.

[33792] The function of IL21R and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Interleukin 28 receptor, alpha (IL28RA, Accession NP_775087.1) is another GAM281 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:7046, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33793] Another function of GAM281 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775087.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[33794] Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) is another GAM281 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, correspond-

ing to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:7046, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33795] Another function of GAM281 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[33796] Interleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) is another GAM281 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:7046, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33797] Another function of GAM281 is therefore inhibition of In-

terleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[33798] IMPACT (Accession NP_060909.1) is another GAM281 target gene, herein designated TARGET GENE. IMPACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IMPACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IMPACT BINDING SITE, designated SEQ ID:8975, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33799] Another function of GAM281 is therefore inhibition of IMPACT (Accession NP_060909.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IMPACT.

[33800] INHBE (Accession NP_113667.1) is another GAM281 target gene, herein designated TARGET GENE. INHBE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INHBE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II

or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INHBE BINDING SITE, designated SEQ ID:16283, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33801] Another function of GAM281 is therefore inhibition of INHBE (Accession NP_113667.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INHBE.

[33802] Indolethylamine n-methyltransferase (INMT, Accession NP_006765.3) is another GAM281 target gene, herein designated TARGET GENE. INMT BINDING SITE1 and INMT BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by INMT, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INMT BINDING SITE1 and INMT BINDING SITE2, designated SEQ ID:9149 and SEQ ID:11523 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33803] Another function of GAM281 is therefore inhibition of Indolethylamine n-methyltransferase (INMT, Accession

NP_006765.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INMT.

[33804] Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) is another GAM281 target gene, herein designated TARGET GENE. IRF4 BINDING SITE1 and IRF4 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by IRF4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRF4 BINDING SITE1 and IRF4 BINDING SITE2, designated SEQ ID:2698 and SEQ ID:1517 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33805] Another function of GAM281 is therefore inhibition of Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRF4.

[33806] IRTA2 (Accession NP_112571.1) is another GAM281 target gene, herein designated TARGET GENE. IRTA2 BINDING SITE is a target binding site found in the 5` untranslated

region of mRNA encoded by IRTA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRTA2 BINDING SITE, designated SEQ ID:19371, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33807] Another function of GAM281 is therefore inhibition of IRTA2 (Accession NP_112571.1), a gene which binds to the fc region of immunoglobulins gamma low affinity receptor. and therefore may be associated with Burkitt lymphoma. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Burkitt lymphoma, and of other diseases and clinical conditions associated with IRTA2.

[33808] The function of IRTA2 has been established by previous studies. Chromosomal abnormalities involving translocation breakpoints at 1q21- q23 are frequent in B- cell non- Hodgkin lymphoma (see OMIM Ref. No. BCL9; 602597) and multiple myeloma (MM; OMIM Ref. No. 254500). By cloning the breakpoints of a (1;14)(q21;q32) chromosomal translocation in the FR4 multiple myeloma cell line, followed by exon trapping and screening a

spleen cDNA library, Hatzivassiliou et al. (2001) obtained cDNAs encoding 3 isoforms of IRTA1 (OMIM Ref. No. 605876) and 4 isoforms of IRTA2. The 3 major IRTA2 mRNA isoforms (ITRA2A, ITRA2B, and ITRA2C) each have their own unique 3- prime untranslated region, and the proteins they encode share a common amino acid sequence until residue 560, including a signal peptide and 6 extracellular Ig- type domains. Sequence analysis predicted that IRTA2A is a 759- amino acid secreted glycoprotein with 8 total extracellular Ig- type domains followed by 13 unique, predominantly polar residues at its C terminus. After the common 560 amino acids, IRTA2B has only 32 additional residues, whose hydrophobicity is compatible with its docking to the plasma membrane via a GPI anchor. The 977- amino acid IRTA2C protein shares the first 746 amino acids with IRTA2A. IRTA2C has a total of 9 extracellular Ig- type domains with 8 potential N-linked glycosylation sites; a 23- residue transmembrane region; and a 104- residue cytoplasmic domain with 3 consensus SH2- binding domains, all of which exhibit features of ITIMs (immune- receptor tyrosine- based inhibition motifs) and are encoded by separate exons. The fourth isoform, IRTA2D, encodes a peptide of 152 amino

acids. Northern blot analysis detected 2.8-, 4.4-, 5.3-, and 0.6- kb IRTA2 transcripts in lymph node, spleen, bone marrow, and small intestine, with a preponderance of the IRTA2A isoform. In situ hybridization analysis detected IRTA2 expression in tonsillar germinal center centrocytes, but not in centroblasts, as well as in intraepithelial and interfollicular regions. Nakayama et al. (2001) independently cloned IRTA2, which they called BXMAS1, by representational difference analysis of genes activated by anti- IgM crosslinking of a human B- cell line. The deduced 977- amino acid protein contains 8 ITIMs and 8 potential N- linked glycosylation sites. Northern blot analysis detected a 6.7- kb transcript and a larger transcript between 14- and 17- kb in B cells 24 to 36 hours after activation. Northern blot analysis of tissues detected expression only in spleen In situ hybridization analysis demonstrated expression of IRTA2 in the mantle zone of tonsil tissue but not in germinal center cells

[33809]

[33810] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[33811] Hatzivassiliou, G.; Miller, I.; Takizawa, J.; Palanisamy, N.;

Rao, P. H.; Iida, S.; Tagawa, S.; Taniwaki, M.; Russo, J.; Neri, A.; Cattoretti, G.; Clynes, R.; Mendelsohn, C.; Chaganti, R. S. K.; Dalla- Favera, R. : IRTA1 and IRTA2, novel immunoglobulin superfamily receptors expressed in B cells and involved in chromosome 1q21 abnormalities in B cell malignancy. Immunity 14: 277- 289, 2001. ; and

[33812] Nakayama, Y.; Weissman, S. M.; Bothwell, A. L. M. : BX-MAS1 identifies a cluster of homologous genes differentially expressed in B cells. Biochem. Biophys. Res. Commun. 285: 830- 837, 200.

[33813] Further studies establishing the function and utilities of IRTA2 are found in John Hopkins OMIM database record ID 605877, and in cited publications listed in Table 5, which are hereby incorporated by reference.Integrin, alpha d (ITGAD, Accession XP_113880.1) is another GAM281 target gene, herein designated TARGET GENE. ITGAD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITGAD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGAD BINDING SITE, designated SEQ ID:2749, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[33814] Another function of GAM281 is therefore inhibition of Integrin, alpha d (ITGAD, Accession XP_113880.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGAD.

[33815] Integrin, alpha m (complement component receptor 3, alpha; also known as cd11b (p170), macrophage antigen alpha polypeptide) (ITGAM, Accession NP_000623.1) is another GAM281 target gene, herein designated TARGET GENE. ITGAM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITGAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGAM BINDING SITE, designated SEQ ID:5922, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33816] Another function of GAM281 is therefore inhibition of Integrin, alpha m (complement component receptor 3, alpha; also known as cd11b (p170), macrophage antigen alpha polypeptide) (ITGAM, Accession NP_000623.1), a gene which is invovled in various adhesive interactions of

monocytes, macrophages and granulocytes as well as in mediating the uptake of complement- coated particles. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITGAM.

[33817] The function of ITGAM and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Integrin, alpha x (antigen cd11c (p150), alpha polypeptide) (ITGAX, Accession NP_000878.1) is another GAM281 target gene, herein designated TARGET GENE. ITGAX BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITGAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITGAX BINDING SITE, designated SEQ ID:559, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33818] Another function of GAM281 is therefore inhibition of Integrin, alpha x (antigen cd11c (p150), alpha polypeptide) (ITGAX, Accession NP_000878.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with ITGAX.

[33819] Inositol 1,4,5-triphosphate receptor, type 2 (ITPR2, Accession NP_002214.1) is another GAM281 target gene, herein designated TARGET GENE. ITPR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITPR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITPR2 BINDING SITE, designated SEQ ID:20047, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33820] Another function of GAM281 is therefore inhibition of Inositol 1,4,5-triphosphate receptor, type 2 (ITPR2, Accession NP_002214.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITPR2.

[33821] Janus kinase 3 (a protein tyrosine kinase, leukocyte) (JAK3, Accession NP_000206.1) is another GAM281 target gene, herein designated TARGET GENE. JAK3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JAK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JAK3 BINDING SITE, designated SEQ ID:18060, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33822] Another function of GAM281 is therefore inhibition of Janus kinase 3 (a protein tyrosine kinase, leukocyte) (JAK3, Accession NP_000206.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JAK3.

[33823] JDP2 (Accession NP_569736.1) is another GAM281 target gene, herein designated TARGET GENE. JDP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JDP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JDP2 BINDING SITE, designated SEQ ID:2088, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33824] Another function of GAM281 is therefore inhibition of JDP2 (Accession NP_569736.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with JDP2.

[33825] JM11 (Accession NP_296375.1) is another GAM281 target gene, herein designated TARGET GENE. JM11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JM11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JM11 BINDING SITE, designated SEQ ID:10197, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33826] Another function of GAM281 is therefore inhibition of JM11 (Accession NP_296375.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JM11.

[33827] Jerky homolog (mouse) (JRK, Accession NP_003715.1) is another GAM281 target gene, herein designated TARGET GENE. JRK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JRK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JRK BINDING SITE, designated SEQ ID:3927, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33828] Another function of GAM281 is therefore inhibition of Jerky homolog (mouse) (JRK, Accession NP_003715.1), a gene which might function as a DNA- binding protein. and therefore may be associated with Absence epilepsy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Absence epilepsy, and of other diseases and clinical conditions associated with JRK.

[33829] The function of JRK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.JWA (Accession NP_006398.1) is another GAM281 target gene, herein designated TARGET GENE. JWA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JWA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JWA BINDING SITE, designated SEQ ID:8446, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33830] Another function of GAM281 is therefore inhibition of JWA

(Accession NP_006398.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JWA.

[33831] Potassium inwardly-rectifying channel, subfamily j, member 11 (KCNJ11, Accession NP_000516.2) is another GAM281 target gene, herein designated TARGET GENE. KCNJ11 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KCNJ11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ11 BINDING SITE, designated SEQ ID:15049, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33832] Another function of GAM281 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 11 (KCNJ11, Accession NP_000516.2), a gene which is controlled by g proteins. inward rectifier k+ channels are characterized by a greater tendancy to allow potassium to flow into the cell rather than out of it. and therefore is associated with Persistent hyperinsulinemic hypoglycemia of infancy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Persistent hyperinsuline-

mic hypoglycemia of infancy, and of other diseases and clinical conditions associated with KCNJ11.

[33833] The function of KCNJ11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733938.1) is another GAM281 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:2456, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33834] Another function of GAM281 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733938.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[33835] Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_061128.1) is another GAM281 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:2456, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33836] Another function of GAM281 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_061128.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[33837] Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733937.1) is another GAM281 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA

encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:2456, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33838] Another function of GAM281 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733937.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[33839] Potassium channel, subfamily k, member 3 (KCNK3, Accession NP_002237.1) is another GAM281 target gene, herein designated TARGET GENE. KCNK3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KCNK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNK3 BINDING SITE, designated SEQ ID:16912, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[33840] Another function of GAM281 is therefore inhibition of Potassium channel, subfamily k, member 3 (KCNK3, Accession NP_002237.1), a gene which is a ph- dependent, voltage- insensitive, background potassium channel. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNK3.

[33841] The function of KCNK3 has been established by previous studies. Potassium channels are ubiquitous multisubunit membrane proteins that regulate membrane potential in numerous cell types. One family of mammalian K+ channels is characterized by the presence of 4 transmembrane domains and 2 P domains per subunit; this family includes TASK, TWIK (KCNK1; 601745), and TREK (KCNK2; 603219). Duprat et al. (1997) identified mouse expressed sequence tags with similarity to TREK and TWIK and cloned a corresponding cDNA from a mouse brain library. The mouse cDNA was used to clone the human counterpart from a kidney cDNA library. The human cDNA, designated TASK, encodes a 394- amino acid polypeptide with 85% identity to the mouse ortholog. The sequence contains consensus sites for N- linked glycosylation and for

phosphorylation at the C- terminal. Northern blot analysis showed that TASK is expressed in a variety of human tissues, with highest levels in pancreas and placenta. Expression of the TASK cDNA revealed that the functional protein creates currents that are K(+)- selective, instantaneous, and noninactivating. These currents showed an outward rectification when external K+ was low, but evinced absence of activation and inactivation kinetics as well as voltage independence, characteristics of so- called leak or background conductances. TASK currents were very sensitive to small changes in extracellular pH, suggesting that TASK has a role in cellular responses to changes in extracellular pH. Lesage and Lazdunski (1998) used a radiation hybrid mapping panel to map the human KCNK3 gene to chromosome 2p23 between markers WI13615 and WI11298. By fluorescence in situ hybridization, Manjunath et al. (1999) mapped the KCNK3 gene to 2p24.1- p23.3 and the mouse homolog to chromosome 5B.

[33842]

[33843] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[33844] Lesage, F.; Lazdunski, M. : Mapping of human potassium channel genes TREK- 1 (KCNK2) and TASK (KCNK3) to chromosomes 1q41 and 2p23. Genomics 51: 478- 479, 1998. ; and

[33845] Manjunath, N. A.; Bray- Ward, P.; Goldstein, S. A. N.; Gallagher, P. G. : Assignment of the 2P domain, acid- sensitive potassium channel OAT1 gene KCNK3 to human chromosome bands 2p24.1- p.

[33846] Further studies establishing the function and utilities of KCNK3 are found in John Hopkins OMIM database record ID 603220, and in cited publications listed in Table 5, which are hereby incorporated by reference.KENAE (Accession NP_789786.1) is another GAM281 target gene, herein designated TARGET GENE. KENAE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KENAE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KENAE BINDING SITE, designated SEQ ID:14862, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33847] Another function of GAM281 is therefore inhibition of KE-

NAE (Accession NP_789786.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KENAE.

[33848] KIAA0063 (Accession NP_055691.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0063 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0063 BINDING SITE, designated SEQ ID:5884, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33849] Another function of GAM281 is therefore inhibition of KIAA0063 (Accession NP_055691.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0063.

[33850] KIAA0082 (Accession NP_055865.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0082 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0082, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0082 BINDING SITE, designated SEQ ID:18751, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33851] Another function of GAM281 is therefore inhibition of KIAA0082 (Accession NP_055865.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0082.

[33852] KIAA0087 (Accession NP_055584.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0087 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0087, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0087 BINDING SITE, designated SEQ ID:10179, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33853] Another function of GAM281 is therefore inhibition of KIAA0087 (Accession NP_055584.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0087.

[33854] KIAA0117 (Accession XP_290939.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0117 BINDING SITE, designated SEQ ID:9255, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33855] Another function of GAM281 is therefore inhibition of KIAA0117 (Accession XP_290939.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0117.

[33856] KIAA0182 (Accession XP_050495.4) is another GAM281 target gene, herein designated TARGET GENE. KIAA0182 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0182, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA0182 BINDING SITE, designated SEQ ID:2218, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33857] Another function of GAM281 is therefore inhibition of KIAA0182 (Accession XP_050495.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0182.

[33858] KIAA0186 (Accession NP_066545.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0186 BINDING SITE, designated SEQ ID:2625, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33859] Another function of GAM281 is therefore inhibition of KIAA0186 (Accession NP_066545.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0186.

[33860] KIAA0205 (Accession NP_055688.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0205 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0205, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0205 BINDING SITE, designated SEQ ID:3429, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33861] Another function of GAM281 is therefore inhibition of KIAA0205 (Accession NP_055688.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0205.

[33862] KIAA0237 (Accession NP_055562.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0237 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0237, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

KIAA0237 BINDING SITE, designated SEQ ID:17386, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33863] Another function of GAM281 is therefore inhibition of KIAA0237 (Accession NP_055562.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0237.

[33864] KIAA0258 (Accession NP_055600.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0258 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0258, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0258 BINDING SITE, designated SEQ ID:9416, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33865] Another function of GAM281 is therefore inhibition of KIAA0258 (Accession NP_055600.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0258.

[33866] KIAA0295 (Accession XP_042833.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA0295 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0295 BINDING SITE, designated SEQ ID:10742, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33867] Another function of GAM281 is therefore inhibition of KIAA0295 (Accession XP_042833.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0295.

[33868] KIAA0318 (Accession XP_044334.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0318 BINDING SITE, designated SEQ ID:13450, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33869] Another function of GAM281 is therefore inhibition of KIAA0318 (Accession XP_044334.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0318.

[33870] KIAA0435 (Accession NP_055616.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0435 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0435, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0435 BINDING SITE, designated SEQ ID:5041, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33871] Another function of GAM281 is therefore inhibition of KIAA0435 (Accession NP_055616.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0435.

[33872] KIAA0446 (Accession XP_044155.1) is another GAM281

target gene, herein designated TARGET GENE. KIAA0446 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0446, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0446 BINDING SITE, designated SEQ ID:1475, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33873] Another function of GAM281 is therefore inhibition of KIAA0446 (Accession XP_044155.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0446.

[33874] KIAA0459 (Accession XP_027862.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0459 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0459 BINDING SITE, designated SEQ ID:4531, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33875] Another function of GAM281 is therefore inhibition of KIAA0459 (Accession XP_027862.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0459.

[33876] KIAA0469 (Accession NP_055666.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0469 BINDING SITE1 and KIAA0469 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0469, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0469 BINDING SITE1 and KIAA0469 BINDING SITE2, designated SEQ ID:9147 and SEQ ID:9493 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33877] Another function of GAM281 is therefore inhibition of KIAA0469 (Accession NP_055666.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0469.

[33878] KIAA0475 (Accession NP_055679.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0475 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0475 BINDING SITE, designated SEQ ID:16940, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33879] Another function of GAM281 is therefore inhibition of KIAA0475 (Accession NP_055679.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0475.

[33880] KIAA0493 (Accession XP_034717.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0493 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0493 BINDING SITE, designated SEQ ID:17206, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33881] Another function of GAM281 is therefore inhibition of KIAA0493 (Accession XP_034717.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0493.

[33882] KIAA0495 (Accession XP_031397.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0495 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0495, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0495 BINDING SITE, designated SEQ ID:14759, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33883] Another function of GAM281 is therefore inhibition of KIAA0495 (Accession XP_031397.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0495.

[33884] KIAA0513 (Accession NP_055547.1) is another GAM281

target gene, herein designated TARGET GENE. KIAA0513 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0513, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0513 BINDING SITE, designated SEQ ID:3931, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33885] Another function of GAM281 is therefore inhibition of KIAA0513 (Accession NP_055547.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0513.

[33886] KIAA0527 (Accession XP_171054.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0527 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0527 BINDING SITE, designated SEQ ID:19745, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33887] Another function of GAM281 is therefore inhibition of KIAA0527 (Accession XP_171054.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0527.

[33888] KIAA0532 (Accession XP_047659.6) is another GAM281 target gene, herein designated TARGET GENE. KIAA0532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0532 BINDING SITE, designated SEQ ID:12455, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33889] Another function of GAM281 is therefore inhibition of KIAA0532 (Accession XP_047659.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0532.

[33890] KIAA0555 (Accession NP_055605.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0555

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0555 BINDING SITE, designated SEQ ID:5555, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33891] Another function of GAM281 is therefore inhibition of KIAA0555 (Accession NP_055605.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0555.

[33892] KIAA0557 (Accession XP_085507.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0557 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0557, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0557 BINDING SITE, designated SEQ ID:2234, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33893] Another function of GAM281 is therefore inhibition of KIAA0557 (Accession XP_085507.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0557.

[33894] KIAA0561 (Accession XP_038150.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA0561 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0561, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0561 BINDING SITE, designated SEQ ID:9629, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33895] Another function of GAM281 is therefore inhibition of KIAA0561 (Accession XP_038150.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0561.

[33896] KIAA0562 (Accession NP_055519.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0562 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA0562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0562 BINDING SITE, designated SEQ ID:16544, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33897] Another function of GAM281 is therefore inhibition of KIAA0562 (Accession NP_055519.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0562.

[33898] KIAA0563 (Accession NP_055649.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0563 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0563 BINDING SITE, designated SEQ ID:16377, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33899] Another function of GAM281 is therefore inhibition of

KIAA0563 (Accession NP_055649.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0563.

[33900] KIAA0682 (Accession NP_055667.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0682 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KIAA0682, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0682 BINDING SITE, designated SEQ ID:6522, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33901] Another function of GAM281 is therefore inhibition of KIAA0682 (Accession NP_055667.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0682.

[33902] KIAA0683 (Accession NP_057195.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0683 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0683, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0683 BINDING SITE, designated SEQ ID:18206, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33903] Another function of GAM281 is therefore inhibition of KIAA0683 (Accession NP_057195.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0683.

[33904] KIAA0831 (Accession NP_055739.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0831 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0831, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0831 BINDING SITE, designated SEQ ID:3260, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33905] Another function of GAM281 is therefore inhibition of KIAA0831 (Accession NP_055739.1) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0831.

[33906] KIAA0841 (Accession XP_049237.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0841 BINDING SITE1 and KIAA0841 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0841, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0841 BINDING SITE1 and KIAA0841 BINDING SITE2, designated SEQ ID:8185 and SEQ ID:5490 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33907] Another function of GAM281 is therefore inhibition of KIAA0841 (Accession XP_049237.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0841.

[33908] KIAA0861 (Accession NP_055893.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA0861 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA0861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0861 BINDING SITE, designated SEQ ID:2153, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33909] Another function of GAM281 is therefore inhibition of KIAA0861 (Accession NP_055893.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0861.

[33910] KIAA0889 (Accession NP_056192.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0889 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KIAA0889, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0889 BINDING SITE, designated SEQ ID:13271, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33911] Another function of GAM281 is therefore inhibition of KIAA0889 (Accession NP_056192.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0889.

[33912] KIAA0924 (Accession NP_055712.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0924 BINDING SITE1 and KIAA0924 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0924, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0924 BINDING SITE1 and KIAA0924 BINDING SITE2, designated SEQ ID:13297 and SEQ ID:7655 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33913] Another function of GAM281 is therefore inhibition of KIAA0924 (Accession NP_055712.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0924.

[33914] KIAA0931 (Accession XP_041191.2) is another GAM281

target gene, herein designated TARGET GENE. KIAA0931 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0931, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0931 BINDING SITE, designated SEQ ID:14272, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33915] Another function of GAM281 is therefore inhibition of KIAA0931 (Accession XP_041191.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0931.

[33916] KIAA0935 (Accession XP_052620.6) is another GAM281 target gene, herein designated TARGET GENE. KIAA0935 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0935, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0935 BINDING SITE, designated SEQ ID:11958, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33917] Another function of GAM281 is therefore inhibition of KIAA0935 (Accession XP_052620.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0935.

[33918] KIAA0962 (Accession XP_290942.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA0962 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0962, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0962 BINDING SITE, designated SEQ ID:8976, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33919] Another function of GAM281 is therefore inhibition of KIAA0962 (Accession XP_290942.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0962.

[33920] KIAA1002 (Accession XP_290584.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1002

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1002, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1002 BINDING SITE, designated SEQ ID:12518, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33921] Another function of GAM281 is therefore inhibition of KIAA1002 (Accession XP_290584.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1002.

[33922] KIAA1032 (Accession XP_038604.4) is another GAM281 target gene, herein designated TARGET GENE. KIAA1032 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1032, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1032 BINDING SITE, designated SEQ ID:1326, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33923] Another function of GAM281 is therefore inhibition of KIAA1032 (Accession XP_038604.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1032.

[33924] KIAA1040 (Accession XP_051091.3) is another GAM281 target gene, herein designated TARGET GENE. KIAA1040 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1040, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1040 BINDING SITE, designated SEQ ID:11846, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.
